Cusp-shaped peaks discovered in the electron spectrum in forward direction from ion-atom collisions at an energy at which the corresponding velocity of electron is equal to the projectile velocity are investigated. Important features (position, shape, half width and its energy dependence) of cusps are studied in the cases of He^{+}, He^{++} - He simple collision systems in the energy range of 0.8-2.4 MeV. The electron energy is analyzed by a special double-pass electrostatic electron spectrometer (ESA-13) with angular acceptance of 1° and energy resolution of 0.3%. Experimental results are compared with theoretical calculations of PWBA method. 7 references, 4 figures. (D.Gy.).

40449 **(INIS-mf—9694) Intensive beam dosimetry of accelerated electrons of low energy.** Oproiu, C. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). 1984. 25p. (In Romanian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701743.

Summary of a doctorate thesis.

Dosimetric control of electron beams ranging between 0.3 MeV and 10 MeV is treated using proper dosimetric methods relying on calorimetry, Tricke chemical solution, dosimetric film of cellulose triacetate. Proper methods are pointed out for measurements in inhomogeneous fields, bringing into evidence the results obtained in deep dose distributions and on the surface of irradiated material. A measuring method of dose distribution in depth by means of an assembly with calorimetric elements, as well as a practical method to pointing out dose distribution and equidose curves along the depth of irradiated electric cable depth are presented. In order to find out the main sizes of accelerated electron beam one uses proper devices relying on Faraday cylinder, total absorption calorimeter, ionization chambers.

40450 **(INIS-mf—9706) Crystal field and magnetocrystalline anisotropy in various crystalline systems.** Adam, S.A. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). 1983. 21p. (In Romanian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701747.

Summary of a doctorate thesis.

Systematic derivation of the one-perticle crystal field Hamiltonians is given for all possible site symmetries in crystals. Distinct parametrizations are found to occur for the eleven Laue-symmetry groups. The functional dependence of the Hamiltonian on the choice of the coordinate axes is also investigated. A general method is developed for the derivation of the one-particle crYstal field potential characteristic of a given crystallographic symmetry, for arbitrary effective interatomic forces. Calculations performed for cubic and hexagonal structures lead to the standard representations in spherical harmonics with the coefficients given, however, by power series of rsup(n) rather than by single rsup(n) terms as obtained within the usual hypothesis of Coulombian interatomic forces. This result has implications on the interpretation of some theoretical and experimental data. Theoretical results are obtained for the crystal field coefficients which enable us to develop an approach to the use of the crystal field data for the derivation of information on the effective interatomic forces in crystals. The method is applied to the magnetic Sm^{3+} ion in $SmCo_5$, and it is shown to provide valuable results both for the effective interatomic potential and for the consistency of various sets of crystal field parameters previously proposed in the literature. Maqnetocrystalline anisotropy of the rare-earth intermetallic compounds are discussed. Single-ion anisotropy model is used for $SmCo_5$ and the theoreticalpr predictions are compared with the experimental data.

From 34. conference on nuclear spectroscopy and nuclear structure; Alma-Ata, USSR (17 Apr 1984).

40452 **(JAERI-M—84-049) Data on ionization, excitation, dissociation and dissociative ionization of targets by helium ion bombardments, (1). Target ionization, excitation, dissociation and dissociative ionization induced by several keV to 3.5 MeV helium ions incident on thin gas targets.** Oda, Nobuo; Urakawa, Junji. (Japan Atomic Energy Research Inst., Tokyo). Mar 1984. 78p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85701741.

This report presents a compilation of the experimental data on cross sections for the ionization, excitation, dissociation and dissociative ionization processes of targets in helium ion impacts on atoms and molecules under a single collision condition. These measurements were carried out in the energy range from several keV to 3.5 MeV. A systematic survey has been made on the literatures from 1975 to the end of 1982. A list of references is also given, including relevant papers published before 1975.

40453 **(JAERI-M—84-069) Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe.** Nakai, Yohta; Shirai, Toshizo; Sataka, Masao; Kikuchi, Akira. (Japan Atomic Energy Research Inst., Tokyo). Apr 1984. 138p. NTIS (US Sales Only), PC A07/MF A01. File Number DE85701742.

This report presents a compilation of the experimental data on cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with inert gases such as He, Ne, Ar, Kr and Xe. A survey has been made systematically of the literatures up to the end of 1983. The cross sections are given as a function of projectile energy in graphs and tables, and a list of references is also attached.

40454 (JINR—D-7-83-644, pp 489-508) **Investigations in atomic physics by heavy ion projectiles.** Berenyi, D. (Magyar Tudomanyos Akademia, Debrecen. Atommag Kutato Intezete). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Investigations in atomic physics by high-energy heavy ions are discussed. The main attention is paid to collision mechanisms (direct Coulomb interaction, quasi-molecular collision mechanism and other models) and the structure of highly ionized and excited atoms. Some problems of fundamental issues (Lamb shift of H-like heavy ions, the superheavy quasi-atoms and the position production in supercritical fields) are conside-- red in detail.

40455 (JINR—D-7-83-644, pp 509-517) **Study on a neon Auger spectrum in ion-atom collisions with neon and argon ions at E=5.6 MeV/nucleon 230.** Varga, D.; Veg, Ya.; Kadar, I.; Rits, Sh.; Shulik, B.; Shchegolev, V.A.; Bereni, D. (Joint Inst. for Nuclear Research, Dubna, USSR). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

K-Auger spectrum of neon in ion-atom collisions with Ne^{+9}, Ne^{+10}, Ar^{+16} and Ar^{+17} ions with the energy E=5.6 MeV/nucleon is investigated. The growth of ion charge brings about a considerable decrease in intensity of lines corresponding to transitions after single ionization of K shell of the ion. The intensity of satellite lines proving multiple ionization of L shell simultaneously rises. The data obtained on the average number of knocked-out electrons prove the linear charge dependence for Ne^{+9}, Ar^{+16} and Ar^{+17}, ions, but ^{+10}Ne ion gives elevated values which is explained to some extent by higher possibility of electron capture for stripped ions.

40456 (JINR—E-14-83-605) **Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals.** Budzynski, M.; Goremychkin, E.A.; Latuszynski, A.; Muehle, E.; Kochetov, O.I.; Muminov, A.I.; Mikolajchak, P.; Subotovicz, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701748.

Electric field gradients at the Gd nuclei in monocrystals of gadolinium and rare earth trifluopides LaF_3, CeF_3, PtF_3, NdF_3, SmF_3, E uF_3, and CdF_3 have been measured by the method of integral perturbed angular correlation. The experimental data have been compared with those of point charge model calculations and with the results of other experiments such as Moessbauer spectroscopy, electron paramagnetic resonance, nuclear trifluorides of the light rare earth elements allow one to conlude that the field gradients cannot be explained within the point charge model. 41 references, 1 figure, 2 tables.

File Number DE85014104.

From International conference on magnetism; San Francisco, CA, USA (26 Aug 1985).

We have observed for the first time conduction-electron mediated muon-impurity coupling, and deduced the strength of the conduction electron-Mn exchange coupling. Our results are marginally consistent with a wave-vector dependent exchange model. 16 refs.

40461 (OUP—83-02) **Energy level shifts in atoms near a metallic plane.** Luetken, C.A.; Ravndal, F. (Oslo Univ. (Norway). Fysisk Inst.). Jan 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701702.

The vacuum fluctuations of the electric field will shift the energy levels of an atom near a neutral conducting plate. These shifts in Rydberg atoms are calculated. The resuls of Casimir and Polder are recovered in the limit where on ignores any permanent dipole moment in the atom. Numerical values for the shifts of the lowest levels are given.

40462 (OUP—84-08) **Introduction to the microscopic theory of giant resonances.** Kuo, T.T.S. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1984. 74p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701705.

The phenomenology of electric multipole giant resoncances (GR) in atomic nuclei is briefly reviewed and discussed in terms of collective variables. Then, the microscopic description of GR is discussed in terms of the Tamm-Dancoff approximation (TDA) and the random-phase approximation (RPA). The TDA and RPA equations are derived by linearization of the equation of motion. The necessary second quantization formalism is briefly summarized. The physical meaning of the TDA and RPA descriptions of GR is illustrated in a simple schematic model. Realistic TDA and RPA calculations of electric dipole and quadrupole GR in light nuclei are reviewed.

40463 (PUC-TN—17/82) **Graphical analysis for Rutherford backscattering spectra.** Barros Leite, C.V. de; Baptista, G.B.; Montenegro, E.C.; Paschoa, A.S. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701706.

A graphical method was developed to relate data from Rutherford Backscattering Spectrometry to sample characteristics, such as thickness and concentration profiles. The method was then applied to analyze characteristics of a gold film.

40464 (PUC-TN—23/82) **Quantum theory of laser radiation scattering by electrons in magnetic fields.** Rochlin, H.; Davidovich, L. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). 1982. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701707.

A system consisting of an electron in a static magnetic field, interacting with the quantized electromagnetic field, within the non-relativistic and electric dipole approximations (with a cutoff in momentum space) is considered. The Heisenberg equations of motion are solved exactly and the time evolution of the electric field is determined. The power spectrum of the scattered radiation is calculated, when the electromagnetic field is initially in a coherent state. The results for the line shape of the scattered radiation are shown to be valid for magnetic fields up to 10^{13}G. The quantization of the electromagnetic field allows one to consider effects of the natural linewidth and its dependence on the magnetic field. The renormalization of the electron mass is included in these treatment, and the results remain finite when the cutoff goes to infinity.

40465 **(UCRL—92231) Positron annihilation and pressure-induced electronic s-d transition.** McMahan, A.K.; Skriver, H.L. (Lawrence Livermore National Lab., CA (USA); Risoe National Lab., Roskilde (Denmark)). Jun 1985. Contract W-7405-ENG-48. 7p. (CONF-850736—16). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014556.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

The polycrystalline, partial annihilation rates for positrons in compressed cesium have been calculated using the linear muffin-tin orbitals method. These results suggest that the pressure-induced electronic s-d transition in Cs should be directly observable by momentum sensitive positron annihilation experiments.

40466 **Optimum extracted negative-ion current densities from tandem high-density systems.** Hiskes, J.R.; Karo, A.M.; Willmann, P.A. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Journal of Applied Physics;* **58**: No. 5, 1759-1764(1 Sep 1985). Contract W-7405-ENG-48.

A tandem high-density hydrogen negative-ion-source system is optimized for the purpose of identifying the maximum possible extracted ion current densities. In the first chamber, vibrational excitation occurs by high-energy electron excitation (E-V process); in the second chamber negative ions are formed by dissociative attachment. The electron, atom, and molecular densities are varied together with the length of the second chamber. Electron excitation cross sections to the B^{1}summation/sub u/ and C^{1}product/sub u/ states are calculated as a function of vibrational excitation. The vibrational excitation approaches an asymptotic value as the first-chamber electron density increases. For a system with scale length R = 10 cm the optimum extracted current densities occur for gas densities near 10^{15} mol cm^{-3} for first-chamber electron densities equal to 10^{13} cm^{-3}, and for second-chamber electron densities in the 4—6 x 10^{12} cm^{-3} range. For atomic densities equal to one-tenth the molecular density and for second-chamber scale lengths as short as Z/R = 0.2, extracted current densities are approximately 30 mA cm^{-2}. As Z/R decreases toward 0.1, the current density is doubled. If the atomic density is increased to one-fifth the molecular density, these current densities are halved; for atomic densities equal to the molecular density, these current densities are reduced by a factor of 6. Applying the system scaling law and varying R from 10 cm toward 1 cm, the extracted current densities tend toward several hundred mA cm^{-2}.

40467 **Electronic states of CuO.** Madhavan, P.V.; Newton, M.D. (Chemistry Department, Brookhaven National Laboratory, Upton, New York 11973). *Journal of Chemical Physics;* **83**: No. 5, 2337-2347(1 Sep 1985).

Ab initio SCF and CI calculations are reported for the ground state and low-lying excited electronic states of CuO (i.e., within ~20 x 10^3 cm^{-1} of the X ^{2}Pi ground state), employing an ab initio effective potential for the Cu atomic core (1s—3p), and including comparisons of several atomic orbital basis sets. The calculated bond lengths, energy separation, and population analyses for the lowest two electronic states, X ^{2}Pi and Y $^2\Sigma^+$ [corresponding roughly to Cu^+ ($3d^{10}$) and O^- ($2p^5$), where the 2p oxygen hole is, repectively, $2p\pi$ and $2p\sigma$], do not vary appreciably among the basis sets tested (minimal and split valence bases on Cu, and a split valence basis on oxygen, with and without d-polarization functions and diffuse p functions on oxygen) and are in reasonable agreement with previous experimental and theoretical estimates. Most of the remaining excited states of CuO below ~20 x 10^3 cm^{-1} may be rationalized in terms of atomic-like excitations originating from the

40468 **Product state distributions for inelastic and reactive H+D$_2$ collisions as functions of collision energy.** Blais, N.C.; Truhlar, D.G. (Chemistry Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **83**: No. 5, 2201-2206(1 Sep 1985).

We have calculated state-to-state reaction cross sections for two new energies and state-to-state vibrationally inelastic cross sections for four energies for H+D$_2$ collisions on the most accurate available potential energy surface. The dynamics calculations are based on the quasiclassical trajectory quadratic smooth sampling method. We present a detailed analysis of the theoretical inelastic and reaction cross sections and compare the trends in the reactive scattering results to those calculated from Gerrity and Valentini's experiments and extrapolations thereof. The agreement between theory and experiment for the reactive scattering at 0.98—1.3 eV relative translational energy is stupendously good.

40469 **Dynamics of inelastic H+D$_2$ collisions: Product quantum state distributions at 1.1 and 1.3 eV collision energy.** Gerrity, D.P.; Valentini, J.J. (Chemistry Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545 and Department of Chemistry, Carroll College, Waukesha, Wisconsin 53186). *Journal of Chemical Physics;* **83**: No. 5, 2207-2213(1 Sep 1985).

We have measured the quantum state distributions of rotationally and vibrationally excited D$_2$ formed in inelastic H+D$_2$ collisions at 1.1 and 1.3 eV, under effectively single-collision conditions. The distributions are derived from highly time-resolved CARS spectra of D$_2$. The hydrogen atoms are generated by laser photolysis of HI in an HI/D$_2$ gas mixture. The D$_2$ produced in these inelastic collisions is less rotationally and vibrationally excited than the HD produced in reactive H+D$_2$ collisions at the same energies. The results also show that at 1.3 eV the H+D$_2$ cross section for producing vibrationally excited D$_2$ is about one-half the cross section for producing vibrationally excited HD. The measured D$_2$ quantum state distributions are in excellent agreement with distributions derived from quasiclassical trajectory calculations on an 'iab initio H$_3$ potential surface. However, the quasiclassical trajectory calculated ratio of the vibrationally inelastic nonreactive cross section to the vibrationally nonadiabatic reactive cross section is about 1.5.

40470 **High current ion source.** Brown, I.G.; Gavin, J.E.; MacGill, R.A. (University of California, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Applied Physics Letters;* **47**: No. 4, 358-360(15 Aug 1985). Contract AC03-76SF00098.

We describe a new kind of ion source using a metal vapor vacuum arc as the plasma formation mechanism. The source is simple and reliable and can produce long pulse intense ion beams from any solid electrically conducting material. Using a range of materials from lithium to uranium we have extracted low divergence beams with ion current up to 1 A.

40471 **Molecular structures and energetics for the lowest triplet states of glyoxal.** Gaw, J.F.; Schaefer H.F. III. (Department of Chemistry and Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **83**: No. 4, 1741-1745(15 Aug 1985).

The equilibrium geometries of the lowest three triplet states of trans glyoxal (HCOHCO) have been predicted at the self-consistent-field (SCF) level of theory using a double zeta plus polarization (DZ+P) basis set, designated C,O(9s5p1d/4s2p1d), H(4s1p/2s1p). Two of the molecular structures thus predicted differ radically from the known ^{1}A/sub g/ ground state equilibrium geometry. Specifically the $\pi \rightarrow \pi^*$ ^{3}B/sub u/ electronic state may be best described by the valence structure :[RW4::xO::].

40472 **Systematic study of molecular anions within the self-consistent-field approximation: OH^-, CN^-, C_2H^-, NH^-_2, and CH^-_3.** Lee, T.J.; Schaefer H.F. III. (Department of Chemistry and Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **83**: No. 4, 1784-1794(15 Aug 1985).

The title molecular anions have been studied at the self-consistent-field (SCF) level of theory with several different basis sets. The smallest of these bases is triple zeta (TZ) in quality while the largest can be labeled near Hartree—Fock limit. The dependence of proton affinities, dipole moments, harmonic frequencies, and infrared intensities on the inclusion of diffuse functions in the basis set is investigated. It is concluded that at the SCF level of theory the addition of diffuse s and p functions (for first row elements) is necessary in order to obtain reliable results. This is true especially for NH^-_2 and CH^-_3. A method to extend any standard Gaussian basis

set is suggested. Finally, predictions are made for some of the as yet unobserved fundamentals of the anions.

40473 General factorization relations and consistency conditions in the sudden approximation via infinite matrix inversion. Chan, C.K.; Hoffman, D.K.; Evans, J.W. (Ames Laboratory and Department of Chemistry, Iowa State University, Ames, Iowa 50011). *Journal of Chemical Physics;* **83**: No. 4, 1637-1647(15 Aug 1985). Contract W-7405-ENG-82.

Local, i.e., multiplicative, operators satisfy well-known linear factorization relations wherein matrix elements (between states associated with a complete set of wave functions) can be obtained as a linear combination of those out of the ground state (the input data). Analytic derivation of factorization relations for general state input data results in singular integral expressions for the coefficients, which can, however, be regularized using consistency conditions between matrix elements out of a single (nonground) state. Similar results hold for suitable "symmetry class" averaged matrix elements where the symmetry class projection operators are "complete." In several cases where the wave functions or projection operators incorporate orthogonal polynomial dependence, we show that the ground state factorization relations have a simplified structure allowing an alternative derivation of the general factorization relations via an infinite matrix inversion procedure. This form is shown to have some advantages over previous versions. In addition, this matrix inversion procedure obtains all consistency conditions (which is not always the case from regularization of singular integrals).

40474 Two-photon spectroscopy of np and nf Rydberg states of atomic iodine. Pratt, S.T. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] A: General Physics;* **32**: No. 2, 928-936(Aug 1985).

The two-photon resonant, three-photon ionization spectrum of atomic iodine in the I(^{2}P/sub 1/2/ state is presented. The I(^{2}P/ sub 1/2/ state is produced by photodissociation of methyl iodide, and its two-photon excitation spectrum exhibits ($^3P_2$)np and ($^3P_2$)nf Rydberg series converging to the I^+ $^2P_2$ ground state. With use of this technique, the single-photon forbidden np and nf series are readily observed to $n>30$.

40475 Photoionization of the excited 3p state of sodium: Experiment and theory. Preses, J.M.; Burkhardt, C.E.; Corey, R.L.; Earsom, D.L.; Daulton, T.L.; Garver, W.P.; Leventhal, a.J.J.; Msezane, A.Z.; Manson, S.T. (Department of Chemistry, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review [Section] A: General Physics;* **32**: No. 2, 1264-1266(Aug 1985).

Measurements of the cross section for photoionization of the excited 3p state of sodium have been made over a significant energy range. Calculations at the central-field and Hartree-Fock levels have also been carried out. Agreement between theory and experiment is excellent.

40476 Further generalization of Landau-Zener calculation. Carroll, C.E.; Hioe, F.T. (Department of Physics, St. John Fisher College, Rochester, New York 14618). *Journal of the Optical Society of America B: Optical Physics;* **2**: No. 8, 1355-1360(Aug 1985). Contract FG02-84ER13243.

A three-level model is used for an atom driven by laser beams of constant amplitude; their detunings are proportional to the time. Simple formulas for the resulting transition probabilities are derived analytically. Special cases of these results are the Landau-Zener result for a two-level model and our earlier result for a symmetrical three-level model.

40477 Transient delayed spectrum of collisionally damped resonance fluorescence in a partially coherent field. Huang, X.Y.; Cresser, J.D.; Eberly, J.H. (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627). *Journal of the Optical Society of America B: Optical Physics;* **2**: No. 8, 1361-1372(Aug 1985).

The time-dependent spectrum of the light scattered by a collisionally damped two-level atom weakly excited off resonance by a partially coherent laser field is evaluated. Both the collisional and the laser noise are treated as classical Markovian, Gaussian processes while, in addition, the atom is assumed to experience damping and fluctuations that are due to its coupling to an unspecified exterior reservoir. The scattered-field spectra are determined both at steady state and at times following the abrupt turn off of the laser field (the delayed spectrum). The distinct contributions to these spectra arising from the various noise sources as well as the finite bandwidth of the detecting interferometer are investigated in each case. Where appropriate, comparisons are made with related work of Saari [Light Scattering in Solids (Plenum; New York, 1979)]. A general inequality is also found that must be satisfied by the longitudinal and the transverse decay rates induced by the exterior reservoir. Finally, the inverse detuning of the laser is found to provide a limit on the time in which the undressing of the atom could be observed to occur following the turn off of the laser.

40478 Bound-free ultraviolet emission from triatomic hydrogen. Raksit, A.B.; Porter, R.F.; Garver, W.P.; Leventhal, J.J. (Department of Chemistry, Cornell University, Ithaca, New York 14853). *Physical Review Letters;* **55**: No. 4, 378-381(22 Jul 1985). Contract FG02-84ER13237.

We report the first observation of an ultraviolet emission continuum attributed to transitions originating in bound Rydberg states of H_3 and terminating on the repulsive ground state.

40479 New mechanism for resonant dtμ formation and epithermal effects in muon-catalyzed fusion. Cohen, J.S.; Leon, M. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 1, 52-55(1 Jul 1985).

A recent muon catalysis experiment with a low-density D-T target saw a pronounced transient in the appearance of fusion neutrons. We propose that this transient is due to resonant molecular formation at epithermal energies. This effect is calculated, including the contribution of direct (as opposed to dipole) mesomolecule formation. The direct process is the dominant one, but has not previously been considered. The results agree well with experiment.

40480 Measurement and analysis of the spectrum of neutral arsenic. Howard, L.H.; Andrew, K.L. (Department of Physics, Purdue University, West Lafayette, Indiana 47907). *Journal of the Optical Society of America B: Optical Physics;* **2**: No. 7, 1032-1077(Jul 1985).

The atomic-emission spectrum of neutral arsenic has been remeasured from 1644 A to 1.2 μm and extended to 3.6 μm. The light source was a microwave-excited electrodeless discharge tube. Instrumentation used included two Fourier spectrometers and a number of concave grating spectrographs. The number of emission lines was increased from the published 333 lines to 1478, 1295 of which are classified as transitions between 95 odd-parity levels and 96 even-parity levels. Of these 191 levels, 104 were the result of this experimental endeavor. Of the previously known 87, 13 were newly classified and 15 reclassified as a result of our analysis. At present, 175 of the 191 levels are classified. The classifications of these levels were accomplished with the help of ab initio calculations and least-squares fitting methods. Designations are given in both LS and JK representation when possible along with calculated compositions in both representations of the levels consisting of less than 75% of a dominant eigenvector component.

40481 Four-photon-resonant third-harmonic generation in Hg. Smith, A.V. (Sandia National Laboratories, Albuquerque, New Mexico 87115). *Optics Letters;* **10**: No. 7, 341-343(Jul 1985). Contract AC04-76DP00789.

A tunable resonant enhancement of third-harmonic and sum-frequency generation is observed at four-photon resonance with the 7^1S, 6^1D, and 6^3D levels and at five-photon resonance with 9^1P levels of atomic mercury. The causes of this resonant enhancement are examined and appear to include a nonlinear refractive index and nonlinear mixing of order 5 and higher. A perturbative treatment of the nonlinearities is found to be inadequate.

40482 Spin-rotation and hfs constants for the X^2u^+ and $B^2\Sigma^+$ states of CaI. Childs, W.J.; Goodman, G.L.; Goodman, L.S.; Pfeufer, V. (Argonne National Lab., IL). *Journal of Molecular Spectroscopy;* 107: 94-107(1984). Contract W-31-109-ENG-38.

The molecular-beam, laser-rf double-response technique is used to obtain precise values for the spin-rotation and hyperfine interaction constants in the $X^2\Sigma^+$ ground state of $^{40}Ca^{127}I$. The measured X-strate splitting information is supplemented by $B \rightleftharpoons X$ optical hfs splitting data to obtain hfs constants for the exicted $B^2\Sigma^+$ state. The results for both states are compared with previously reported values for CaI and other calcium monohalides. 21 references, 3 figures, 4 tables.

40483 Multiconfiguration Hartree-Fock calculations for complex atoms. Fischer, C.F. (Vanderbilt Univ., Nashville, TN). pp 29-56 of Progress in atomic spectroscopy, Part C. Beyer, H.J.; Kleinpoppen, H. (eds.). New York, NY; Plenum Publishing Corporation (1984).

The Hartree-Fock method has become a standard in atomic structure theory. Simpler methods are often compared with it when accessing their reliability or worth and the notion of correlation, which intuitively may be thought of as the correction needed to account for the fact that electrons do not move independently in a central field, is defined with respect to the Hartree-Fock method rather than some other independent-particle model. In fact, in an earlier article in this series, Fricke (Progress in Atomic Spectroscopy, Part A, Plenum Press (1978)), states, "The so-called HF method is the basis of all good atomic calculations." In some sense, the Hartree-Fock method is the best method. The author briefly reviews its properties here. 67 references, 2 figures.

40484 Electronic structure of molecules using relativistic effective core potentials. Hay, P.J. (Los Alamos National Lab., NM). pp 383-401 of Relativistic effects in atoms, molecules, and solids. Malli, G.E. (ed.). New York, NY; Plenum Publishing Corporation (1983).

In this review an approach is outlined for studying molecules containing heavy atoms with the use of relativistic effective core potentials (RECP's). These potentials play the dual roles of (1) replacing the chemically-inert core electrons and (2) incorporating the mass velocity and Darwin term into a one-electron effective potential. This reduces the problem to a valence-electron problem and avoids computation of additional matrix elements involving relativistic operators. The spin-orbit effects are subsequently included using the molecular orbitals derived from the RECP calculation as a basis.

40485 (IFE/KR/E—84/008) Vacuum spark breakdown model based on exploding metal wire phenomena. Haaland, J. (Institute for Energy Technology, Kjeller (Norway)). Jun 1984. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781038.

Spark source mass spectra (SSMS) indicates that ions are extracted from an expanding and decaying plasma. The intensity distribution shows no dependance on vaporization properties of individual elements which indicates explosive vapour formation. This seems further to be a requirement for bridging a vacuum gap. A model including plasma ejection from a superheated anode spot by a process similar to that of an exploding metal wire is proposed. The appearance of hot plasma points in low inductance vacuum sparks can then be explained as exploding micro particles ejected from a final central anode spot. The phenomenological model is compared with available experimental results from literature, but no extensive quantification is attempted.

40486 (LA—10187-MS) Turbulence in two-field incompressible flow. Besnard, D.; Harlow, F.H. (Los Alamos National Lab., NM (USA)). May 1985. Contract W-7405-ENG-36. 113p. NTIS, PC A06/MF A01; GPO Dep. File Number DE85015361.

We derive in this report a model for two-field turbulence. This model gives most of the required features, such as mass diffusion, damping of the turbulence in the second fluid due to the presence of the first one, and decay of the turbulent kinetic energy. We also derive from it a "k-ϵ" model, which could be used for many applications.

40487 (UCRL—92385) Free-Lagrange methods for compressible hydrodynamics in two space dimensions. Crowley, W.P. (Lawrence Livermore National Lab., CA (USA)). 1 Mar 1985. Contract W-7405-ENG-48. 23p. (CONF-8503139—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85012946.

From Free-lagrangian methods conference; Hilton Head Island, SC, USA (4 Mar 1985).

Since 1970 a research and development program in Free-Lagrange methods has been active at Livermore. The initial steps were taken with incompressible flows for simplicity. Since then the effort has been concentrated on compressible flows with shocks in two space dimensions and time. In general, the line integral method has been used to evaluate derivatives and the artificial viscosity method has been used to deal with shocks. Basically, two Free-Lagrange formulations for compressible flows in two space dimensions and time have been tested and both will be described. In method one, all prognostic quantities were node centered and staggered in time. The artificial viscosity was zone centered. One mesh reconnection philosphy was that the mesh should be optimized so that nearest neighbors were connected together. Another was that vertex angles should tend toward equality. In method one, all mesh elements were triangles. In method two, both quadrilateral and triangular mesh elements are permitted. The mesh variables are staggered in space and time as suggested originally by Richtmyer and von Neumann. The mesh reconnection strategy is entirely different in method two. In contrast to the global strategy of nearest neighbors, we now have a more local strategy that reconnects in order to keep the integration time step above a user chosen threshold. An additional strategy reconnects in the vicinity of large relative fluid motions. Mesh reconnection consists of two parts: (1) the tools that permit nodes to be merged and quads to be split into triangles etc. and; (2) the strategy that dictates how and when to use the tools. Both tools and strategies change with time in a continuing effort to expand the capabilities of the method. New ideas are continually being tried and evaluated. The successful ones stay in the code, and in some sense its intelligence increases with time. 7 refs., 13 figs.

40488 (UCRL—92921) Shock temperature measurements in ammonia. Radousky, H.B.; Mitchell, A.C.; Nellis, W.J.; Ross, M. (Lawrence Livermore National Lab., CA (USA)). Jul 1985. Contract W-7405-ENG-48. 7p. (CONF-850736—27). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014810.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

Our first shock temperature measurements on a cryogenic target are reported for NH_3. A new fast optical pyrometer and a cryogenic specimen holder for liquid NH_3 were developed to measure shock temperatures of 4400 and 3600 K at pressures of 61 and 48 GPa. These conditions correspond to those in the ice layers in Uranus and Neptune. The shock temperature data are in reasonable agreement with an equation of state based on an intermolecular potential derived from NH_3 Hugoniot data.

40489 (UCRL—92924) Fluids at high dynamic pressures and temperatures. Nellis, W.J.; Hamilton, D.C.; Trainor, R.J.; Radousky, H.B.; Mitchell, A.C.; Holmes, N.C. (Lawrence Livermore National Lab., CA (USA)). Jun 1985. Contract W-7405-ENG-48. 10p. (CONF-850759—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014812.

From 10. high pressure conference on research in high pressure science and technology; Amsterdam, Netherlands (8 Jul 1985).

Electrical conductivity data for shocked liquid nitrogen, Hugoniot data for liquid air, shock temperatures for liquid ammonia, and double-shock equation-of-state data for Al are discussed. 15 refs., 2 figs.

40490 **Gas flow in vertical slots with large horizontal temperature differences.** Chenoweth, D.R.; Paolucci, S. (Applied Mechanics Department, Sandia National Laboratories, Livermore, California 94550). *Physics of Fluids;* **28**: No. 8, 2365-2374(Aug 1985). Contract AC04-76DP00789.

Perfect gas exact solutions to the steady Navier—Stokes equations are given for laminar convective motion in open and closed vertical slots with large temperature differences using Sutherland law transport properties. The solutions are valid a few slot widths away from the ends in the asymptotic region where the opposite hot and cold wall boundary layers are fully merged. It is found that the static pressure (in the closed slot) and temperature and velocity distributions (in all cases) are very sensitive to property variations, even though the heat flux may not be. We observe the net horizontal and vertical heat fluxes to be the same as those obtained from the Boussinesq equations. Comparisons with constant property solutions and the well-known Boussinesq limiting solution for small temperature differences are given for examples using air.

40491 **Fragmentation of suddenly heated liquids.** Blink, J.A.; Hoover, W.G. (Lawrence Livermore National Laboratory, Livermore, California 94550 and Department of Applied Science, University of California, Davis, California 95616). *Physical Review* [*Section*] *A: General Physics;* **32**: No. 2, 1027-1035(Aug 1985). Contract W-7405-ENG-48.

The rapid fragmentation of two-dimensional high-pressure disks of Lennard-Jones fluid was studied using molecular dynamics. The free expansion of 169-, 721-, 2611-, and 14 491-particle systems was studied for several sound-traversal times. The breakup into fragments (or clusters) can be roughly described by Grady's model, which balances the surface energy with the comoving (dilational) kinetic energy of the fragments. The model predicts that the number of fragments varies as the cube root of the system population and the 2D/3 power of the initial pressure where D (2 or 3) is the dimensionality of the system. The molecular-dynamics results confirm these predictions within about +- 0.1 and thereby rule out three other fragmentation models. The relatively high monomer temperatures and relatively uniform fragment temperatures found here correspond to temperatures found in recent three-dimensional Lennard-Jones simulations by Vicentini, Jacucci, and Pandharipande.

40492 **Coupling of Rayleigh-like waves with zero-sound modes in normal ^{3}He.** Bogacz, S.A.; Ketterson, J.B. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, Illinois, and Department of Physics and Astronomy, Southern Illinois University, Carbondale, Illinois). *Journal of Low Temperature Physics;* **60**: No. 1, 133-148(1 Jul 1985).

The Landau kinetic equation is solved in the collisionless regime for a sample of normal ^{3}He excited by a surface perturbation of arbitrary ω and k. The boundary condition for the nonequilibrium particle distribution is determined for the case of specular reflection of the elementary excitations at the interface. Using the above solution, the energy flux through the boundary is obtained as a function of the surface wave velocity ω/k. The absorption spectrum and its frequency derivative are calculated numerically for typical values of temperature and pressure. The spectrum displays a sharp, resonant-like maximum concentrated at the longitudinal sound velocity and a sharp maximum of the derivative concentrated at the transverse sound velocity. The energy transfer is cut off discontinuously below the Fermi velocity. An experimental measurement of the energy transfer spectrum would permit a determination of both zero-sound velocities and the Fermi velocity with spectroscopic precision.

40493 **Nodal coarse-mesh method for the efficient numerical solution of laminar flow problems.** Horak, W.C.; Dorning, J.J. (Brookhaven National Laboratory, Department of Nuclear Energy, Upton, New York 11973). *Journal of Computational Physics;* **59**: No. 3, 405-440(Jul 1985).

A coarse-mesh nodal method for the efficient numerical solution of incompressible laminar flow problems is developed using a transverse integration procedure followed by the introduction of locally-defined Green's tensors of the transverse-integrated in-node Navier-Stokes and mass conservation equations. In applications to 2-dimensional flow problems, including fully developed flow, inlet flow, and modified driven cavity problems (driven cavities with inlet and outlet sections), this new nodal Green's tensor method is demonstrated to have very high accuracy even when applied on very large nodes. The high accuracy of this new method on very coarse meshes leads to a high computational efficiency (reduced computer time for fixed accuracy requirements).

40494 **Efficient solution algorithms for the Riemann problem for real gases.** Colella, P.; Glaz, H.M. (Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Computational Physics;* **59**: No. 1, 264-298(Jun 1985). Contract AC03-76SF00098.

A procedure for constructing solutions to the Riemann problem for gas dynamics with a general convex equation of state is given. Approximate procedures, involving a local parametrization of the equation of state, are introduced in order to calculate numerical fluxes in conservative finite difference schemes. This leads to difference schemes which are as accurate and almost as fast as the analogous schemes for polytropic gases. Numerical results in one and two space variables are presented.

40495 **Oscillatory convection in a dilute ^{3}He—superfluid ^{4}He solution.** Maeno, Y.; Haucke, H.; Ecke, R.E.; Wheatly, J.C. (Los Alamos National Laboratory, Los Alamos, New Mexico). *Journal of Low Temperature Physics;* **59**: No. 3, 305-346(1 May 1985).

Convective instabilities in a rectangular, unity-aspect-ratio Rayleigh-Benard cell with a solution of 1.46% ^{3}He in superfluid ^{4}He have been studied in the temperature range 0.70—1.05 K, with a corresponding Prandtl number range of $0.045<\sigma<0.15$. The onset of stationary convection is much like that in a classical, one-component fluid. The oscillatory instability is studied by using an extremely sensitive local temperature probe. It is found that the total heat transport efficiency is suppressed by the oscillations in the entire range of Prandtl number we have studied. The local temperature probe indicates a striking difference in the oscillatory amplitude when the sense of rotation of the convective rolls is reversed. The magnitude of the convective velocity is deduced from both th initial slope of the Nusselt number near the onset of the stationary convection and the frequency of the oscillations. Determinations of the temperature dependence of the convective velocity using these two methods agree very well. The observed behavior of the oscillatory frequency and onset condition supports the theory of oscillatory convection for a classical, low-Prandtl-number, one-component fluid.

40496 **(DOE/ER/02504—T3) High energy accelerator and colliding beam user group. Progress report, March 1, 1983-February 29, 1984.** (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). 1983. Contract AC05-76ER02504. 169p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE85014511.

Topics covered in this research summary include: status of the OPAL collaboration at LEP, CERN; two-photon physics at PLUTO; search for new particles at JADE; neutrinoless double beta decay at DESY; Fermilab jet experiment; neutrino deuterium experiment in the 15 foot bubble chamber at Fermilab; deep inelastic muon experiment at Fermilab; new experiments at the proton-antiproton collider; neutrino-electron scattering at Los Alamos; parity violation in proton-proton scattering; an upgrade of laboratory and computer facilities; and a study of bismuth germanate as a durable scintillation crystal. (GHT)

40497 **(INIS-mf—9311) Workshop on the future of intermediate energy physics in Europe. Proceedings.** Koch, H.; Scheck, F. (eds.). (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekttraegerschaft Mittelenergiephysik). 1984. 491p. (CONF-8404243—). NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453.

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

These proceedings contain the reviews, lectures, and articles presented at the named workshop. These concern weak interactions of hadrons, CP violation in the standard model and beyond, flavor mixing with CP violation, radiative weak decays, kaon and hyperon decays, electroweak interactions and neutrino physics, heavy neutrinos, the study of electroweak processes by the spallation neutron source, radiative corrections in the standard model, physics with proton, pion, and antiproton beams, charm, bottom, and Higgs search, wide angle hadron scattering, panti p physics above 2 GeV/c, strong interactions with strange particles, the lifetime of hypernuclei, electromagnetic probing of hadron structure and nuclear constituents, accelerators, as well as a kaon factory project. See hints under the relevant topics.

40498 **(LA—10429-PR) Progress at LAMPF, Clinton P. Anderson Meson Physics Facility, January-December 1984.** Allred, J.C. (ed.). (Los Alamos National Lab., NM (USA)). Apr 1985. Contract W-7405-ENG-36. 260p. NTIS, PC A12/MF A01; GPO Dep. File Number DE85015365.

Progress at LAMPF is the annual progress report of the MP Division of the Los Alamos National Laboratory. The report includes brief reports on research done at LAMPF by researchers from other institutions and Los Alamos divisions. Abstracts of separate sections of the report were prepared separately for the data base. (GHT)

40499 **(ANL-HEP-CP—85-18) Summary of S = 0 dibaryon resonances and candidates.** Yokosawa, A. (Argonne National Lab., IL (USA)). 18 Apr 1985. Contract W-31-109-ENG-38. 46p. (CONF-8503146—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE85012125.

From San Miniato topical seminar; San Miniato, Italy (25 Mar 1985).

Experimental data concerning S = O dibaryon resonances are reviewed, with an emphasis on the nucleon-nucelon system. Structures observed in the γd channel, the πd elastic scattering, pp $\rightarrow \pi$d channel, and other channels are discussed. Experimental data are compared with various theories. The short-range forces can be represented by dibaryon resonances. Further measurements to clarify the understanding of dibaryons are also discussed. 53 refs., 24 figs.

40500 **(BNL—36726) Brief report on a new limit on the strength of mixing between nu/sub μ/ $\rightarrow$ nu/sub e/.** Ahrens, L.A.; Aronson, S.H.; Connolly, P.L.; Gibbard, B.G.; Murtagh, M.J.; Murtagh, S.; Terada, S.; White, D.H.; Callas, J.L.; Cutts, D. (Brookhaven National Lab., Upton, NY (USA); Brown Univ., Providence, RI (USA); National Lab. for High Energy Physics, Oho, Ibaraki (Japan); Osaka Univ. (Japan); Pennsylvania Univ., Philadelphia (USA); State Univ. of New York, Stony Brook (USA)). 1985. Contract AC02-76CH00016. 4p. (CONF-850375—15). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015183.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

Measurements have been made of the reactions nu/sub e/n $\rightarrow e^- p$ and nu/sub μ/n $\rightarrow \mu^- p$ in a detector located 96 meters from the A.G.S. neutrino source. A direct measurement is made of the energy dependent flux ratio for the two neutrino species. After comparison to calculated energy dependence of this same ratio, an improved new limit of $\sin^2 2\alpha < 3.4 \times 10^{-3}$ (90% CL) at large Δm^2 is obtained. Possible systematic errors are estimated to be less than 20%. 5 refs., 5 figs.

40501 **(CERN-EP—84-85) p anti p annihilations at rest in hydrogen gas: report on preliminary results of the ASTERIX experiment at LEAR.** Ahmad, S.; Amsler, C.; Armenteros, R.; Auld, E.G.; Axen, D.; Bailey, D.; Barlag, S.; Beer, G.; Bizot, J.C.; Caria, M. (European Organization for Nuclear Research, Geneva (Switzerland); Mainz Univ. (Germany, F.R.); Technische Univ. Muenchen (Germany, F.R.); Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire; British Columbia Univ., Vancouver (Canada). TRIUMF Facility; Zurich Univ. (Switzerland)). 18 Jul 1984. 14p. (CONF-840379—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85901050.

From 4. course on fundamental interactions in low energy systems; Erice, Italy (31 Mar 1984).

The ASTERIX experiment has been set up to study p anti p annihilations at rest into q anti q-mesons and other boson resonances. The experimental set-up is briefly described, followed by some preliminary experimental results. It is reported that the 2P level of the p anti p atom is reached in the atomic cascade in H_2 gas. In fully reconstructed annihilation channels involving, besides charged particles, 0 or 1 neutral particle, well known mesons are observed at their nominal masses. A continuous change in relative branching ratios was found, leading to the conclusion that one has 10 to 40% S wave and 60 to 90% P wave annihilation in atmospheric H_2 gas. (LEW)

40502 **(DESY—85-012) Consequences of models for monojet events from Z boson decay.** Baer, H.; Komamiya, S.; Hagiwara, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752017.

Three models for monojet events with large missing transverse momentum observed at the CERN p anti p collider are studied: i) Z decay into a neutral lepton pair where one of the pair decays within the detecter while the other escapes, ii) Z decay into two distinct neutral scalars where the lighter one is long lived, and iii) Z decay into two distinct higgsinos where the lighter one is long lived. The first model necessarily gives observable decay in flight signals. Consequences of the latter two models are investigated in both panti p collisions at CERN and e^+e^- annihilation at PETRA/PEP energies.

40503 **(DOE/ER/03130—25) Progress report of a research program in experimental high energy physics, January 1, 1985-December 31, 1985. Task C.** Lanou, R.E. Jr. (Brown Univ., Providence, RI (USA). Dept. of Physics). 1 Jul 1985. Contract AC02-76ER03130. 68p. (COO—3130TC-25). NTIS, PC A04/MF A01; GPO Dep. File Number DE85014448.

An experimental program in strong and electro-weak interaction physics of elementary particles is being carried out using electronic detection techniques. Experiments have been performed or are being prepared utilizing the accelerators of the laboratories at Brookhaven and Fermilab. The experiments described in this report by the Electronic Detector Group include the following: (1) experiments to measure neutrino-electron scattering and other neutral current phenomena, (2) neutrino oscillation experiments at BNL, and (3) preparations for experiments at the FNAL anti PP Collider.

40504 **(DOE/ER/03130—259) Experimental high energy physics. Progress report, 1 January 1985-31 December 1985.** Widgoff, M. (Brown Univ., Providence, RI (USA)). 1 Jul 1985. Contract AC02-76ER03130. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE85014447.

An experimental program to study the interactions of hadrons, photons, and neutrinos is being carried out using hybrid systems which include bubble chambers as visible targets and counter spectrometers for particle detection, identification, and momentum measurements. Experiments have been run in both positive and negative hadron beams at Fermilab and with polarized photons at SLAC. Experiments with neutrino beams at Tevatron II at Fermilab are in progress and in preparation. In addition, we have joined in a collaboration to submit a Letter of Intent to build a detector for experiments at the new ep colliding beam accelerator HERA at

DESY. We have been analyzing the film and counter data of our one-million-picture exposure for the study of π^+, K^+ and p interactions in hydrogen and magnesium, silver and gold, at a beam momentum of 200 GeV/c (FNAL Experiments E-565 and E-570), as well as continuing the physics analysis of our earlier FNAL experiments on π^+ p, K^+ p and pp interactions at 147 GeV/c (FNAL Experiment E-299). During the past year analysis has continued on the data of SLAC experiments BC72/73/75, studying the interactions in hydrogen of 20 GeV polarized photons. Results have been obtained on photoproduction of charm and on the lifetimes of charmed particles, and on vector meson and strange particle production. Inclusive γp interactions are being studied in detail in this high statistics sample. The hybrid detector for neutrino studies at Tevatron II is operating at Fermilab, as a test for E636, the tau neutrino search to be run in a neutrino beam from a beam dump, and we are collecting data on muon neutrino interactions in the high Q^2 region made accessible for the first time by the Tevatron (E745). Brown built scintillator hodoscopes for the trigger system of the detector. Data including holographic photographs of the Tohoku one-meter bubble chamber are being obtained, and film analysis has begun.

40505 **(DOE/ER/03244—110) Investigation of the anti pp → xi (2220) → K/sub s/K/sub s/ reaction at LEAR.** Hertzog, D.W. (Carnegie-Mellon Univ., Pittsburgh, PA (USA)). 1985. Contract AC02-76ER03244. 6p. (CONF-850152—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014325.

From 3. LEAR workshop; Tignes-Savoie, France (19 Jan 1985).

Measurement of the total and differential cross section of the reaction anti pp → K/sub s/K/sub s/ in a fine momentum scan corresponding to the mass range of the ξ (2220) was proposed. The mass and width of such a resonance coupling to anti pp can be determined to better than 500 keV and additionally the spin can be established from the differential cross section. Only modest additions to our existing threshold detector and antiproton beam intensities currently available at LEAR are required for these studies. 14 refs.

40506 **(DOE/ER/03244—111) Strange particle production in anti PP annihilation processes.** Barnes, P.D. (Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). 1985. Contract AC02-76ER03244. 11p. (CONF-850315—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014326.

From Conference on antinucleon and nucleon-nucleus interactions; Telluride, CO, USA (18 Mar 1985).

Nucleon-Antinucleon annihilation is inherently a short range (≦ 1 f.) process involving a spatial overlap of the two hadrons. This feature has stimulated much theoretical interest in this process as a testing ground for models of the underlying quark degrees of freedom. Microscopic models have been proposed to describe annihilation into both two and three meson final states, in both strange and nonstrange channels, and into nonmesonic two hyperon final states. The main issues in the analysis of mesonic final states are reviewed. A new investigation at LEAR of anti ΛΛ production in anti PP collisions near threshold is discussed. A proposed study of the reaction anti PP → K/sub s/K/sub s/ is described in the context of a search for the ξ(2220) resonance.

40507 **(DOE/ER/03244—113) Search for a strangeness -2 dibaryon.** Franklin, G.B. (Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). 1985. Contract AC02-76ER03244. 6p. (CONF-8504133—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014328.

From International conference on hadron spectroscopy; College Park, MD, USA (20 Apr 1985).

The existing data on the strangeness -2 two-baryon mass spectrum is reviewed and a new experiment is proposed to explore this spectrum from 100 MeV below the mass of the lightest known two-baryon strangeness -2 system, ΛΛ, to 20 MeV above the ΛΛ mass. The proposed experiment is motivated by Jaffe's 1977 prediction of a six-quark object with strangeness -2 and J/sup π/ = 0^+ at a mass of 2150. This particle, called the "H", has been predicted by later bag models as well. Calculations indicate the proposed experiment will be a sensitive test of the dibaryon theories. 12 refs.

40508 **(DOE/ER/03244—114) Search for the xi(2220) at LEAR.** Hertzog, D.W.; Barnes, P.D.; Diebold, G.E.; Franklin, G.; Maher, C.; Quinn, B.; Seydoux, J.; Szymanski, J.; Kilian, K.; Besold, R. (Carnegie-Mellon Univ., Pittsburgh, PA (USA); European Organization for Nuclear Research, Geneva (Switzerland); Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.); Freiburg Univ. (Germany, F.R.); Illinois Univ., Urbana (USA); Rice Univ., Houston, TX (USA). Bonner Nuclear Labs.). 1985. Contract AC02-76ER03244. 6p. (CONF-8504133—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014329.

From International conference on hadron spectroscopy; College Park, MD, USA (20 Apr 1985).

Since the revelation of the narrow resonance at 2220 MeV in the K anti K final states of the radiative decay J/Psi-δX at SLAC, much theoretical and experimental effort has been devoted to the understanding of this unusual object. Theoretical explanations range from the conventional to the exotic. The experimental evidence, however, rests solely on one experiment and is not of sufficient quality to distinguish among the intriguing possibilities. We describe an experiment which would be ideal to measure precisely the properties of the ξ, including its mass, width, and angular momentum.

40509 **(DOE/ER/40025—36) Charm and heavy flavor lifetimes.** Ford, W.T. (Colorado Univ., Boulder (USA). Dept. of Physics). Mar 1985. Contract AC02-81ER40025. 33p. (CONF-850146—8). NTIS, PC A03/MF A01; GPO Dep. File Number DE85014901.

From Aspen winter physics conference; Aspen, CO, USA (14 Jan 1985).

Recent measurements of the lifetimes of charm and bottom hadrons and of the tau lepton are reviewed. The current status of weak interaction universality, flavor mixing and models relating quark to hadron decay are discussed. 25 refs., 11 figs.

40510 **(DOE/ER/40033—78) Range of validity of KNO scaling.** Belforte, S.; Goulianos, K. (Rockefeller Univ., New York (USA)). 1985. Contract AC02-81ER40033. 5p. (CONF-850375—9). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85013596.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

When diffractive and non-diffractive charged multiplicity distributions are considered independently, we find that KNO-scaling extends from a few GeV to at least ~60 GeV, and possibly even to the SppS Collider energy of 540 GeV.

40511 **(EFI—615(5)-83) Analysis of cumulative proton angular distributions.** Alanakyan, K.V.; Demirchyan, R.A.; Egiyan, K.Sh.; Sharabyan, Yu.G.; Stepanyan, S.G. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701790.

An analysis of angular distributions of cumulative protons produced by primary γ-quanta and hadrons is presented. It is shown that these distributions: 1) are successfully described by the exponential dependence fsub(p)(cosnusub(p)) = Cexp(bsub(p)cosnusub(p)); 2) strongly depend on proton momenta; 3) are universal with respect to primary energy beginning with approximately 1 GeV for light particles (γ-quanta and π-mesons) and with 2-3 GeV for protons; 4) are universal with respect to the target-nucleus beginning with 50; 5) all other conditions being equal, they are identical for primary light particles (γ-quanta and π-mesons) and come to be steeper for primary protons. The analysis of angular distributions of cumulative protons at Tsub(p) = 0 shows that energy spectra of these protons interest at energies Tsub(p) not equal to 0, the crossover point on a scale of Tsup(p) being essentially dependent on the interaction type, target-nucleus and primary energy. 15 references, 59 figures.

40512 **(EFI—624(14)-83) Cross-section assymmtry of πi and π^- meson single photoproduction on nucleons by polarized photons in the resonance energy range.** Agababyan, K.Sh.; Agan'yants, A.O.; Adamyan, F.V. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701791.

Preliminary measurement results for the cross-section asymmetry of the reaction $\gamma n \rightarrow \pi^- p$ in the range of angles thetasub(πsup(-))sup(c.m.s.) = 50 deg - 120 deg at Esub(γ) = 1.05 GeV as well as the cross-section asymmetry of the reaction $\gamma p \rightarrow \pi^+ n$ for the angles thetasub(πsup(+))sup(c.m.s.) = 50 deg, 60 deg at Esub(γ) = 1.05 GeV are presented. The experiment is performed on the linearly polarized photon beam of the Yerevan synchrotron. 12 references, 3 figures, 2 tables.

40513 (EFI—643(33)-83) Observation of correlations between backward-protons yield and relative yield of $\pi i/\pi^-$-mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon. Gulkanyan, G.R.; Kirakosyan, Z.A.; Korchagin, S.A; Ravinovich, I.M. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701792.

The correlation between the ratio of momentum spectra of low-energy π^{+-}-mesons (Psub(π)=100-500 MeV/c) and production of backward-protons in the interactions of p, d, He, with ^{12}C at 4.2 GeV/c momentum per nucleon is investigated. Experimental results indicate that a noticeable contribution in the process of backward-proton production is made by the secondary π^+-meson absorption on a pair of nucleons in nucleus (in the momentum range of Psub(π) = 150-250 MeV/c). 7 references, 3 figures.

40514 (FNAL/C—85/84) p anti p collider physics: summary talk. Bjorken, J.D. (Fermi National Accelerator Lab., Batavia, IL (USA)). Jun 1985. Contract AC02-76CH03000. 24p. (CONF-8503151—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014782.

From International symposium on physics of proton-antiproton collision; Tsukuba, Japan (13 Mar 1985).

Progress is very briefly summarized in these areas: Drell-Yan production of W and Z; inclusive spectra of jets; angular distribution of two jet final states; Dalitz plot analysis of three jet final states; interior structure of jets; minijets; issues and relevent data in soft-collision physics; structure of the pomeron; W, Z, and electroweak theory; heavy quark physics; extinct exotica; extant exotica, including monojets, the top quark, and possibly anomalous same-sign isolated dimuons. Future directions are anticipated for the Sp anti pS, Tevatron I, instrumentation and detectors, group theory, and the physics at SSC energies. 39 refs., 18 figs. (LEW)

40515 (IAE—3739/2) Experiments on the search for magnetic monopoles. Kotov, M.A.; Ogurtsov, V.V.; Filippov, A.A.; Khakimov, S.Kh. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 32p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701786.

Experiments on the search for magnetic monopoles in cosmic radiation, in different substances on the Earth and at accelerators are described. It is noted that the flux of cosmic monopoles is very small and its reliable registration requires too much effort. At the same time there are ferromagnetic materials on the Earth that could accumulate monopoles for millions of years. The upper limit of the flux of cosmic monopoles is estimated. Experiments at accelerators that constitute the most numerable group of investigations are discussed. The evaluations of upper boundary of cross section for birth of monopoles by accelerated particle fluxes are estimated. 36 references, 14 figures, 2 tables.

40516 (IFVE—84-54) Charged particle multiplicity in K^+p interactions at 70 GeV/c. Gritsaenko, I.A.; Ron'zhin, V.M.; Fenyuk, A.B.; Shlyapnikov, P.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 8p. (In Russian). (OEIPK-WA—27). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701797.

Results are presented on the charged particle multiplicity in the K^+p interactions at 70 GeV/c obtained in the experiment with the bubble chamber BEBC. They are compared with other K^+p experiments in the momentum range from 3 up to 250 GeV/c. 13 references, 5 figures, 3 tables.

40517 (IFVE-OEF—84-97) Total hadron interaction cross section growth. Prokoshkin, Yu.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701793.

The energy dependence of total cross sections of hadron interactions at high energies is considered. The growing, non-Regge part of the total cross section exhibits the universality, it does not depend on the type of a particle. The features of the total cross sections are discussed in connection with the hypothesis on the gluonic nature of the cross section growth. 21 references, 4 figures, 3 tables.

40518 (IFVE-OEF—84-98) Exclusive production and decay of glueballs. Prokoshkin, Yu.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701794.

Possibilities to separate glueballs from the background of quark meson states are discussed. The experimental method is considered in which glueball signal is enchanced both in the production reaction (in the central collision region) and in the decay process into pseudoscalar mesons. The peculiarities of the detection of multiphoton final states produced in glueball decays, Using GAMS-type spectrometer, at energies near the threshold and in the TeV-range are discussed. 34 references, 7 figures.

40519 (IFVE-ONF—83-143) Compton effect on πp meson. Antipov, Yu.R.; Batarin, V.A.; Bezzubov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 14p. (In Russian). (SERP-E—143). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701795.

The reaction $\pi^- A \rightarrow A\pi^-\gamma$ at 40 GeV/c was studied on the Sigma spectrometer on Be, C, Al, Fe, Cu, Pb nuclear targets in the range of four-momentum transfer excitation < 0.05 (GeV/c)^2. A phenomenon of elastic scattering of pions on the nuclear Coulomb field photons was observed, its total and differential cross sections were measured. The cross section of compton effect on π^--meson was determined. 14 references, 10 figures.

40520 (IFVE-ONF—83-173) Properties of multiplicity distributions in nuA and antinuA interactions at Esub((anti nu)) <= 30 GeV. Baranov, D.S.; Chabrov, N.A.; Filippov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701787.

We present data on the multiplicity structure of inclusive charge hadron production in charged current neutrino and antineutrino freon interactions in the energy range of 3-30 GeV. Average multiplicities, dispersions and correlation coefficients are investigated. Furthermore, KNO-scaling is studied and average net charges are calculated in different kinematical regions. Our data are compared with results from interactions on an isoscalar target of free nucleons with the view to study the influence of nuclear effects. 20 references, 11 figures, 2 tables.

40521 (IFVE-ONF—84-69) Estimate of hadron formation length in neutrino interactions. Baranov, D.S.; Ermolaev, V.I.; Ivanilov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701788.

The formation length of hadrons produced in neutrino interactions in the framework of the intranuclear cascade model using the data on proton multiplicity is estimated. It follows from this estimate that hadrons with an energy greater than several GeV escape the nucleus without interaction. The experiment was done on the bubble chamber SCAT filled with freon (CF_3Br). A cascade model, where the formation length of neutrino produced hadrons is taken into account, is in agreement with the experimental data, in

particular with the cumulative proton emission. 33 references, 3 figures, 2 tables.

40522 **(IFVE-OTF—84-85) Spin effects in hadron interactions at high energies.** Troshin, S.M.; Tyurin, N.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701796.

Spin effects in π^{+-}, K^{+-}p, pp inelastic scattering and in inclusive hyperon production in hadron interactions at high energies are discussed. Theoretical approaches to the description of these effects are also considered. 35 references, 6 figures, 3 tables.

40523 (INIS-mf—9311, pp 98-101) **Experimental status and prospects of flavour mixing and CP violation.** Kleinknecht, K. (Dortmund Univ. (Germany, F.R.). Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

The mixing of quarks through the weak interaction is described by a unitary matrix which can be parametrized in terms of three angles and one phase. Experimental results on weak decays of hyperons and B mesons, on neutrino production of charm quarks, and on the B meson lifetime are used to obtain, in a combined fit, values for the three mixing angles in the Kobayashi-Maskawa scheme: sin theta$_1$ = 0.231 +- 0.003, 0.025 < sin theta$_3$ < 0.06 and sin theta$_3$ +- 0.02. In the Maiani parametrization, the angles obtained are: sin theta = 0.231 +- 0.003, vertical strokesin γvertical stroke=0.044 (+0.007 -0.005) and sin β < 0.004. Future prospects for experiments on flavour mixing and CP violation are discussed.

40524 (INIS-mf—9311, pp 105-109) **Experimental aspects of kaon and hyperon decays.** Siebert, H.W. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

In this lecture I give a necessarily incomplete picture of the achievements and future possibilities of experiments on kaon and hyperon decays. The emphasis here is on decays of charged kaons, which will be treated in part I, while part II will deal with hyperon decays.

40525 (INIS-mf—9311, pp 85-91) **Status and outlook in searches for heavy neutrinos.** Deutsch, J. 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

We elaborated somewhat on the opinion that the up-to-now so successful standard model is rather unsatisfactory to the extent that it does not offer any natural explanation to the mass-spectrum of the particles and - in particular - to the ad-hoc assumption of strictly zero-mass neutrinos. Aesthetical prejudice and even the very idea of grand unification would call instead for a finite neutrino mass without offering, unfortunately, any unique prediction on the mass-values to be expected. Under these circumstances, the only reasonable attitude for the experimentalist seems to consist in pushing further the mass-limits whenever this becomes technically feasible, searching for eventual hints of a world beyond the standard model.

40526 (INIS-mf—9311, pp 102-104) **Electroweak processes at a neutron spallation source.** Radermacher, E. (Technische Hochschule Aachen (Germany, F.R.). Lehrstuhl fuer Experimentalphysik 3B und 3. Physikalisches Inst.). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

We are restricted to neutrino interactions when electroweak processes should be studied at a neutron spallation source (Rutherford, Juelich), or some other meson factory (Lampf, SIN, Triumph).

40527 **(ITEP—39(1983)) Measurement of np elastic scattering at high energies and very small momentum transfers.** Arefiev, A.; Babaev, A.; Bamberger, A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 52p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701798.

The np elastic scattering differential cross section has been measured for incident neutron momenta 100-400 GeV/c in the t range 6 x 10^{-4} - 5 x 10^{-1} (GeV/c)^2. The np-data of this experiment provide a direct measurement of the hadronic amplitude for t < 10^{-2} (GeV/c)^2, which is consistent with the extrapolations from higher t values. In data obtained for t < 10^{-4} (GeV/c)^2 there is an indication of a rise which can be attributed to Schwinger scattering. There are obtained σsub(tot)sup(np) = (39.6 +- 0.6) mb and σsub(el)sup(np) = (7.05 +- 0.22) mb at <p> = 310 GeV/c, where <p> is a mean laboratory momentum. This gives a ratio σsub(el)sup(np)/σsub(tot)sup(np) = 0.178 +- 0.008, which is in good agreement with pp-data at ISR energies. 12 references, 20 figures.

40528 **(ITEP—110(1983)) Ratio of the x-distributions for antineutrino interactions in neon and deuterium.** Astratyan, A.E.; Efremenko, V.I.; Fedotov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701771.

The ratio R(x) = (dN/dx)sup(Ne)/(dN/dx)sup(D) of the x-distributions (x = Q^2/2Mnu is the usual scaling variable, Q^2=-(psub(nu)-psub(μ))sup(2) is the squared 4-momentum transferred to hadrons, nu = Esub(nu) - Esub(μ) is the energy transfer, M is the nucleon mass) is reported for anti nusub(μ)Ne and anti nusub(μ)D bubble chamber data taken in IHEP and another experiments, respectively. The R(x) behaviour is contrary to that expected from Fermi motion picture. The observed effect in the range 0.1 < x < 0.7 is analogous to the variation of Fsub(2)sup(Fe)(x)/Fsub(2)sup(D)(x) (where Fsub(2)sup(Fe) and Fsub(2)sup(D) are the nucleon structure functions from iron and deuterium) as reported by the EMC group. 10 references, 2 figures.

40529 **(JINR—1-83-569) Detection and analysis of neutrino interactions with nuclei in photoemulsion at IHEP accelerator (Serpukhov).** Batusov, Yu.A.; Bunyatov, S.A.; Kuznetsov, O.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701789.

The results of detection and analysis of neutrino interactions with nuclei in photoemulsion at IHEP accelerator (Serpukhov) at 2-30 GeV neutrino energy are presented. 13 interactions of neutral particles are detected in two runs of emulsion irradiation. Nine of them are integrated as neutrino interactions hns b(μ)N(-) μsup(-)X, caused by weak charged current. 20 references, 4 figures, 3 tables.

40530 **(JINR—E-1-84-280) 2$^-$ resonances in the $\pi^+\pi^-\pi^-$ systems.** Bellini, G.; Corato, M.; Frabetti, P.L. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1984. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701799.

A partial-wave analysis has been performed for approximately 120000 $\pi^+\pi^-\pi^-$ events coherently produced on nuclear targets in a π-beam of 40 GeV Partial wave intensities and a large phase variation prove the resonant nature of the A$_3$-meson in the jsup(pc) = 2^{-+} partial wave. The resonance behaviour of the 2$^-$ partial wave has been determined in the fnu, pπ, epsilonπ decay mode. The position method, using all available information about intensities and phases of partial waves. The position of the stable pole in the amplitude in the lower half of the complec energetic plane has been found, wchich is respons ble for the resonance position. The resonance parameters are as follows: msub(2 2sup(-)s) = (1624+-21) MeV/c^2, <-> gitasub(2sup(-)s) = (304 +- 22) MeV; msub(2sup(-)p) = (1622 +- 35) MeV/c^2, <-> gitasub(2sup(-)p) = (404 +- 108) MeV; m msub(2sup(-)d) = (1693 +- 28) MeV/c^2, <-> gitasub(2sup(-)d)=(330+-90) MeV. The production cross-sec-

tion is equal to (37 +- 5) μb/nucleon. Evidence has been found for new resonances in the $1^+,2^-,2^+$ waves. 12 references, 6 figures.

40531 (JINR—R-1-84-311) Measurement of polarization in the $\pi p p \rightarrow \pi^0 n$, $\pi^0 \rightarrow 2\gamma$ reaction at the momentum of 40 GeV/c with detection of all reaction products. Borisov, N.S.; Kazarinov, Yu.M.; Liburg, M.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701800.

The result of polarization measurement in the charge-exchange reaction $\pi^- p$-$\pi^0 n$ is given. In this case the use of elastic kinematics as selection criterion permitted to considerably decrease the background from complex nuclei, which are present in polarized proton target and the kinematics permitted to considerably decrease the contribution made by inelastic reactions proceeding with the production of π^0-mesons, and in its turn, the fact permits to exclude to a great extent the main sources of systematic errors. The obtained data on polarization in the range of momenta transferred $0< t <2$ (GeV/s)^2 are presented. 17 references, 9 figures, 2 tables.

40532 (JINR—R-1-84-657) Experimental study on the $\pi i p \rightarrow K^+ \Sigma^+$ reaction at 12 GeV/c. Bitsadze, G.S.; Budagov, Yu.A.; Vinogradov, V.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701801.

The results on the study of the $\pi^+ p \rightarrow K^+ \Sigma^+$ reaction at 12 GeV/c are presented. The differential cross section in t sub(min) < t < 0.8(GeV/c)^2 momentum transfer range is measured. The Σ^+ polarization for t < 0.5(GeV/c)^2 is determined. The presented results make the available data more precise. The $\pi^+ p \rightarrow K^+ \Sigma^+$ binary reaction was selected by analyzing the missing mass for the forward emitted fast K meson. The total cross section in the studied momentum transfer range is 20.2 +- 2.4 μb with making allowance for the measurement systematic error. The experimental results are compared with the predictions by the Regge-pole models which take into account effects of rescattering and secondary singularities. 17 references, 7 figures, 2 tables.

40533 (JINR—R-1-84-658) Differential cross section of the $\pi i p \rightarrow K^+ \Sigma^+$ (1385) reacton at 12 GeV/c. Bitsadze, G.S.; Budagov, Yu.A.; Vinogradov, V.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1984. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701802.

Experimental results on the measurement of differential cross section of the $\pi^+ p \rightarrow K^+ \Sigma^+$ (1385) reaction at 12 GeV/c for 0.006(GeV/c)^2 < t < 0.8(GeV/c)^2 momentum transfer range are presented. The missing mass method for the reaction identification is used. The total cross section for t < 0.8 (GeV/c)^2 is equal to 7.3 + 1.1 μb with making allowance for the measurement systematic error. The cross section behaviour points to practical absence of contribution of the spin non-flip amplitude. 10 references, 3 figures, 2 tables.

40534 (LBL—19618) Limits for supersymmetry from a comprehensive study of CERN missing-energy events. Barnett, R.M. (Lawrence Berkeley Lab., CA (USA)). Apr 1985. Contract AC03-76SF00098. 10p. (CONF-850375—13). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014530.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

We have performed a comprehensive analysis of supersymmetric processes which can lead to missing-energy events such as those observed by the UA1 collaboration. Several critical aspects of the theoretical analysis are discussed here including fragmentation, backgrounds, and evolution of gluinos. When the experimentalists publish their final data, excellent limits will be set for M/sub g/ and M/sub q/, and it is possible that certain mass regions will not be excluded as explanations of the data.

40535 (LPNHEX-T—84-01) Nuclear effect study on nucleon structure functions, in comparison with antineutrino interactions on neon and deuterium. Vallee, C. (Ecole Polytechnique, 91 - Palaiseau (France). Lab. de Physique Nucleaire et des Hautes Energies; Paris-11 Univ., 91 - Orsay (France)). Mar 1984. 165p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE85751935.

We have studied the nuclear effects on high energy antineutrino charged current interactions by comparing the data which were taken in the Bubble Chamber BEBC filled with Neon and Deuterium. On the one hand, the study of nuclear reinteractions gave us the possibility to estimate the formation time of hadrons. On the other hand, the comparison of structure functions does not show any significant difference between Neon and Deuterium. Though this result does not contradict the effects observed with charged leptons by the EMC and SLAC experiments, it is strongly incompatible with certain theoretical interpretations which implied a stronger effect in antineutrino interactions.

40536 (MPI-PAE/Exp.El.—146) Polarization of Λ hyperons produced inclusively in νp and anti νp charged current interactions. Jones, G.T.; Kennedy, B.W.; O'Neale, S.W.; Boeckmann, K.; Gebel, W.; Geich-Gimbel, C.; Nellen, B.; Cooper-Sarkar, A.M.; Grant, A.; Klein, H. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik). Jan 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752024.

Lambda hyperons from νp and anti np charged current interactions have been analysed for polarization. A significant polarization is observed for Λ particles in the quasi-elastic region for both types of interactions. Part of this polarization is due to the decay of highly polarized Σ(1385) resonances. The results are compared with simple predictions of the quark parton model.

40537 (MPI-PAE/Exp.El.—148) Observation of Bsup(*) production in $e^+ e^-$ interactions above the b-flavor threshold. Han, K.; Klopfenstein, C.; Mageras, G.; Dietl, H.; Eigen, G.; Fonseca, V.; Franzini, P.; Horstkotte, J.E.; Imlay, R.; Lee-Franzini, J. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik). Mar 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752025.

We have observed production of monochromatic low energy photons in $e^+ e^-$ interactions between 10.6 and 11.2 GeV/c^2. This signal is interpreted as due to the decay B* -> B+γ and is the first experimental evidence for the existence of vector banti u or banti d bound states. We determine the mass difference of the vector and pseudoscalar states, M(B*)-M(B), to be 52+-2+-4 MeV.

40538 (OUP—84-16) Charmonium spectroscopy in proton-antiproton annihilation. Bugge, L. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1984. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781051.

CERN Intersection Storage Rings.

An experiment set up at the CERN ISR to study charmonium spectroscopy in proton-antiproton annihilation is described. A cooled, well defined antiproton beam hits a dense molecular H*sb2* gas jet target giving a luminosity of pparox. 5 x 10*sp30*cm*sp-2*s *sp-1*. Masses and widths are obtained to witin 500 keV. Results from tests runs are briefy discussed.

40539 (RAL—84-087) Do protons decay. Litchfield, P.J. (Rutherford Appleton Lab., Chilton (UK)). Sep 1984. 8p. (CONF-840795—7). NTIS (US Sales Only), PC A02/MF A01. File Number DE85781046.

From 7. European symposium on antiproton interactions; Durham, UK (9 Jul 1984).

The experimental status of proton decay is reviewed after the Leipzig International conference, July 1984. A brief comparative description of the currently active experiments is given. From the overall samples of contained events it can be concluded that the experiments are working well and broadly agree with each other. The candidates for proton decay from each experiment are examined. Although several experiments report candidates at a higher

rate than expected from background calculations, the validity of these calculations is still open to doubt.

40540 (RAL—84-110) Observations of a very long-lived D-bar^0 decay to $K^+\pi^+\pi^-\pi^-$ with a proper flight time of 55 x 10^{-13} seconds. (Rutherford Appleton Lab., Chilton (UK)). Oct 1984. 12p. (SLAC-PUB—3493). NTIS (US Sales Only), PC A02/MF A01. File Number DE85781052.

Submitted to Physical Review Letters.

The characteristics of a very interesting event recently found in an exposure of the SLAC Hybrid Facility to 20 GeV photons are discussed. This event contains two decays and is consistent with the production and decay of two charmed particles. The longer decay, of length 9mm, fits the hypothesis D-bar$^0 \rightarrow K^+\pi^+\pi^-\pi^-$ and has a proper flight time of 55 x 10^{-13}s. Possible background sources for this event are investigated and found to be extremely small.

40541 (RAL—85-001) Particle physics experiments 1984. Stuart, G. (Rutherford Appleton Lab., Chilton (UK)). Jan 1985. 298p. NTIS (US Sales Only), PC A13/MF A01. File Number DE85781050.

The Rutherford Appleton laboratory report describes work carried out in 1984 on experiments approved by the Particle Physics selection panel. The contents consist of unedited contributions from each experiment.

40542 (SLAC—282) Radiative decays of the psi prime to all-photon final states. Lee, R.A. (Stanford Linear Accelerator Center, CA (USA)). Jun 1985. Contract AC03-76SF00515. 157p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE85014895.

Results of studies of selected radiative decays of the psi' to charmonium and non-charmonium states which decay into photons are presented. These studies were performed using a sample of 1.8 x 10^6 produced psi''s collected by the Crystal Ball detector at the SPEAR electron-positron storage ring. The branching ratios of the chi$_0$, chi$_2$, and eta'/sub c/ to two photons have been measured to be (4.5 +- 2.2 +- 2.0) x 10^{-4}, (9.5 +- 2.9 +- 4.5) x 10^{-4} (first errors statistical, second systematic), and $<1 \times 10^{-3}$ (90% C.L.). The signal from the decay chain psi' $\rightarrow \gamma$chi$_0$, chi$_0 \rightarrow \pi^0\pi^0$ has been observed with essentially no background. Using the observed line shape of the radiative photon in this reaction, the full width of the psi$_0$ has been found to be 8.8 +- 1.3 +- 1.5 MeV/c^2. In addition, the branching ratios of the chi$_0$ and chi$_2$ to $\pi^0\pi^0$ have been measured to be (3.5 +- 0.3 +- 1.2) x 10^{-3} and (1.2 +- 0.2 +- 0.4) x 10^{-3}; the branching ratios of the chi$_0$ and chi$_2$ to eta eta have been measured to be (2.8 +- 0.9 +- 1.3) x 10^{-3} and (8.4 +- 4.2 +- 4.0) x 10^{-4}. The decays of the psi' to four non-charmonium states have been investigated. The branching ratios and upper limits of these decays have been normalized to the branching ratios of the corresponding decays from the J/psi which have been measured using a sample of 2.2 x 10^6 produced J/psi's collected by the Crystal Ball detector. The ratios of the psi' branching ratios to the J/psi branching ratios for the final states γeta, γeta', γtheta, and γf have been measured to be $<1.8\%$, $<2.6\%$, <10 to 15%, and 9 +- 3%. These results are compared with the theoretical expectations of lowest-order quantum chromodynamics potential models. Substantial disagreement is found between theory and experiment.

40543 (SLAC-PUB—3676) Radiative decays of the psi' to all-photon final states. Lee, R.A. (California Univ., Santa Cruz (USA). Inst. for Particle Physics; Stanford Linear Accelerator Center, CA (USA)). May 1985. Contract AC03-76SF00515. 8p. (CONF-850375—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014364.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

A sample of 1.8 x 10^6 produced psi's collected by the Crystal Ball detector at SPEAR is used to measure branching ratios of selected radiative psi' decays to non-charmonium states which decay into photons. A sample of 2.2 x 10^6 produced J/psi's is used to measure the same radiative decays from the J/psi. The ratios BR(psi' $\rightarrow \gamma$f)/BR(J/psi $\rightarrow \gamma$f) = 9 +- 3%, BR(psi' $\rightarrow \gamma\theta$)/BR(J/psi $\rightarrow \gamma\theta$) < 10% - 15%, BR(psi' $\rightarrow \gamma$eta)/BR(J/psi $\rightarrow \gamma$eta) < 1.8%, and BR(psi' $\rightarrow \gamma$eta')/BR(J/psi $\rightarrow \gamma$eta') < 2.6% have been obtained. (Upper limits are 90% confidence level. The upper limit for the radiative decay to the θ is uncertain due to the possible presence of an f' signal in the J/psi data). Assuming these decays proceed via the annihilation of the initial quark and antiquark to a photon and two gluons, these ratios are predicted by lowest order QCD to be the same as the ratio of leptonic branching ratios of the psi' and J/psi, or 12.0 +- 2.2%. There currently exists no compelling explanation for the discrepancy between the ratios measured for the last two decays and the theoretical expectation.

40544 (SLAC-PUB—3680) 3081/E processor and its on-line use. Rankin, P.; Bricaud, B.; Gravina, M.; Kunz, P.F.; Oxoby, G.; Trang, Q.; Ferran, P.M.; Fucci, A.; Hinton, R.; Jacobs, D. (Stanford Linear Accelerator Center, CA (USA); European Organization for Nuclear Research, Geneva (Switzerland)). May 1985. Contract AC03-76SF00515. 5p. (CONF-850579—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE85013069.

From 4. topical conference on computerized data acquisition in particle and nuclear physics; Chicago, IL, USA (19 May 1985).

The 3081/E is a second generation emulator of a mainframe IBM. One of it's applications will be to form part of the data acquisition system of the upgraded Mark II detector for data taking at the SLAC linear collider. Since the processor does not have direct connections to I/O devices a FASTBUS interface will be provided to allow communication with both SLAC Scanner Processors (which are responsible for the accumulation of data at a crate level) and the experiment's VAX 8600 mainframe. The 3081/E's will supply a significant amount of on-line computing power to the experiment (a single 3081/E is equivalent to 4 to 5 VAX 11/780's). A major advantage of the 3081/E is that program development can be done on an IBM mainframe (such as the one used for off-line analysis) which gives the programmer access to a full range of debugging tools. The processor's performance can be continually monitored by comparison of the results obtained using it to those given when the same program is run on an IBM computer. 9 refs.

40545 (SLAC-PUB—3686) Search for new effects in e^+e^- interactions. Bloom, E.D. (Stanford Linear Accelerator Center, CA (USA)). May 1985. Contract AC03-76SF00515. 16p. (CONF-850278—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014365.

From 5. topical workshop on proton-anti-proton collider physics; St. Vincent, Italy (25 Feb 1985).

Recent measurements of R, the ratio of the total hadron cross section to the lowest order muon pair cross section, are discussed which have systematic overall scale errors on the absolute value of R of 7% or less. Experiments are reviewed that have sought exotic effects in e^+e^- at the highest available energies. The search for narrow states in the radiative decays of the J/psi and Y are also reviewed. 35 refs., 24 figs. (LEW)

40546 Analyzing powers in πi p elastic scattering at intermediate energies. Mokhtari, A.; Briscoe, W.J.; Eichon, A.D.; Fitzgerald, D.H.; Kim, G.J.; Nefkens, B.M.K.; Wightman, J.A.; Adrian, S.D.; Sadler, M.E.; Walker, T. (Department of Physics, University of California, Los Angeles, California 90024). *Physical Review Letters;* **55**: No. 4, 359-362(22 Jul 1985).

The analyzing power, A/sub N/, has been measured for π^+p elastic scattering at p/sub π/ = 471, 547, 625, and 687 MeV/c on a transversely polarized target. The results are compared with three recent partial-wave analyses for the isospin (3/2) channel. The agreement with our data for all three analyses is good at 471 MeV/c and reasonable at 547 and 625 MeV/c. At 687 MeV/c two of the analyses show a sharp maximum near cosθ = -0.4 which is not seen in the data. There is no indication in our data of the existence of new, narrow Δ resonances.

40547 **Jet production and quark fragmentation results from PEP.** Hanson, G.G. (Stanford Linear Accelerator Center, CA (USA)). pp 147-151a of Proceedings of HEP83. International Europhysics conference on high energy physics, Brighton (UK), 20-27 July, 1983. Guy, J. (Rutherford Appleton Lab., Chilton (UK)); Costain, C. (eds.). Chilton, England; Rutherford Appleton Laboratory (1983). (CONF-830718—). Contract AC03-76SF00515.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

Results on jet production and quark fragmentation are presented from the five detectors at the PEP e^+e^- storage ring at the Stanford Linear Accelerator Center. All data were taken at a center-of-mass energy (Esub(c.m.)) of 29 GeV. The topics which will be discussed are particle identification, charge and multiplicity correlations, energy correlation asymmetry, D* and D production and fragmentation, and heavy quark fragmentation results from inclusive lepton studies. PEP ran very well this year (1983) with 150 pb^{-1} delivered during the past running period. It will take the experiments some time to fully analyze this data.

40548 **(ANL/HEP-CP—85-32) Factorization of the Drell-Yan cross section.** Bodwin, G.T.; Brodsky, S.J.; Lepage, G.P. (Argonne National Lab., IL (USA); Stanford Linear Accelerator Center, CA (USA); Cornell Univ., Ithaca, NY (USA). Lab. of Nuclear Studies). Apr 1985. Contract W-31-109-ENG-38. 14p. (CONF-850375—14). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014978.

From 20. Recontre de Moriond; Les Arcs, France (10 Mar 1985).

We state the weak and strong factorization theorems for the Drell-Yan cross section and outline the ingredients involved in their proof. We also discuss the physical picture implied by the factorization results and its phenomenological consequences.

40549 (CEA-N—2406, pp 150-153) **Dilepton production from quark gluon plasma using non-equilibrium thermodynamics.** Sinha, B. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The importance of the approach phase to the thermodynamic equilibrium has been investigated for dilepton production from quark-gluon plasma - an effective temperature for the quarks as Brounian particle in a heat bath of gluons has been suggested. The spectrum for low invariant mass is, as a consequence, sharper.

Lab. de Physique Theorique et Hautes Energies). 5 Sep 1984. NTIS (US Sales Only), PC A11/MF A01. File Number DE85781156. (CONF-8403162—Vol.2).

From ECFA/CERN workshop on the possibility of a large hadron collider in the LEP tunnel; Lausanne, Switzerland (22 Mar 1984).

We study hard hadronic collisions for the proton-proton (pp) and the proton-antiproton (p anti p) option in the CERN LEP tunnel. Based on our current knowledge of hard collisions at the present CERN p anti p Collider, and with the help of quantum chromodynamics (QCD), we extrapolate to the next generation of hadron colliders with a centre-of-mass energy E/sub cm/ = 10-20 TeV. We estimate various signatures, trigger rates, event topologies, and associated distributions for a variety of old and new physical processes, involving prompt photons, leptons, jets, W^{+-} and Z bosons in the final state. We also calculate the maximum fermion and boson masses accessible at the LEP Hadron Collider. The standard QCD and electroweak processes studied here, being the main body of standard hard collisions, quantify the challenge of extracting new physics with hadron colliders. We hope that our estimates will provide a useful profile of the final states, and that our experimental physics colleagues will find this of use in the design of their detectors.

40555 (CERN—84-10-Vol.2, pp 531-542) **Soft physics with a supercollider.** Andersson, B. (Lund Univ. (Sweden). Dept. of Theoretical Physics). 5 Sep 1984. NTIS (US Sales Only), PC A11/MF A01. File Number DE85781156. (CONF-8403162—Vol.2).

From ECFA/CERN workshop on the possibility of a large hadron collider in the LEP tunnel; Lausanne, Switzerland (22 Mar 1984).

I discuss a set of possible, more or less adventurous, physics scenarios for the soft physics of a supercollider of 10-20 TeV cms energy. I also present extrapolations of the sizes of different quantities to these immense energies. One should always note that whether we like it or not, some 95-99% of the cross-section is soft physics at all energies.

40556 (CERN—84-10-Vol.2, pp 543-548) **Heavy vector bosons and super colliders.** Llewellyn Smith, C.H.; Wheater, J.F.; Phillips, R.J.N. (Oxford Univ., England). 5 Sep 1984. NTIS (US Sales Only), PC A11/MF A01. File Number DE85781156. (CONF-8403162—Vol.2).

From ECFA/CERN workshop on the possibility of a large hadron collider in the LEP tunnel; Lausanne, Switzerland (22 Mar 1984).

We concentrate on the extra bosons predicted by left-right symmetric models, in which parity - and also charge conjugation, in some versions - is spontaneously broken.

40557 (CONF-8406198—45) **Intrinsic Chevrolets at the SSC.** Brodsky, S.J.; Collins, J.C.; Ellis, S.D.; Gunion, J.F.; Mueller, A.H. (Stanford Linear Accelerator Center, CA (USA); Illinois Inst. of Tech., Chicago (USA). Dept. of Physics; Argonne National Lab., IL (USA); Washington Univ., Seattle (USA). Dept. of Physics; California Univ., Davis (USA). Dept. of Physics; Columbia Univ., New York (USA). Dept. of Physics). 1984. Contract W-31-109-ENG-38. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85013896.

From Design and utilization of the superconducting super collider summer study; Snowmass, CO, USA (23 Jun 1984).

The possibility of the production at high energy of heavy quarks, supersymmetric particles and other large mass colored systems via the intrinsic twist-six components in the proton wave function is discussed. While the existing data do not rule out the possible relevance of intrinsic charm production at present energies, the extrapolation of such intrinsic contributions to very high masses and energies suggests that they will not play an important role at the SSC.

40558 (CRN-HE—84-10) **New weak boson decays and possible spin 3/2 leptons.** Fleury, N.; Leite Lopes, J.; Martins Simoes, J.A. (Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires). 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85751926.

In this note we discuss the possibility that new spin 3/2 leptons can occur in nature as a manisfestation of leptonic structure and in multiplets in supersymmetric theories. We postulate a new interaction between spin 1/2 and spin 3/2 particles that maintains the standard SU(2)sub(L) x U(1) local gauge invariance. A comparison with the anomalous $Z^0 \rightarrow e^+ e^- \gamma$ events is made and new decays for the weak bosons are studied.

40559 (DESY—85-006) **New particles and two-photon physics.** Schrempp, F. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Jan 1985. 32p. (CONF-8409194—6). NTIS (US Sales Only), PC A03/MF A01. File Number DE85752007.

From 6. international workshop on photon-photon collisions; Lake Tahoe, CA, USA (9 Sep 1984).

In a first part, I review the general theoretical arguments leading to new physics and new particles beyond the Standard Model, either in terms of supersymmetry or compositeness. Speculations about new particles expected within these schemes are then discussed in the light of recent anomalous events from the panti p collider and from PETRA. In a second part, I specifically try to evaluate the potential of $\gamma\gamma$ and epsilonγ collisions at PETRA/PEP and LEP energies with respect to new particle searches. Some interesting possibilities, including searches for spinless composite bosons, non-standard enhanced Higgs particles, scalar electrons (e) and $\gamma\gamma$ ->'nothing' emerge.

40560 (DESY—85-008) **Confinement criterion for QCD with dynamical quarks.** Fredenhagen, K.; Marcu, M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Jan 1985. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752009.

We propose a criterion that tests the existence of isolated quarks in QCD.

40561 (DESY—85-015) **Monopole-fermion and dyon-fermion bound states. Pt. 5.** Osland, P.; Schultz, C.L.; Wu, T.T. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. Contract FG02-84ER40158. 66p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85752015.

We present explicit, approximate, remarkably precise results for the Kazama-Yang Hamiltonian, which describes a Dirac monopole interacting with a spin-1/2 fermion that has an extra magnetic moment. The results are valid for bound states of angular momentum j > = Zvertical strokeegvertical stroke+1/2, where the radial wave functions are determined by four coupled differential equations. These equations have been solved analytically for M - E << M, which is a limit of considerable practical interest. Binding energies and wave functions are given.

40562 (DOE/ER/03992—576) **Quantum relativistic oscillator II. Non-relativistic limit and phenomenological justification.** Bohm, A.; Loewe, M.; Magnollay, P. (Texas Univ., Austin (USA). Center for Particle Theory). Dec 1984. Contract AS05-76ER03992. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014731.

It is shown that the quantum relativistic oscillator with noncommuting internal momentum and position has as the non-relativistic contraction limit the usual three-dimensional oscillator. The non-relativistic limits for representations with integer and half integer spin are compared with the quark model picture. The spectrum predicted by the quantum relativistic oscillator with rotations is compared with experimental hadron spectra. 14 refs., 7 figs.

40563 (DOE/ER/03992—577) **Dirac neutrinos in GUTs.** Sarkar, U. (Texas Univ., Austin (USA). Center for Particle Theory). Jan 1985. Contract AS05-76ER03992. 10p. (CONF-8410224—9). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014730.

From AIP conference on neutrino mass and gauge structure of weak interaction; Cable, WI, USA (24 Oct 1984).

Some of the recent experimental results can be explained by considering the electron neutrino to be a Dirac particle. In the present article, the possible grand unified theories of generating such ultralight Dirac neutrinos in a natural way are reviewed. 19 refs.

40564 (DOE/ER/04999—T3) **Research in high energy physics (particles and fields and their interactions). Technical progress report, September 1, 1978-July 30, 1979.** Yildiz, A. (New Hampshire Univ., Durham (USA). Coll. of Engineering and Physical Sciences). 1979. Contract AC01-78ER04999. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85013511.

The research activities reported relate to the following areas: search for Higgs and gauge bosons, proton decay, theoretical investigations on unified theories, the neutron's electric dipole moment, and vacuum behavior in quantum chromodynamics. (LEW)

40565 (DOE/ER/04999—T4) **Research in particles and fields and their interactions. Technical progress report, November 1981-December 1982.** Yildiz, A. (New Hampshire Univ., Durham (USA). Coll. of Engineering and Physical Sciences). 1982. Contract AC01-78ER04999. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85013512.

The research reported included: investigation of Grand Unification Theories, calculation of the electric dipole moment of the neutron, and work in cosmology-particle physics. A few areas still under investigation include extended supersymmetry, finite temperature field theories, inflationary universe scenarios, heavy ion colli-

sion physics, and hypercolor unification without domain walls. 9 refs. (LEW)

40566 **(DOE/ER/40025—34) Comments about the electroweak asymmetry in $e^+e^- \rightarrow f$ anti f.** Ford, W.T. (Colorado Univ., Boulder (USA)). May 1985. Contract AC02-81ER40025. 6p. (MAC—730). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014899.

Some questions are considered regarding the proper treatment of weak radiative corrections in the $e^+e^- \rightarrow f$ anti f asymmetry measurement (where f is a charged bermion other than e) and what is the best way to use the data to test the standard model. (LEW)

40567 **(DOE/ER/40169—1) Parton dynamics in hadronic processes. Technical progress report.** Sukhatme, U.P. (Illinois Univ., Chicago (USA). Dept. of Physics). Feb 1985. Contract FG02-84ER40169. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014271.

We have studied the production of strangeness, charm and other heavy flavors in hadronic collisions in the framework of the dual parton model. This model allows us to understand why heavy flavors have "delayed thresholds" and noticeable production at large x values. We have also studied the leading particle effect in a variety of processes. We suggest the intriguing possibility that certain experimentally feasible non-diffractive processes involving soft gluons might have forward "diffraction-like" peak as $x \rightarrow 1$. Finally, we have extended the techniques previously developed by us to get accurate analytic expressions for energy eigenstates. This enables us to get much-improved expansions for bound state wave functions, which compare remarkably well with numerical computations. 9 refs.

40568 **(IFVE-OEF—84-14) New test of non-Abelian nature of QCD.** Zmushko, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701773.

The sign of the interference term $\Delta(d\sigma/dt)$ of the quark-quark scattering cross section is shown to be connected with the non-Abelian nature of the QCD. It is proposed to measure the sign of the difference of the inclusive cross sections for π^0 production in pp and np collisions with large psub(T), which is defined by $\Delta(d\sigma/dt)$ sign. The predictions for the effect value are presented. 8 references, 3 figures.

40569 **(IFVE-ONF—84-84) Possibility of detection of heavy neutrino decays.** Baranov, D.S.; Vovenko, A.S.; Spiridonov, A.A.; Tikhonin, F.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701770.

A possibility to detect decays of heavy neutrinos that might be produced from pion and kaon decays are examined. Different decay modes of heavy Dirac neutrino were considered. Estimations show that if one uses a special configuration of the neutrino detector in searching for decays in the wide-spectrum neutrino beam of the IHEP accelerator then a considerable improvement of the limits on the neutrino mixing parameters in the 10-490 MeV mass range may be achieved. 27 references, 7 figures, 3 tables.

40570 **(IFVE-OTF—84-30) Relation between high-energy and low-energy parameters of $\pi\pi$ interaction.** Parfenov, Yu.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701774.

A low energy model of partial amplitudes for $\pi\pi$ scattering which agrees well with the available low-energy information, has been proposed. On the basis of this model the behaviour of total cross sections for $\pi\pi$ scattering is considered in the asymptotic domain for simple and double pomeron, the last arising as an intersection of the trajectories of two simple poles. 13 references, 4 figures, 1 table.

40571 **(IFVE-OTF—84-37) Cross section growth of hadron-hadron interactions and its possible connection with glueball existence.** Gershtejn, S.S.; Logunov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701775.

A hypothesis on the connection of hadron interaction cross sections growth and the resonance production of glueballs from two sea gluons is proposed. This mechanism may explain the appearance of a large scale factor S_0 approximately GeV^2 in the growing part of the cross section. 9 references, 1 figure.

40572 (INIS-mf—9311, pp 197-208) **Summary talk on electroweak interactions and neutrino physics.** Scheck, F. (Mainz Univ. (Germany, F.R.). Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

There are two different approaches to particle physics at intermediate energies (where 'intermediate' more precisely refers to the mass and energy range up to, say, the W and Z^0 masses), through which this branch is and will prove to be complementary to research at higher energies: (A) Precision experiments to test the validity and limitations of our present understanding of strong and electroweak interactions and its theoretical framework. In some of the following discussion we shall call this the 'Lamb shift approach'. (B) Searches for new phenomena that would require, if they are confirmed, major revision of the present ideas and reference theories, as well as investigations in those areas where these theories are unable to make affirmative predictions. The frame of reference to which the discussions and investigations refer is what we presently call the standard model of strong, electromagnetic and weak interactions.

40573 (INIS-mf—9311, pp 367-402) **Electromagnetic probing of hadron structure and nuclear constituents.** Drees, J. (Wuppertal Univ. (Gesamthochschule) (Germany, F.R.)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984). Summary of discussion.

The topics presented in the working group centered around particle and nuclear physics prospects for future electron accelerators in the few GeV region and for muon beams with 100-300 GeV beam energy. This included a comparison of the possibilities of a muon beam feasible at a 20-30 GeV proton machine versus an electron beam. I concentrate on those areas where our understanding of nucleon and nuclear structure is still weak and where important pieces of experimental information are missing.

40574 (INIS-mf—9311, pp 137-150) **Radiative weak decays.** Schilcher, K. (Mainz Univ. (Germany, F.R.). Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

To every weak decay there exists a radiative pendant where an additional real photon is emitted. Since QED is a well-established theory, it may seem that not much can be learned from a study, experimentally or theoretically, of radiative decays. Quite the opposite is true, however, for these decays open exciting new windows to look at the weak interactions of hadrons. For instance, in radiative pion decay both vector and axial currents contribute nontrivially.

40575 (INIS-mf—9311, pp 3-51) **Weak interactions of hadrons.** Rueckl, R. (European Organization for Nuclear Research, Geneva (Switzerland)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

A summary is presented of the topics discussed in the study group on 'Weak Interactions of Hadrons'.

40576 (INIS-mf—9311, pp 151-170) **Low-energy weak interactions of hadrons in the standard model.** Schmid, C. (Eidgenoessische Technische Hochschule, Zurich (Switzerland). Inst. fuer Theoretische Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

Weak interactions at the quark-lepton level are concisely and successfully described by the Glashow-Weinberg-Salam-GIM-KM model. The strong interaction effects involving large Psub(t) (hard gluon corrections) can be computed by perturbative QCD, while the difficult task has to do with nonperturbative QCD effects: How can we make predictions at the hadron level.

40577 (INIS-mf—9311, pp 261-284) **Physics with protons, pions, antiprotons.** Koch, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.); Karlsruhe Univ. (T.H.) (Germany, F.R.)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

Summary of discussion.

The background of the discussions within this session was the question of what interesting physics could be done if π, p, K, anti p, anti n-beams of good quality and high intensities were available in an energy region up to 30 GeV for primary and up to 15 GeV for secondary particles. I have picked up three main topics which will be discussed in Section 2:* Where is the region of Asymptotica; spectroscopy of quarks with different flavors; low energy phenomena. In Section 3 it is tried to summarize all requests to the particle beams which would satisfy the potential users of such a high intensity facility as far as hadronic aspects are concerned. From these requests conclusions will be drawn in respect to the parameters of the machine feeding the beams. In Section 4, the highlights of the discussions are summarized and conclusions are drawn.

40578 (INIS-mf—9311, pp 285-287) **Charm, bottom and Higgs search.** Dalpiaz, P. (Ferrara Univ. (Italy). Ist. di Fisica; Istituto Nazionale di Fisica Nucleare, Bologna (Italy)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

Published in summary form only.

40579 (INIS-mf—9311, pp 289-316) **Physics interest in wide angle scattering of hadrons at medium energies.** Kroll, P. (Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 8 - Naturwissenschaften 1 - Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

The physics interest in exclusive and inclusive hadronic reactions at wide angles and medium energies is discussed. The importance of the study of spin effects is stressed. These are very sensitive to the underlying dynamics and allow severe tests of any model. The hard scattering picture for exclusive and inclusive reactions is examined in some detail as well as a few alternatives which might be more appropriate for semihard reactions.

40580 (INIS-mf—9311, pp 317-336) **anti pp physics above 2GeV/c.** Litchfield, P.J. (Science and Engineering Research Council, Chilton (UK). Rutherford Appleton Lab.). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

Also presented at the LAMPF II workshop, July 1983.

I present some of the physics that can be done with the intense anti p beams that would be available from a high intensity, 30 GeV, rapid cycling proton synchrotron. Physics below 2 GeV/c will be extensively studied at the LEAR facility at CERN and I thus restrict myself to beam momenta above this value. I specify the requirements for beams and detectors to enable a program of anti pp physics to be done.

40581 (INIS-mf—9311, pp 339-354) **Summary of the working group "strong interactions with strange particles".** Walcher, T. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

The talks and discussions of the working group on 'Strong Interactions with Strange Particles' are summarized. Three main topics are covered: 1) Strange Baryons and Dibaryons, 2) Scattering of Strange Baryons and Mesons, and 3) Hypernuclei. The idea of strong interactions with strange hadrons as a means to study quark dynamics in the low q^2 regime is emphasized.

40582 (INIS-mf—9311, pp 53-117) **CP violation in the standard model and beyond.** Buras, A.J. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

The present status of CP violation in the standard six quark model is reviewed and a combined analysis with B-meson decays is presented. The theoretical uncertainties in the analysis are discussed and the resulting KM weak mixing angles, the phase delta and the ratio epsilon'/epsilon are given as functions of Tsub(B), GAMMA(b -> u)/GAMMA(b -> c), msub(t) and the B parameter. For certain ranges of the values of these parameters the standard model is not capable in reproducing the experimental values for the epsilon' and epsilon parameters. Anticipating possible difficulties we discuss various alternatives to the standard explanation of CP violation such as horizontal interactions, left-right symmetric models and supersymmetry. CP violation outside the kaon system is also briefly discussed.

40583 **(INIS-mf—9572) Mass spectrum of particles.** Sajo, I. (Magyar Tudomanyos Akademia, Debrecen. Atommag Kutato Intezete). 1983. 101p. (In Hungarian). NTIS (US Sales Only), PC A06/MF A01. File Number DE85781268.

An eigenvalue formula of general validity was developed with correct mathematical methods from measured data of the stationary mass and self-energy of stationary particles; this is able to generate universally the mass of particles belonging to any class or group, i.e. to produce the spectra of particles with a stationary mass surpassing that of the electron. The author shows that this eigenvalue formula can be produced as the product of several partial formulae which, separately, are not more complicated than that developed by Balmer from data measured on the spectrum of the hydrogen atom. The validity of the first version of the formulae was checked for many particles discovered subsequently. The results are published in detail in the present paper, together with the method of development of the universal eigenvalue formula generating the mass spectrum of elementary particles. The formulae describing the discrete energy levels of the particles can be extended by considering the theory of special relativity, also to the mass of moving particles. 14 references, 6 figures, 12 tables.

40584 **(INIS-mf—9690) Calculation of energy levels in a system of two magnetic monopoles by semiclassic theory.** Barricelli, N.A. (Oslo Univ. (Norway). Matematisk Inst.). 1982. 3p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781269.

This paper presents evidence that in a system of two magnetic monopoles the energy levels can easily be calculated by semiclassical methods, in spite of their large magnetic charges, provided one pays attention to the fact that the lowest orbits in such systems are far inside the classical radius distance range. At this range the

magnetic fields are far weaker than their coulombian values according to classic and semiclassic theory, because as one approaches the center a growing portion of the charge remains outside and does not contribute to the local magnetic field. The very strong short range coulombian fields which have frustrated all earlier attempts to calculate energy levels in a system of two magnetic monopoles do not and cannot materialize in semiclassic theory. Examples of calculated orbits and energy levels are presented.

40585 **(INIS-mf—9691) Masses of elementary particles. Application of semi-classical energy levels in magnetic monopole systems.** Barricelli, N.A. (Oslo Univ. (Norway). Matematisk Inst.). 1983. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781270.

The semi-classical method of calculating the energy levels in a system of two magnetic monopoles, presented in a preceding paper, is applied in the interpretation of the masses and angular momenta of various elementary particles. The interpretation involves new proposals concerning the organization of magnetic monopoles (configurations) in various elementary particles. It is worth noticing that no other theory known today has been capable of calculating the masses of so many elementary particles by using so few free parameters (meaning parameters neither expressed in terms of universal constants nor calculated by the theory) and with a precision comparable to that obtained in the model presented here.

40586 **(INIS-mf—9692) Conservation of basic monopoles in decay processes.** Barricelli, N.A. (Oslo Univ. (Norway). Matematisk Inst.). 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781271.

The conversation law of basic monpoles and other rules followed by these monopoles in the formation and decay processes of elementary particles are presented and discussed. A new interpretation of the distinction between rapid decay process (commonly ascribed to weak interactions) is proposed.

40587 (INIS-SU—289, pp 3-7) **Basic problems of high energy physics.** Arbuzov, B.A. (Inst. Fiziki Vysokikh Ehnergij, Serpukhov, USSR). 1983. (In Russian). NTIS (US Sales Only), PC A17/MF A01. File Number DE85781267. (CONF-8210133—Vol.1).

From 8. All-Union conference on the charged particle accelerators; Protvino, USSR (19 Oct 1982).

The basic problems of high energy physics are considered. The important problem of strong interactions is to find out the nature of forces between quarks. In the superhigh energy range in collisions of particles and nuclei production of quark-gluon plasma is predicted. The studies of plasma parameters will allow to find out the details of quark and gluon interactions. In the range of weak and electromagnetic interactions the importance of detection of W- and Z-bosons, Higgs bosons and search for neutrino oscillations is shown. It is also shown that further development of the superunification theory and investigations of the quark and lepton structure is of great importance. 1 figure.

40588 **(ITEP—41(1984)) Distributions of valence quarks in hadrons at small x in QCD.** Ioffe, B.L.; Kaidalov, A.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701776.

Valence u- and d-quark distributions in nucleon and pion at small x ($x = -q^2/2nu$ is the fraction of the momentum carried by quarks) corresponding to rho and ω Regge pole exchange have been obtained on the basis of the QCD sum rule method. 6 references, 3 figures.

40589 **(ITF—84-94-R) Effect of hadrons multiple production on the thermodynamics of matter at ultrarelativistic temperatures.** Bugrij, A.I.; Trushevskij, A.A.; Shadura, V.N. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1984. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701777.

A representation for the equation of state of hadronic matter at ultrarelativistic temperatures is obtained in terms of multiplicity distribution function. The character of the equation of state is shown to be determined by the energy dependence of topological cross-sections σsub(n)(E) at n approximately equal to E. 9 references, 2 figures.

40590 **(ITP—83-128-E) Local anisotropy effects in the hydrodynamical theory of multiparticle production.** Gorenshtejn, M.I.; Sinyukov, Yu.M. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701778.

The stage of final particle formation in the hydrodynamic theory of multiparticle production is analysed. It is shown, that secondary particle spectrum of the fluid element decay to be anisotropic in the rest frame system of this element. 10 references, 2 figures.

40591 **(JINR—2-84-426) Production of meson pairs with large transverse momenta in hadron-nuclear interactions.** Dolidze, M.G.; Lykasov, G.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701784.

The dependence of spectra of symmetric meson pairs produced in h-A reactions on atomic number of a target-nucleus A in the quark model is analysed. It is shown that the A-dependence of meson pair Psub(perpendicular)-spectra is weaker than in the case of a single meson production due to suppression of the contribution of multiple quark collisions (Psub(perpindicular) is the meson transverse momentum). The comparison of theoretical calculations with experimental data at $E_0 = 70$ GeV and Psub(perpendicular) $>= 0.5$ GeV/c is given. 16 references, 3 figures.

40592 **(JINR—R-2-83-842) QCD sum rules of the finite energy type.** Ivanov, Yu.P.; Kovalenko, S.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701779.

Sum rules of the finite-energy type are discussed in the framework of quantum chromodynamics. It is shown that the sum rules can be obtained in the frame work of quantum chromodynamics for structure functions of deep inelastic scattering in the main logarithmic approximation of perturbation theory of quantum chromodynamics. 3 references.

40593 **(JINR—R-2-84-10) Description of π meson structure functions in a relativistic theory of bound states.** Kryuchkov, S.V.; Linkevich, A.D.; Savrin, V.I.; Sanadze, V.V.; Skachkov, N.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701780.

In the framework of covariant Hamiltonian formulation of quantum field theory the formulae for structure functions of deep inelastic lepton scattering on π-mesons are obtained. It is considered as the bound state of spinor quark and antiquark. scaling properties of structure functions are investigated, and comparison with experimental data is performed. It is shown that the character of scale violation is determined by wave functions of the bound state. 11 references, 4 figures.

40594 **(JINR—R-2-84-64) Analysis of experimental semi-inclusive distributions at the SPS collider energies.** Darbaidze, Ya.Z.; Sisakyan, A.N.; Slepchenko, L.A.; Torosyan, G.T. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701782.

From 22. International conference on high energy physics; Leipzig, German Democratic Republic (19-25 Jul 1984).

The experimental data on hadron-hadron interactions at up to sps collider energies are analyzed carefully within a multi-component (anti pp, pp,K^+ $^-$p, and π^{+-}r reactions) approach based on the renormalization group method. The approach gives the possibility of description of experimental regularities. In particular, the behaviour of total cross sections and forward-backward correlations of scattered particles is desribed as well as the broadening of

psub(t)-spectra with increasing multiplicity of charged particles and the sea-gull effect for eta-distributions observed at small multiplicities. 26 references, 6 figures.

40595 **(JINR—R-2-84-412) $Q_1 \rightarrow K(p,\omega)$ decays of Q_3-meson.** Volkov, M.K.; Khodzhaeva, Z.L. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701781.

The strong decays Qsub(1)→Ksub(rho) and Qsub(1)→Ksub(ω) are calculated in the quark model of the superconductivity type. 8 references, 1 figure.

40596 **(JINR—R-4-83-560) Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions.** Nikitiu, F.; Piradzhino, G.; Falomkin, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701783.

A simple model is proposed for the description of reactions involving the emission of single pion in anti pd-annihilation, and the emission of two negative pions in anti p^4He-annihilation. In the model account is taken of the connection between the above processes and the respective cross-symmetric reactions: pion absorption by deuterium and double charge exchange of a pion on the helium nucleus. Parallel investigation of the mentioned direct and cross-symmetric reactions is important for the understanding of particle absorption by correlated nucleons. 9 references, 5 figures, 1 table.

40597 **(KMU-HEP—84-05) Parton jet fragmentation at small momentum fraction (x).** Kirschner, R. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). May 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701785.

The parton fragmentation function is calculated at small x and the angular ordering condition is rederived by extending the method of separation of the softest particle, which is based on unitarity and gauge invariance.

40598 **(OUP—84-12) Semileptonic *DELTA*S=1 decays of baryons with boosted bags.** Eeg, J.O.; Lie-Svendsen, Oe. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1984. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781045.

Recoil effects for strangeness-changing semileptonic decays of baryons by means of boosted quark mode solutions of the MIT bag model is calculated. Both the quark and the psevdoscalar part of the axial current is considered. It is shown that the induced scalar form factor f*sb3* and the "weak electric" form factor g*sb2* are proportional to the mass difference of the final and initial baryon. Moreover, it is shown that the quark wave function mismatch, which decreases the conventional vector form factor f*sb1*, can be compensated by recoil effects. Thus a better agreement with experiment seems to be achieved.

40599 **(PUC-TN—05/82) Quark model with one-gluon corrections-radially excited states.** Amaral, M.G. do; Zagury, N. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). 1982. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781048.

Under the assumption that quarks are confined, in a first approximation, by a relativistic potencial $U(r) = 1/2(1+\beta)V(r)$, and taking in consideration one-gluon corrections, the mass spectrum for the first radially excited positive parity baryons is calculated.

40600 **(RAL—84-088) Electroweak interactions and new particle searches.** Marshall, R. (Rutherford Appleton Lab., Chilton (UK)). Aug 1984. 10p. (CONF-8408138—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85781047.

From 6. general conference of the European Physical Society; Prague, Czechoslovakia (27 Aug 1984).

Electroweak interactions are reviewed, from the time the neutrino first emerged to present day searches for new particles. In investigations of the electroweak interaction, the formation of "fermion-anti fermion" pair in e^+e^- accelerators is discussed, as well as a comparison of data with theory for leptons, quarks and flavours. A summary of electroweak analyses is given.

40601 **(RAL—84-094) Electroweak interference in e^+e^- annihilation.** Saxon, D.H. (Rutherford Appleton Lab., Chilton (UK)). Oct 1984. 21p. (CONF-8408141—7). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701772.

From 4. international conference on physics in collision; Santa Cruz, CA, USA (22 Aug 1984).

High precision results from PEP and the extended energy range of PETRA now allow accurate comparison of experimental results with theory. One-loop weak corrections have been calculated in both Weinberg-Salam and Glashow schemes and are needed in these comparisons. The Zsup(o) propagator effect is seen and the asymmetries agree, with a 7% error, with rho = 1. The μ-pair asymmetry is a little high. The effects of normalisation errors are discussed. The weak isospins of c- and b-quarks have been measured and are consistent with weak isodoublets, so that a t-quark is required by the asymmetry measurements.

40602 **(RAL—84-102) Supersymmetric models without R parity.** Ross, G.G.; Valle, J.W.F. (Rutherford Appleton Lab., Chilton (UK)). Nov 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781049.

The authors show that many supersymmetric models may spontaneously break R parity through scalar neutrinos acquiring a vacuum expectation value (vev). These models allow supersymmetric particles to be produced singly and to decay to nonsupersymmetric states. This leads to a new pattern of supersymmetric phenomenology. The lepton number violation to be expected in this class of models is discussed.

40603 **Bound states of heavy Q^2Q^2 systems.** Heller, L.; Tjon, J.A. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] D: Particles and Fields;* **32**: No. 3, 755-763(1 Aug 1985).

The Born-Oppenheimer approximation for heavy quarks in the MIT bag is extended to the Q^2Q^2 system, where the glue plus volume energy becomes an operator in color space. Taking its lowest eigenvalue as the approximate potential energy, the four-body Schroedinger equation is solved variationally for the ground-state energy. With this approximation, it is found that heavy-quark systems such as c^2c-bar^2 are stable against breakup into two psi (cc-bar) mesons. It is necessary to solve the coupled-channel (in color space) problem to confirm this result.

40604 **Cyclotron motion in a microwave cavity: Possible shifts of the measured electron g factor.** Brown, L.S.; Gabrielse, G.; Helmerson, K.; Tan, J. (Department of Physics, FM-15, University of Washington, Seattle, Washington 98195). *Physical Review Letters;* **55**: No. 1, 44-47(1 Jul 1985). Contract AC06-81ER40048.

The interaction of a bound electron with the radiation field produced by the image charges that represent a surrounding cavity produces a shift in its orbital frequency and in its radiative decay time. We calculate the frequency shift and the change in the damping constant for a cyclotron motion at the midpoint of a lossy, cylindrical cavity. The frequency shift can easily be so large as to have important consequences for the University of Washington g-2 measurements.

40605 **Light quark spectroscopy.** Aston, D. (Stanford Linear Accelerator Center, CA (USA)). pp 343-347A of Proceedings of HEP83. International Europhysics conference on high energy physics, Brighton (UK), 20-27 July, 1983. Guy, J. (Rutherford Appleton Lab., Chilton (UK)); Costain, C. (eds.). Chilton, England; Rutherford Appleton Laboratory (1983). (CONF-830718—). Contract AC03-76SF00515.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

The paper reviews light quark spectroscopy and the meson spectrum. Electromagnetic properties and leading resonances are described. The discussion of orbital and radial excitations includes:

40607 **(RAL—84-085) Phenomenology of supersymmetry with broken R-parity.** Ellis, J.; Gelmini, G.; Jarlskog, C.; Ross, G.G.; Valle, J.W.F. (Rutherford Appleton Lab., Chilton (UK)). Sep 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701701.

In some phenomenological supersymmetric models R-parity (+1 for particles, -1 for sparticles) is spontaneously broken along with tau lepton number L/sub tau/ by a vacuum expectation value v/sub tau/ of the tau sneutrino ν/sub tau/. In this paper the authors explore the phenomenological constraints on models with spontaneous violation of R-parity and L/sub tau/, and propose some experimental signatures.

40608 **Signals of CP nonconservation in hyperon decay.** Donoghue, J.F.; Pakvasa, S. (Department of Physics, University of Massachusetts, Amherst, Massachusetts 01002). *Physical Review Letters;* **55**: No. 2, 162-165(8 Jul 1985). Contract AM03-76SF00235.

We survey the CP-odd asymmetries which can signal CP nonconservation in hyperon decay. The optimal measurement involves the β parameter in the decay distribution, i.e., (β+beta-bar)/(β-beta-bar), which can be quite large in some models. Explicit calculations are provided for all the observables for several theories of CP nonconservation.

From NATO Advanced Study Institute on techniques and concepts of high energy physics; St. Croix, VI, USA (2 Aug 1984).

In these lectures the predictions are discussed for the, so called, standard model for the strong, weak and electromagnetic interactions. A set of exercises is included for understanding the material covered.

40611 **(DESY—85-009) More about the SU(2) 2^+ glueball state.** Kamenzki, H.; Berg, B. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Jan 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752010.

Within 4d SU(2) lattice gauge theory the 2^+ glueball is investigated. Using a recently proposed source we carry out a high statistics Monte Carlo calculation at β=2.25 and β=2.40. We obtain correlations up to distance t=3. For increasing distances we find a significantly decreasing m(2^+) mass.

40612 **(DESY—85-010) Have color octet vector bosons been found.** Cornet, F. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752018.

We study the interpretation of the CERN monojet and e jet + missing energy events in terms of a new triplet of color octet vector bosons, W vector$_8$. We show that they should also appear in photon-jet final states that will provide a clear signature on the existence of the W vector.

40613 **(DESY—85-013) Nonperturbative renormalization of quantum gauge theories.** Kerler, W. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Feb 1985. 56p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85752014.

A systematic nonperturbative formulation of quantum gauge theories is given, which defines the renormalized theory as an appropriate limit of a lattice-regularized one. First some features of the regularization in particular with respect to fermions and to gauge invariance are discussed. The conditions for the existence of the limit, which are those of general renormalizability, are worked out in detail. A fundamental parameter singularity and basic equivalence relations are important features. Mass scales and RG invariants are defined in a general way. Directly measurable quantities and order parameters are considered. Various types of β functions are studied. The present knowledge about fundamental singularities in specific theories and the urgent need to investigate ones with matter fields are discussed. The consequent manner of applying KW transformations to QFT and the occurring restrictions are pointed out. An additional condition arising for correlation functions and its implications for particular transformation types are considered. Using an appropriate auxiliary-parameter representation only long-distance properties of the action enter QFT and a characterization of its parameters becomes possible. The need of investigating suitable classes of KW transformations is stressed.

40614 **(DOE/ER/03130—371) Theoretical high-energy physics. Progress report, 1 January-31 December 1985.** Feldman, D.; Fried, H.M.; Jevicki, A.; Kang, K.; Tan, C.I. (Brown Univ., Providence, RI (USA). Dept. of Physics). 30 Jun 1985. Contract AC02-76ER03130. 17p. (BROWN/HET—560). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014446.

This year's research has dealt with: one-loop structure of spontaneously broken gauge theories and the contraction of symmetry groups; continuum strong coupling approximations by infrared extraction; methods of approximating ordered exponentials; field theoretic methods for viscous Navier-Stokes fluid flow; discretization method to quantum gravity and string field theory; skyrmions and solitons in field theory; nonlinear σ-models with Wess-Zumino type terms; a variety of grand unification models and family unification in grand unified theories; composite fermions; axions in superstring models; cosmological constraint on heavy particles; axion emissions in astrophysicial systems; calculability of flavor-mixings; a field theoretic understanding of the quantum Hall effect including scaling of effective θ-parameter for non-axionic explanation of strong CP invariance; correlation decay theorem at high temperature; axial anomaly in chirally invariant nonlocal lattice gauge theories; axial anomaly and index theorem for manifolds with boundary; nonperturbative aspect of lattice gauge theories; lattice QCD in

large N limit; quantum fluctuations of matter fields; and pregeometric quantum lattice. 40 refs.

40615 **(EFI—614(4)-83) Summation of diagrams by means of Legendre transformation in scalar parameter. Higher orders.** Ananikyan, N.S.; Balayan, G.L. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701724.

Results of the investigation of higher orders of diagram summation method by means of the Legendre transformation in scalar parameter are presented. The investigations show a number of advantages of such summation as compared with the standard perturbation theory. 4 references, 1 figure, 1 table.

40616 **(EFI—641(31)-83) Homogeneous models of Yang-Mills classical fields with external sources.** Arutyunyan, S.G.; Avakyan, N.R.; Baseyan, N.Z. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701725.

Homogeneous models of Yang-Mills classical fields with external static sources are considered. Numerical experiments on a computer are performed with the aim to clarify the influence of external sources on the homogeneous models stochasticity. 11 references, 7 figures.

40617 **(EFI—642(32)-83) Stochastic mechanism of symmetry breaking.** Baseyan, H.Z. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701736.

A new symmetry breaking mechanism conditioned by presence of random fields in vacuum is proposed. Massive Yang-Mills fields finally arise, that may be interpreted as macroscopic manifestation of the microscopic Yang-Mills massless theory. 5 references.

40618 **(IFT-P—05/84) Lattice supersymmetry for N=4 Yang-Mills Model.** Aratyn, H.; Zimerman, A.H. (Instituto de Fisica Teorica, Sao Paulo (Brazil)). 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701695.

A supersymmetric four-dimensional N = 4 Yang Mills Model on the space lattice is introduced. The construction involves Dirac-Kahler formalism. The Hamiltonian on the space lattice with the correct classical continuum limits is obtained.

40619 **(IFT-P—07/84) Infrared dimensional meromorphy of the massless lambda phi 4 model.** Malbouisson, A.P.C.; Camargo Filho, A.F. de; Pimentel, B.M. (Instituto de Fisica Teorica, Sao Paulo (Brazil)). 1984. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701696.

Some features of the infrared poles in space-time dimension of the Green functions for the Euclidean lambda phi 4 model are examined.

40620 **(IFT-P—08/84) Fractionization of the Witten index in some soluble models.** Alves, N.A.; Aratyn, H.; Zimerman, A.H. (Instituto de Fisica Teorica, Sao Paulo (Brazil)). 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701697.

The technique of analytic regularization is used to study the Witten index in two conformally invariant super-symmetric quantum mechanical models. The role of the non-normalizable zero-mode states is discussed in some detail.

40621 **(IFT-P—09/84) 2-d N=1 and 4-d N=2 Yang-Mills SUSY models on the lattice.** Aratyn, H.; Goto, M.; Zimerman, A.H. (Instituto de Fisica Teorica, Sao Paulo (Brazil)). 1984. 46p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701698.

Supersymmetric interacting models, like the two-dimensional N = 1 Wess-Zumino model and N=2 Yang-Mills theory, are constructed on the space lattice. The Becher-Joos techniques, for the Dirac-Kahler formulation on the lattice, are extensively used in order to obtain the supercurrents and Hamiltonians on the lattice, even in the interacting case. It is shown that it is possible to construct the invariant actions for these models with the correct classical continuum limit. The work is based on the new method of putting the fields in the adjoint representations on the lattice.

40622 (INIS-mf—9311, pp 237-259) **Testing the standard model via radiative corrections.** Sakakibara, S. (Mainz Univ. (Germany, F.R.). Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

I describe how to understand the nature of radiative corrections and what one can expect from their analysis. I start with examples in quantum electrodynamics (QED) that provide us with some keys to understand the nature of radiative corrections. Then the standard model is presented, and the relation of the gauge boson masses and the low-energy parameters is discussed in some detail.

40623 **(ITEF—176(1983)) Relativistic Rankine-Hugoniot equations with allowance for radiation and electron-positron pair production.** Morozov, Yu.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 54p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE85701726.

The Taub equations are derived and analysed with allowance for radiation effects and electron-positron pairs production. For perfect gas and an equation of state using γadiabate index a series of relatively simple solutions of these equations at various widely applied approximations is obtained. Equations of state for Maxwell particles momentum distribution and Fermi-Dirac distribution in non-vacuous approximation is in a form which permits analytical determination of the proper adiabaticity coefficients in approximate expressions for Taub equation solutions. The results of such calculations for a wide interval of values of initial densities are presented. 26 references, 2 figures, 2 tables.

40624 **(JINR—E-2-84-228) Vacuum problem in the Schwinger model.** Ilieva, N.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. (CONF-8404244—3). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701699.

From 7. all-union conference on problems of quantum field theory; Alushta, USSR (21 Apr 1984).

The Schwinger model with quantum motions of bosonic and fermionic vacua is considered. The physical vacuum is defined as a coherent state of the observable fields. Quark-condensate values are found, which depend on the gauge field topological degeneration parameter.

40625 **(JINR—E-2-84-257) Dynamic origin of Wess-Zumino massless model.** Chizhov, M.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 8p. (CONF-8404244—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701700.

From 7. all-union conference on problems of quantum field theory; Alushta, USSR (21 Apr 1984).

A local Lorentz-invariant Hermitian combination of (pseudo) scalar and Weyl spinor fields is used as an initial interaction in self-consistent equations of kinetic terms. The solution of these equations in an approximation of the leading logarithmic-divergent diagrams provides the supersymmetric Wess-Zumino massless model effectively.

40626 **(JINR—E-2-84-479) No anomaly is observed.** Avdeev, L.V.; Kazakov, D.I.; Tarasov, O.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701727.

The two-loop anomaly in supersymmetric gauge theories discussed in a recent paper by R. van Damme and G. 't Hooft is considered. We find that this is due to some mistakes in calculations. In fact, it is possible to transform the theory regularized by the conventional dimensional regularization into the dimensionally reduced one by means of finite local counter-terms. So, no anomaly is observed. 17 references, 1 figure.

40627 (JINR—E-2-84-499) Formulation of euclidean QED manifestly obeying conditions of gauge, translational and rotational invariance. Zastavenko, L.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701737.

The Euclidean QED is considered in order to get its formulation which would be simultaneously and manifestly invariant under gauge transformations, translations, and rotations. The main point of the consideration is the introduction, instead of usual variables Asub(μ), phi, of gauge-invariant variables Bsub(μ), eta through the equations Bsub(β) = Asub(β)-dβlambda, eta = exp[-ielambda]phi, lambda = $<L>^{-1}$dβAsub(β), where $<L>$ -4-dimensional Laplace operator. Using correspondingly transformed Lagrangian one could construct Green functions which are invariant under the above three groups of transformations. One may hope to get the Green functions of the usual pseudo-Euclidean QED through an analytical continuation of our Green functions. Such pseudo-Euclidean Green functions will be, probably gauge invariant under Lorentz transformations, and translations. So, one would get the formulation of the pseudo-Euclidean QED which is, probably, manifestly gauge and Poincare invariant. 6 references.

40628 (JINR—E-2-84-660) Six- and eight-dimensional gluon condensates from lattice QCD. Makhaldiani, N.; Muller-Preussker, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701728.

The $<G\gamma 3>$ and $<G^4>$-type gluon condensates are estimated from expectation values of appropriate lattice operators which have been evuluated by Monte-Carlo simulation of lattice QCD in quenched approximation. The $<G\gamma 4>$ values found indicate a strong violation of the factorization hypothesis $<G^4>$ approximately $<G^2>^2$. 18 references, 5 figures, 2 tables.

40629 (JINR—R-2-84-229) New procedure for finite-dimensional approximations of path integrals. Fiziev, P.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701729.

From 7. All-union conference on problems of quantum field theory; Alushta, USSR (1984).

It is found out that for the calculation of path integrals one should take into account the presence of an infinite dimensional group of homotopical path transformations on the Mayer foliation of phase space of the mechanical system, transformations under which the classical action is invariant. A procedure for factorization of the Faddeev-Popov type over the volume of this group in the path integral is suggested. It is based on a new formula for matrix elements of the evolution quantum operator during short times. It enables one to obtain a space of quantum states with its metric, a new rule of correspondence between classical and quantum quantities, and a quantum propagator. Relation between classical and quantum symmetries is discussed. Application of the procedure proposed for calculating path integrals is exemplified. 42 references.

40630 (JINR—R-2-84-458) Stochastic quantization of Abelian fields. Buzhek, V.; Ibadov, R.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701730.

A modified version is proposed for the stochastic quantization of gauge Abelian fields, in which the field evolution in a fictitious time is described by the Langevin equation. The right-hand side of this equation contains the variational derivative of the free action only. In this approach noise is responsible for quantization of the classical system and interaction in it. It is shown by the scalar electrodynamics that this method allows quantization of Abelian fields without gauge fixation. 6 references.

40631 (JINR—R-2-84-466) About quantum energy-momentum tensor for the Thirring model. Stoyanov, D.Ts.; Khadzhiivanov, L.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701731.

A possibility to construct an improved energy-momentum tensor for the quantum Thirring model is considered. Using the bozonization method, the equivalence of both expressions for this tensor, that are currently used in the literature, is proved. This leads to the appearance of the Virasoro algebra in this model too. The quantum Lagrangian is also obtained, that gives rise to the renormatlized Thirring equation. 21 references.

40632 (JINR—R-2-84-672) Hybrid model of the chiral field and relativistic string. Isaev, A.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701732.

A two-dimensional model, which has the features of the chiral field model with the Wess-Zumino term and of the relativistic string model, is considered. An auxiliary spectral problem for this model in the Hamiltonian approach is constructed and a generating function for an infinite number of involutory integrals of motion is obtained. 9 references.

40633 (KMU-HEP—84-03) Improved mean-field calculation for the lattice Abelian Higgs model. Pertermann, D. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Apr 1984. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701733.

We consider the lattice Abelian Higgs model with frozen radial degrees of freedom using the mean-field approximation with corrections. The free energy corrections contain essential 0(1) and 0(1/d) terms. In the weak coupling region the behaviour of the frequencies arising in the expansion of action allows to distinguish the Higgs from the Coulomb phases. Analytical results are presented for all phase transition lines. The phase structure obtained is in qualitative agreement with Monte-Carlo calculations for Higgs charges q = 1, 2 and 6.

40634 (KMU-HEP—84-04) Stochastic quantization and supersymmetry. Kirschner, R. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Apr 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701738.

In the last years interest in stochastic quantization has increased. The method of quantization by stochastic relaxation processes has been proposed by Parisi and Wu, inspired by the extensive application of Monte Carlo simulations to quantum systems. Starting with the classical equations of motion of the system (field theory) and adding random force terms - the random force obeys a Gaussian distribution (white noise) - stochastic differential equations are obtained, in this context called Langevin equations, which are a central object in the theory of stochastic processes.

40635 (KMU-HEP—84-06) Stochastic quantization of gauge theories. Kirschner, R. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). May 1984. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701734.

The stochastic relaxation system describing an n - dimensional gauge theory is formulated as a field theory in a superspace consisting of the n space dimensions, the additional time and two Grassmann variables. It is established the relation of the superspace field theory and the n - dimensional gauge theory. The Langevin equation is derived for the abelian case. There is no unbounded diffusion along the gauge orbits. The resulting random force is not a white-noise process.

40636 **(KMU-HEP—84-07) Monte Carlo study of a 1+1 dimensional N=2 Wess-Zumino model on the lattice in the local Hamiltonian method.** Schiller, A.; Ranft, J. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Jun 1984. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701735.

Based on a supersymmetric subalgebra involving only the Hamiltonian the lattice N=2 Wess-Zumino model in 1+1 dimensions is formulated in such a way that it can be investigated within the local Hamiltonian Monte Carlo method. It is found evidence for the existence of topological excitations in the model, but no evidence is found for the breaking of supersymmetry within numerical accuracy.

40637 **(LBL—19671) Classical geometrical interpretation of ghost fields and anomalies in Yang-Mills theory and quantum gravity.** Thierry-Mieg, J. (Lawrence Berkeley Lab., CA (USA); Centre National de la Recherche Scientifique, 92 - Meudon-Bellevue (France)). 14 May 1985. Contract AC03-76SF00098. 7p. (CONF-8503141—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014537.

From Symposium on anomalies, geometry and topology; Argonne, IL, USA (28 Mar 1985).

The reinterpretation of the BRS equations of Quantum Field Theory as the Maurer Cartan equation of a classical principal fiber bundle leads to a simple gauge invariant classification of the anomalies in Yang Mills theory and gravity.

40638 **(SLAC-PUB—3698) Holonomy anomalies.** Bagger, J.; Nemeschansky, D.; Yankielowicz, S. (Harvard Univ., Cambridge, MA (USA). Lyman Lab. of Physics; Stanford Linear Accelerator Center, CA (USA)). May 1985. Contract AC03-76SF00515. 5p. (CONF-8503141—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014354.

From Symposium on anomalies, geometry and topology; Argonne, IL, USA (28 Mar 1985).

A new type of anomaly is discussed that afflicts certain nonlinear sigma models with fermions. This anomaly is similar to the ordinary gauge and gravitational anomalies since it reflects a topological obstruction to the reparametrization invariance of the quantum effective action. Nonlinear sigma models are constructed based on homogeneous spaces G/H. Anomalies arising when the fermions are chiral are shown to be cancelled sometimes by Chern-Simons terms. Nonlinear sigma models are considered based on general Riemannian manifolds. 9 refs. (LEW)

40639 **Nonperturbative propagators in quantum chromodynamics.** Larsson, T.I. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **32**: No. 4, 956-961(15 Aug 1985). Contract AC03-76SF00515.

Leading nonperturbative corrections to the quark and gluon propagators are derived following the assumption that the nonperturbative QCD vacuum can be described in terms of nonvanishing vac- uum expectation values for the composite operators [psi-barpsi] and [G/sub munu/ ²]. The nonperturbative quark propagator can be described in terms of a running gauge-dependent quark mass and a running normalization function. The nonperturbative gluon propagator can be described in terms of a running gauge parameter and a running normalization function.

40640 **New stochastic algorithm and its application to compact QED.** Dahl, D.; Blankenbecler, R. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **32**: No. 4, 977-985(15 Aug 1985). Contract AC03-76SF00515.

A new stochastic algorithm for calculating the properties of Hamiltonian lattice field theories is described. This approach improves the efficiency as well as the statistical accuracy of projector-method simulations. As an example, this new method (called parallel scoring) is applied to periodic QED. Parallel scoring is the software equivalent of parallel processing. Its advantages and disadvantages are illustrated and discussed. Numerical results from the application of the parallel-processing algorithm to periodic QED in two space dimensions are presented and compared to earlier work.

40641 **A three level atom with quantized field modes and coherent trapping.** Yoo, H.I. (Department of Physics and Astronomy, University of Rochester, Rochester, NY). pp 1033-1036 of Coherence and Quantum Optics V. Mandel, L.; Wolf, E. New York, NY; Plenum Press (1984). (CONF-830616—).

From 5. Rochester conference on coherence and quantum optics; Rochester, NY, USA (13 Jun 1983).

A coherent trapping phenomenon for the level population of a threelevel atom, which takes place on two-photon resonance, has been noted and well-studied by a semi-classical approach where the classical electromagnetic fields are regarded as given. In this paper, the authors deal with a closed system of one or two quantized field modes and a three-level atom (Λ-type) interacting with each other via the non-vanishing atomic dipole matrix elements d_{12} and d_{23}. It is shown that the condition for the coherent trapping determines not only the atomic state but also the field state for the two mode case. In the two mode case, mode l (left) couples with the atom by d_{12} and mode r (right) by d_{23}. The one mode case with its frequency w can be regarded as a special case of the two modes with w / sub l/ = w /sub r/ = w.

40642 **Status of perturbative QCD.** Ellis, R.K. (Istituto Nazionale di Fisica Nucleare, Rome (Italy); Fermi National Accelerator Lab., Batavia, IL (USA)). pp 191-195 of Proceedings of HEP83. International Europhysics conference on high energy physics, Brighton (UK), 20-27 July, 1983. Guy, J. (Rutherford Appleton Lab., Chilton (UK)); Costain, C. (eds.). Chilton, England; Rutherford Appleton Laboratory (1983). (CONF-830718—).

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

In this paper the status, within the framework of perturbative QCD is discussed, of four topics which have received theoretical attention in the last year. They are, jets at the CERN Sp p bar S collider, power corrections to leptoproduction, hard scattering off nuclear targets, the photon structure function.

6455 Scattering Theory

40643 **(PB—85-189462) Coincidence form factors in electron scattering. Final report.** O'Connell, J.S. (National Measurement Lab., Washington, DC (USA). Nuclear Radiation Div.). 1984. 21p. Published in Proceedings of Workshop of the Bates Users Theory Group (3rd), Massachusettes Institute of Technology, Cambridge, MA, July 23-24, 1984, p1-21.

Sponsored by Connecticut Univ. Research Foundation, Storrs.

The two-body breakup cross section of inelastic electron scattering is presented and discussed. Examples of model calculations and some data are given for resonances, direct reactions, pion production, and scattering from quarks.

REFER ALSO TO CITATION(S) 39173, 39174, 40498

40644 **(BNL-NCS—51771-Ed.1-Suppl.1) Integral charged particle nuclear data bibliography. Literature scanned from April 1, 1984-March 31, 1985. First edition, Supplement 1.** Holden, N.E.; Ramavataram, S.; Dunford, C.L. (Brookhaven National Lab., Upton, NY (USA)). Apr 1985. Contract AC02-76CH00016. 59p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE85014388.

The literature cited cover data on collisions in which the incident particle energy has a minimum energy of less than 100 MeV in the laboratory system, the data including excitation functions, or thick target or product yields leading to the formation of a ground or metastable state. Such quantities are included as fission yields, isomeric ratios, and excitation functions for specific particle groups

where such data readily yield information on the excitation functions or thick target yields for the ground or metastable state. Selected compilations, evaluations, and reviews of charged-particle nuclear data are also listed. The bibliography is indexed by target and by residuals. (LEW)

40645 **(CEA-N—2406) Theoretical approaches to heavy ion reaction mechanisms. Proceedings.** Lepage, F. (ed.). (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). 1984. 181p. (CONF-8405179—). NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948.

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

This booklet contains copies of the short written contributions to the Paris Conference (14-18 May 1984). Some of the authors have wished to present it orally in a special session. Its program will be found in the proceedings of the Conference published by Nuclear Physics.

40646 **(CONF-850507—46) Summary talk covering application-oriented sessions.** Peelle, R.W. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014649.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Some progress is mentioned in nuclear data, including: nonfuel actinide cross sections, fusion charged particle reactions, lithium-7 breakup reaction, neutrons per fission, decay heat from fission products, the form of the fission spectrum, and neutron scattering differential cross sections. Trends are then identified, particularly N(E,t) for delayed neutrons, internationally focussed efforts to resolve outstanding problems, dosimetry cross sections and techniques, fusion integral experiments, data adjustment, rigorous analysis of differential data, reconsideration of "completed" data areas, and particle emission cross sections for fusion systems. Challenges pertaining to data for applications are listed, including neutron kerma data for neutrons above 10 MeV, helium production from neutrons on boron-10, the resonance and thermal regions of fuel nuclides, and tightening of accuracies. (LEW)

40647 **(CRN-PN—84-10) Isobaric mass equation for A=1-45 and systematics of Coulomb displacement energies.** Antony, M.S.; Britz, J.; Bueb, J.B.; Pape, A. (Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires). Jun 1984. 71p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85751938.

The mass excesses of members of T=1/2, 1, 3/2 and 2 multiplets are tabulated for A< = 45 and the coefficients of the isobaric multiplet mass equation are evaluated. Also given are the isovector and the isotensor parts of the Coulomb energy, their associated matrix elements reduced with respect to isospin, nuclear radii, and Coulomb displacement energies. The data and systematics are presented in 11 tables and 15 figures.

40648 **(GSI—84-89-Prepr.) New insight into relativistic heavy ion physics through 4π data.** Gutbrod, H.H.; Doss, M.; Gustafsson, H.A.; Kolb, B.; Loehner, H.; Ludewigt, B.; Poskanzer, A.M.; Ritter, H.G.; Wieman, H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Nov 1984. 23p. Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt, Germany, F.R.

We have a look at the question of thermalization - global or local, a look at the various apparent temperatures, the cluster production, the emission patterns and the sizes of the emitting systems.

Russian original distributed as INDC(CCP)-213/G.

Separate entries were prepared for the three papers entitled: Investigation of the Mechanism of Fast Neutron Scattering by Even Isotopes of Molybdenum; Evaluation of Fast-Neutron Radiative Capture Cross-Sections for Samarium and Europium Odd Isotopes; and Covariance Matrix of Experimental Data on the Energy Dependence of anti nu/sub p/ for Neutron-Induced Fission of the Nuclei ^{233}Th, ^{236}U, ^{238}U, ^{237}Np. (WHK)

40650 (JINR—D-7-83-644, pp 526-530) **Experimental program at GANIL.** Detraz, C. 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The experimental program at GANIL is briefly discussed. The ion velocities provided by GANIL allow to study the evolution from the mean field description of the nuclear system produced in a nucleus-nucleus collision to the many individual nucleon description when the energy of the projectile increases from 10 to 100 MeV per nucleon. The main features of the nuclear physics program (reaction mechanism studies, production of exotic nuclei and so on) are considered. Some first physics results are presented.

40651 (NEANDC(J)—100/U, pp 1-22) **Fission product and actinide data status in ENDF/B.** England, T.R.; Young, P.G.; Schenter, R.E.; Mann, F.M.; Reich, C.W. (Los Alamos National Lab., NM). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

In this report, we direct our comments at the improvements we feel are needed for ENDF/B-VI, irrespective of the time scale or probability of implementation. Additionally, we limit our considerations to fission products and heavy nuclides (which we loosely call actinides) and specifically to plans at Los Alamos National Laboratory (LANL), Hanford Engineering and Development Laboratory (HEDL), and Idaho National Engineering Laboratory (INEL). In our coverage we emphasize cross sections and yields for fission products and decay data for both fission products and actinides. We do not attempt complete coverage of planned evaluations of actinide cross sections nor other ENDF/B general and special purpose files (e.g., General Purpose, Activation, Standards, etc.), although some of the data we cite lies in those files. However, our summary of data content in the current ENDF/B-V files is complete for fission products and actinides. Section II compares the content of Versions IV and V of ENDF/B and provides references for more complete descriptions of the fission product and actinide data files. The Pandemonium problem is described in Sec. III, and illustrations of discrepancies between experimental and calculated results that we attribute to this effect are given. Section IV summarizes the data expansion that is planned for ENDF/B-VI in the areas of fission-product yields and cross sections as well as decay data for fission products and actinides. Finally, our concluding remarks are given in Sec. V.

40652 (NEANDC(J)—100/U, pp 23-30) **Evaluation of fission product neutron cross sections for JENDL.** Kawai, M.; Iijima, S.; Kikuchi, Y.; Nakajima, Y.; Nakagawa, T.; Watanabe, T.; Sasaki, M.; Aoki, T.; Matsunobu, H.; Zukeran, A. (Japan Atomic Energy Research Institute, Tokai). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

Results of integral tests of JENDL neutron cross sections are reported. Comparisons are given between calculated and experimental results for a number of nuclei. Improvements incorporated in JENDL-2 are briefly outlined and plans for further testing are described.

40653 (NEANDC(J)—100/U, pp 31-39) **Present status and future programs of evaluation of decay heat for fission products in Japan.** Matumoto, Z.; Akiyama, M.; Nakasima, R.; Tasaka, K.; Katakura, J.; Ihara, H.; Yoshida, T.; Iijima, S. (Japan Atomic Energy Research Institute, Tokai). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

Decay powers and decay heat from the fission of U-235 and Pu-239 calculated using JNDC, Version 1 data are presented and compared with experimental data. JNDC, Version 1.5 was made to attempt to resolve discrepancies between the calculated and experimental data. Results for decay powers for this version are given. Plans for further evaluation of the data base are described.

40654 (NEANDC(J)—100/U, pp 40-41) **Fission product nuclear data measurements and evaluations at the Studsvik Science Research Laboratory.** Rudstam, G. (Studsvik Science Research Lab., Nykoeping, Sweden). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

The experimental program is focused on fundamental studies of short-lived fission products. This program comprises measurements of specific properties such as total β decay energies, half-lives, and the emission of delayed neutrons. More complete spectroscopic investigations are carried out for especially interesting nuclides. Because of the great importance of macroscopic effects of the fission products in nuclear fuel the group is also engaged in applied research with the view to measure certain quantities and to evaluate integrated effects. Examples of this is the β part of the decay heat, the delayed-neutron energy spectrum and its time dependence, and the fission yields. The decay heat problem is also attacked by integral measurements of the β and γ spectra emitted from irradiated fissile nuclides using a Van de Graaff-accelerator.

40655 (NEANDC(J)—100/U, pp 42-46) **Decay heat calculation with the C.E.A. radioactivity data bank.** Duchemin, B.; Blachot, J.; Nimal, B.; Nimal, J.C.; Veillaut, J.P. (CEN Saclay, Gif Sur Yvette, France). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

For a long time the French CEA has developed a radioactivity data bank. This bank is updated using ENSDF and some recent experimental results. The fission product part of this library is currently used for shielding source and decay heat calculations. A computer code called PEPIN, using direct summation method has been developed and is briefly described. A comparison is made with other calculations and available experiments.

40656 (NEANDC(J)—100/U, pp 47-54) **Measurements of global fission products cross sections in PWR spectrum.** Gaucher, P.; Deidier, L.M. (Centre d'Etudes Nucleaires de Cadarache, Saint-Paul-lez-Durance, France). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

Fission product absorption is very important in power reactors: for a large part, the reactivity loss during irradiation is due to the fission product capture. With the exception of 135 Xe, this absorption leads during one reactor cycle to a loss of around 3000-3500 pcm in reactivity, whereas the total loss due to fuel spending is of around 6000 pcm. 72% of this effect comes from the following nuclides: 147 Pm, 149 Sm, 152 Sm, 95 Mo, 99 Tc, 103 Rh, 131 Xe, 133 Cs, 143 Nd, 145 Nd. The remaining 28% comes from a very large number of nuclides. In fact, for power reactor calculations, only global fission product absorption is needed. Experimental programs developed in France are therefore based on direct measurements of the global effects of spent fuel fission products, in order to qualify calculation means. Some methods and results are described here.

40657 (NEANDC(J)—100/U, pp 55-60) **Some investigations on the contribution of the internal conversion process to the decay heat of a LMFBR.** Karouby-Cohen, N. (Centre d'Etudes Nucleaires de Cadarache, Saint-Paul-lez-Durance, France). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

The internal conversion process contributes not negligibly to the total decay heat. The contribution of this phenomenon has been investigated using BLACHOT-FICHE data. This study has shown the importance of internal conversion process for the calculation of the decay heat of fission products, i.e. up to 10 divided by 15%. It has also shown the need of reliable and precise data on the internal conversion process in this type of decay data libraries.

40658 (NEANDC(J)—100/U, pp 61-74) **Model for fission-product calculations.** Smith, A.B. (Argonne National Lab., IL). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

Many fission-product cross sections remain unmeasurable thus considerable reliance must be placed upon calculational interpolation and extrapolation from the few available measured cross sections. The vehicle, particularly for the lighter fission products, is the conventional the optical-statistical model. The applied goals generally are: capture cross sections to 7-10% accuracies and inelastic-scattering cross sections to 25-50%. Comparisons of recent evaluations and experimental results indicate that these goals too often are far from met, particularly in the area of inelastic scattering, and some of the evaluated fission-product cross sections are simply physically unreasonable. An example of these discrepancies is shown. The evaluated inelastic-scattering cross sections of palladium are nearly a 100% discrepant with observation and the isotopes are prominent fission products with large inelastic-scattering cross sections at relatively low energies. It is difficult to avoid the conclusion that the models employed in many of the evaluations are inappropriate and/or inappropriately used.

40659 (NEANDC(J)—100/U, pp 75-99) **Fission product nuclear data measurements at the JAERI linac.** Mizumoto, M.; Nakajima, Y.; Ohkubo, M.; Sugimoto, M.; Furuta, Y.; Kawarasaki, Y. (Japan Atomic Energy Research Institute, Tokai). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

Neutron cross sections of fission products are of great importance for reactor application, although it seems that the emphasis on the needs of more accurate data is gradually decreasing partly due to financial problems for fast reactor development program. But, average capture cross sections in the keV region have been still requested in WRENDA with high priority. A systematic study of the average properties of resonance parameters, strength functions and level spacings provides valuable information in order to understand neutron interaction mechanism with nuclei. The measurements of fission product cross sections carried out at the JAERI Linac were reviewed by Yamamuro and Asami in the 1979 Bologna FP specialist meeting. In the present report, the only recent results since 1980 will be summarized. Some of these experimental results have been already published elsewhere.

40660 (NEANDC(J)—100/U, pp 100-107) **Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126.** Igashira, M.; Udagawa, K.; Natsume, T.; Fukui, H.; Shimizu, M.; Komano, H.; Kitazawa, H.; Yamamuro, N. (Tokyo Institute of Technology, Japan). Oct 1984. JAERI, Tokai-mura, Naka-gun, Ibaraki-ken 319-11, Japan. File Number TI85901067. (JAERI-M—84-182; CONF-8403179—).

From NEANDC topical conference on measurements and evaluations of nuclear data and decay heat for fission products; Tokai-mura, Japan (14 Mar 1984).

The authors have measured capture γ-ray spectra of Pr, Tb, Ho, Ta and Au with keV neutrons and observed the pygmy resonance in all these spectra. Remarkable features of the pygmy resonance were found to be that with neutron number the resonance energy increases linearly and the electric dipole strength exhausted in the resonance increases exponentially.

40661 **(ZfK—530) Joint annual report 1983. [Nuclear physics research at ZFK Rossendorf and other GDR institutions].** Hennig, K. (ed.). (Bergakademie Freiberg (German Democratic Republic). From 4. topical conference on computerized data acquisition in particle and nuclear physics; Chicago, IL, USA (19 May 1985).

The data acquisition architecture planned for experiment E802 is described. A VAX 11/785 will be front-ended by a VME-based array of 68000-family microprocessors, which will be used as intelligent CAMAC crate controllers, event builders, and to augment the computing power of the VAX for on-line analysis of the data. 4 refs.

40664 **(BNL—36646) Neutron resonance averaging with filtered beams.** Chrien, R.E. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 20p. (CONF-850635—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014191.

From 4. international symposium on neutron induced reactions; Smolenice, Czechoslovakia (17 Jun 1985).

Neutron resonance averaging using filtered beams from a reactor source has proven to be an effective nuclear structure tool within certain limitations. These limitations are imposed by the nature of the averaging process, which produces fluctuations in radiative intensities. The fluctuations have been studied quantitatively. Resonance averaging also gives us information about initial or capture state parameters, in particular the photon strength function. Suitable modifications of the filtered beams are suggested for the enhancement of non-resonant processes.

40665 (INIS-mf—9573-Vol.1, pp 96-167) **Nuclear physics and nuclear instrumentation.** Martinez Lugo, R.; Robles Galvez, J.C. (Instituto Nacional de Investigaciones Nucleares, Mexico City). 1981. (In Spanish). NTIS (US Sales Only), PC A09/MF A01. File Number DE85781445.

From International training course on the use of radiation and isotopic techniques in soil-plant relationships; Irapuato (Mexico) (3 Nov - 11 Dec 1981).

The study of radioactivity is introduced, explaining the radioactive decay law and the radionuclide table; so too, the interaction between the matter and the radiation is explained. Also described is the technique used to detect the presence of nuclear radiation and to determine its intensity, its energy and its associated properties. At the same time are given the basis for the instrumentation selection that will be used in that radiation measurement, equally given is the accepted rules for the designment and construction of nuclear instrumentation at a laboratory level and different instruments are illustrated built in modular form under the accepted rules.

40668 **(BNL-NCS—36553) Light mass elements total half-lives for selected long-lived nuclides.** Holden, N.E. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 12p. (CONF-8506130—4). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014217.

From International Committee for Radionuclide Metrology meeting; Grenoble, France (3 Jun 1985).

In the past, many compilations and evaluations of half-lives have been made which have uncritically accepted authors' values and uncertainties. They have merely recommended weight-averaged reported results. This evaluation attempts to reanalyze each experiment in the literature including an estimate of the standard deviation utilizing, where possible, an estimate of the systematic error. This paper constitutes a preliminary step in the process of

recommending values. The long-lived nuclides of light elements are of interest for their use in dating methods and for calculating cosmic-ray exposure ages of meteorites. Experimental data on the half-lives of selected nuclides have been evaluated and recommended values and uncertainties are presented for the following nuclides: ^{3}H, ^{10}Be, ^{14}C, ^{26}Al, ^{39}Ar, ^{40}K, ^{50}V, ^{53}Mn, ^{70}Ge, ^{87}Rb, ^{93}Nb, ^{107}Pd, ^{113}Cd, ^{115}In and ^{123}Te. The impact of the recommended ^{14}C half-life of 5715 years on the carbon dating technique, which uses the Libby value of 5568 years, will be discussed. Also the possible primordial occurrence of ^{92}Nb is now definitely ruled out by the recommended half-life of 3.7×10^{7}. Finally, based on the recommended ^{26}Al half-life value, the ^{21}Ne production rate for calculating cosmic-ray exposure ages remains too high, compared to rates using the ^{53}Mn and ^{10}Be half-life values. 15 tabs.

40669 (CEA-N—2406, pp 64-68) **Microscopic molecular picture of the ^{12}C-^{12}C scattering.** Hahn, D.; Scheid, W. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

In the framework of the two-center shell model we have developed a molecular reaction theory for the scattering of light nuclei. As basis states we use molecular particle-hole states, where the spurious motion is projected out. With the Tamm-Dancoff method we obtain molecular intrinsic states of the ^{12}C-^{12}C system.

40670 (DOE/ER/53179—T4) **Nuclear spin-polarized HD, D_2, HT and DT solids, liquids and high density gases. Quarterly status report No. 5, March 1, 1985-May 31, 1985.** (Syracuse Univ., NY (USA). Dept. of Physics). 27 Jun 1985. Contract FG02-84ER53179. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014136.

Success is reported in attaining extremely pure o-D_2 in the 0.997-0.999 range by symmetry species conversion at a temperature of 4K on a partially activated charcoal catalyst. Spin-lattice relaxation times have been improved to over 1 minute. Long storage times and the possibility of liquefication without depolarizing the o-D_2 are expected. Super-pure o-D_2 may also be used to probe magnetic impurities on surfaces. In addition, 50 kV "white spectrum" x-ray irradiated solid D_2 experiments have yielded information on defect generation rates and defect lifetimes, as well as their effect on para-ortho D_2 conversion. Experiments have also been begun in epitaxial deposition of D_2 on HD, and HD on mostly p-H_2. Tests of a dilution refrigerator have been completed. (LEW)

From 6. international symposium on polarization phenomena in nuclear physics; Osaka, Japan (26 Aug 1985).

The aim of the experiment reported was to make a precise test of the enhanced pion field model in a medium-energy scattering experiment. The quantity probed is the spin-longitudinal response function, a measure of the nuclear pion density which is used explicitly in the pion-excess models of the EMC effect. The point of reference used is deuterium. The spin-dependent response functions for heavy targets and ^{2}H are compared using identical experimental techniques. The technique of complete polarization transfer is used to separate the spin-longitudinal and spin-transverse response in the continuum. The experiment consisted of precise determinations of the polarization transfer coefficients for 500 MeV protons inelastically scattered from Pb, Ca, and ^{2}H. The experiment utilized longitudinal, sideways, and normal polarized beams in conjunction with final polarization analysis from the focal-plane polarimeter of the high-resolution spectrometer. Quantities constructed from these data are the longitudinal and transverse spin-flip probabilities. Calculations were performed of the ratio of longitudinal to transverse response functions and of the EMC effect with the same model. No evidence was found for collectivity in the isovector spin-longitudinal response function. 10 refs. (LEW)

40675 (LBL—19795) **Spin polarization effects in the $^{3}H(d,n)^{4}He$ fusion reaction.** Conzett, H.E.; Rioux, C. (Lawrence Berkeley Lab., CA (USA)). Jun 1985. Contract AC03-76SF00098. 4p. (CONF-850807—4). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015253.

From 6. international symposium on polarization phenomena in nuclear physics; Osaka, Japan (26 Aug 1985).

A recent investigation has shown that the $^{3}H(d,n)^{4}He$ fusion reaction rate could be enhanced by a factor of 3/2 if the fusion plasma consisted of both polarized deuterons and tritons, forming exclusively the channel-spin $S = 3/2$, $J = 3/2^{+}$ state. This result follows simply from the statistical weights of the quartet $S = 3/2$ and doublet $S = 1/2$ initial states, with the assumption of the single $J = 3/2^{+}$ reaction amplitude. Since, with a small but nonzero $J = 1/2^{+}$ amplitude, the maximum enhancement of the reaction occurs at the peak of the $J = 3/2^{+}$ resonance, corresponding to a deuteron lab energy of 107 keV, it is of obvious interest to know what the enhancement would be at the lower energies that are typical of fusion plasmas. We are able to address this question by extending earlier calculations which gave the values of all of the spin-polarization observables at this $J = 3/2^{+}$ resonance in both the $^{3}H(d,n)^{4}He$ and the $^{3}He(d,p)^{4}He$ reactions.

40676 **Faddeev Calculation of three-nucleon force contribution to triton binding energy.** Chen, C.R.; Payne, G.L.; Friar, J.L.; Gibson, B.F. (Department of Physics and Astronomy, University of Iowa, Iowa City, Iowa 52242). *Physical Review Letters;* 55: No. 4, 374-377(22 Jul 1985).

The configuration-space Faddeev equations are solved for Hamiltonians that include the Tucson-Melbourne and Brazil three-nucleon forces. Convergence in terms of the number of three-body partial waves is established. First-order perturbation-theory results are shown to be inadequate. Both three-nucleon forces produce approximately 1.5-MeV additional binding, which overbinds the triton.

40677 **Microscopic analysis of ^{6}Li (p, vector p)g.s. and ^{6}Li (p, vector p') (2.18 MeV) analyzing powers at 25, 35, and 45 MeV.** Poppe, C.H.; Dietrich, F.S.; Rowley, D.; Conzett, H.E.; Eversheim, D.; Rioux, C. (Lawrence Livermore National Lab., CA). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 226(1983). (CONF-821050—). Contract W-7405-ENG-48.

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

The analyzing powers were measured for proton scattering to the ground state (1^+; T=0) and first excited state (3^+; T=0) of ^{6}Li at incident energies of 25, 35 and 45 MeV using the polarized beam of the LBL 88 in. cyclotron. ^{6}Li was chosen because a recent study of the Li isotopes described successfully various (p,p') and (p,n) cross sections in terms of a realistic effective force, however, analyzing powers were not treated. In the present work inelastic analyzing powers and cross sections are compared to Born approximation calculations which use the density-dependent complex central interaction of Brieva and Rook and the real spin-orbit and tensor interactions of Elliott. 2 references.

Dept. of Physics; Argonne National Lab., IL (USA)). 1985. Contract W-31-109-ENG-38. 4p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85013873.

From 6. international symposium on polarization phenomena in nuclear physics; Osaka, Japan (26 Aug 1985).

Progress is reported on a new measurement of the beta decay asymmetry in ^{8}Li. Polarized ^{8}Li is produced via the reaction ^{7}Li(d,p)^{8}Li using vector polarized deuterons from a crossed beam polarized source. Plastic scintillation electron counters are used to measure asymmetry, tensor polarization correlation and to monitor beam current. Results are graphed and systematic error sources are discussed. 4 refs. (LEW)

From JAERI seminar on nuclear data; Tokai, Japan (30 Nov 1983).

The secondary neutron and photon spectra from thick carbon, iron, copper and lead targets bombarded by 30-MeV p, 33-MeV d, 65-MeV ^{3}He and 65-MeV α were measured. The intranuclear-cascade-evaporation Monte Carlo calculation of neutron emission was done with the MECC-7 and LHI codes. The measured secondary neutron spectra were analyzed phenomenologically.

40694 (JINR—D-7-83-644, pp 324-331) **Fusion oscillations for symmetric light heavy-ion systems.** Poffe, N. (Oxford Univ. (UK). Nuclear Physics Lab.); Rowley, N.; Lindsay, R. (SERA (Socialist Environment and Resources Association), London (UK). Energy Group). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of fusion oscillations for symmetric light heavy-ion systems is discussed. A recent experiment performed at Oxford shows that in the intermediate system (^{20}Ne+^{20}Ne) the oscillations are still present. The experimental data are considered in the framework of a simple penetration model. Experimental fusion cross section for ^{12}C+^{12}C is given. Excellent fit for the magnitude and phase of oscillations is obtained.

40695 (JINR—D-7-83-644, pp 279-287) **High-energy particle emission and search for the ^{10}He nuclei in heavy ion reactions.** Penionzhkevich, Yu.Eh. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of studying the emission of high-energy charged particled in heavy ion reactions is discussed. The sum of experimental data proves that this process is direct, and for its interpretation it is possbie to use the model of direct reactions. The problem of stability of the ^{10}He nuclide is investigated in detail. The upper boundary of ^{10}He nucleus production in the ^{232}Th+^{11}B reaction is obtained, it proved to be equal 5×10^{-7} mb/sr. In order to have an unambig us answer to the problem of stability of ^{10}He nuclei it is necessary to obtain them in the ground state. With this purpose charge-exchange reactions can be most effective.

40696 (KIYI—83-12, pp 14-19) **Measurement and analysis of the angular correlation in the reaction (p,2p) on ^{6}Li at the 47 and 70 MeV incident protons.** Vdovin, A.I.; Kadkin, E.P.; Loshakov, I.I.; Pasechnik, M.V.; Saltykov, L.S. 1983. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781033.

In Nuclear and physical researches on the isochronous cyclotron U-240 during 1982.

Experimental and theoretical results of studying ^{6}Li(p,2p)^{5}He reaction at 47 and 70 MeV incident isotopes are presented. Measurements are conducted in symmetric coplanar geometry. Experimental functions of 47 and 70 MeV proton angular correlation and theoretical functions of 47 MeV proton angular correlation are obtained. The calculation has been conducted in the supposition of both quasifree interaction using the method of t-matrix approximation with distorted waves and a two-stage process. Analysis of influence of parameters of proton wave function distortion on the type of angular correlation function is carried out. Comparison of experimental and theoretical results permitted to estimate the role of effects of descent from the energy surface and to calculate the value of ^{6}Li(p,2p)^{5}He reaction amplitude with account of different mechanisms of the reaction.

40697 (KIYI—83-12, pp 19-24) **^{6}Li(p,α)^{3}He reaction at 47,8-62,5 MeV energies.** Nemets, O.F.; Ostashko, V.V.; Povoroznik, O.M.; Urin, V.N.; Yasnogorodskij, A.M. (AN Ukrainskoj SSR, Kiev. Inst. Yadernykh Issledovanij); Barit, I.Ya.; Zuev, S.V. (AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1983. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781033.

In Nuclear and physical researches on the isochronous cyclotron U-240 during 1982.

Angular distributions of the ^{6}Li(p,α)^{3}He reaction in the THETAsub(c.n.) = 20-160 deg angular range are measured at 47.8-62.5 MeV proton energies on an extracted beam of the isochronous cyclotron U-240. The results obtained in the paper are analyzed together with data of other authors at lower energies by approximation of angular distributions by Legendre polynomials expansion. Deflection from smooth energy dependence of polynomial coefficents at energies corresponding to ^{7}Be nucleus excitation of about 50 MeV is observed.

40698 **Microscopic analysis of proton elastic scattering in the range 80-200 MeV.** Dietrich, F.S.; Petrovich, F. (Lawrence Livermore National Lab., CA). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 148(1983). (CONF-821050—). Contract W-7405-ENG-48.

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

A systematic comparison is made of differential cross-section and analyzing-power data on ^{12}C, ^{28}Si, ^{40}Ca, ^{90}Zr, and ^{208}Pb at 80-200 MeV with calculations based on the single-step folding-model approach to the optical potential. In these calculations, proton densities have been inferred from electron scattering results, with neutron densities either the same as for protons (^{12}C, ^{28}Si, ^{40}Ca) or with a small neutron skin consistent with 800-MeV proton scattering results (^{90}Zr, ^{208}Pb). The effective two-body interactions that have been used are the Love-Franey t-matrix, a density-dependent interaction based on the Paris potential (calculated by von Geramb), and finally the Brieva-Rook density-dependent central interaction used with the spin-orbit part of the Love-Franey interaction.

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

In this report, we present our preliminary results for the symmetric two-body fragmentation of composite systems produced in reactions of 280 MeV ^{32}S^{9+} ions bombarding ^{13}C and ^{24}Mg target nuclei.

40703 (CEA-N—2406, pp 122-125) **Fragment production in the ^{20}Ne+^{27}Al system at 30 MeV/A.** Morjean, M.; Charvet, J.L.; Uzureau, J.L. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Fragments produced in the 30 MeV/A ^{20}Ne + ^{27}Al reaction have been detected from 5° to 50° between 3 MeV/A and 35 MeV/A. At least three different origins can be attributed to these fragments.

40704 (CEA-N—2406, pp 134-136) **Anisotropy ratio for proton inclusive production at 400 MeV/N.** Zwermann, W. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The inclusive production of protons in intermediate energy nuclear collisions will be discussed within the framework of an independent multiple scattering approach, with particular emphasis on the anisotropy ratio, an observable which has received little attention so far. Using the almost analytical model of transport theory, the momentum distributions after each collision number by solving an equation of Fokker-Planck type with the distribution after the first collision as initial function. Results are presented.

40705 (IAEA-R—3114-F) **Quality assessment and consistency check of measured nuclear data up to 20 MeV including the range of resonances. Final report for the period 1 May 1982-30 April 1984.** Boedy, Z.T. (International Atomic Energy Agency, Vienna (Austria)). Sep 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781060.

This is the final report of a research contract with the IAEA. The object is the compilation and evaluation of all the data on (n,t) and (n,3He) reactions cross-sections, respectively. The main results of the research are given (some discrepancies in the experimental data; analytic formulas for an empirical description of the data, separately for the even and odd nuclei with $z > 20$; methods to extrapolate to energies where measurements are missing; mass regions where data are needed), and publications by the authors with the detailed results are quoted.

40706 (INIS-SU—282, pp 358) **Effect of population of the magnetic substates of the 2^+_1 level on alpha particle inelastic scattering.** Bulkin, V.S.; Gorpinich, O.K.; Tokarevskij, V.V. 1984. (In Russian). NTIS (US Sales Only), PC A99/MF A01. File Number DE85780893. (CONF-8404189—Summ.).

From 34. conference on nuclear spectroscopy and nuclear structure; Alma-Ata, USSR (17 Apr 1984).

40707 (JINR—D-7-83-644, pp 173-181) **Application of methods of coherent optics to nuclear physics.** Izosimov, I.N.; Naumov, Yu.V. (Leningradskij Gosudarstvennyj Univ. (USSR). Nauchno-Issledovatel'skij Fizicheskij Inst.). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Methods of polarization of nuclei with the aid of circular-polarized light with detection according to nuclear radiation, are discussed. The orientation process of Na nuclei in the case of optic pumping is considered. Coherent effects in the electron atom shell, Hanle effect and the crossing of levels in the optic radiation are investigated. Polarization degree of ^{22}Na fluorescence depending on the value of external magnetic field during irradiation by light of coherent polarization on the pulsed dye laser is studied. The method of obtaining coherent ensemble of atomic nuclei during irradiation of atoms by coherent polarization light is analyzed.

40708 (UCRL—53649) **Spin-flip (p,n) reactions on ^{26}Mg, ^{54}Fe, and ^{56}Fe at selected proton bombarding energies in the range of 17 to 25 MeV.** Aron, D.L. (Lawrence Livermore National Lab., CA (USA)). Jun 1985. Contract W-7405-ENG-48. 161p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE85015664.

New data are presented for the ^{26}Mg(p,n)^{26}Al reaction at E/sub p/ = 19.12 and 24.97 MeV, for the ^{54}Fe(p,n)^{54}Co reaction at E/sub p/ = 17.20, 18.60, and 24.60 MeV, and for the ^{56}Fe(p,n)^{56}Co reaction at E/sub p/ = 19.12 and 24.59 MeV. Data were taken with the LLNL Cyclograaff at 16 angles from 3.5° to 159.0°. A large detector at 23.8° with a long neutron flight path collected high resolution spectra. This large detector also collected separate 0° high resolution data on the ^{26}Mg and ^{56}Fe(p,n) reactions at E/sub p/ = 19 MeV. Absolute differential (p,n) cross sections were extracted for 1^+ states in ^{26}Al, ^{54}Co, and ^{56}Co, for the 0^+ isobaric analog state (IAS) in ^{54}Co and ^{56}Co, for a 2^+ state in each residual nucleus, and for the 0.199 MeV 7^+ state of ^{54}Co. No new experimental states were identified. Only relative cross sections were extracted at 0°. Experimental angle-integrated cross sections were obtained for all but one state. DWBA79 was used, with the G-matrix effective nucleon-nucleon interaction of Bertsch et al. (with the central triplet-odd component V/sub to/ = O) and the Livermore shell model wave functions to calculate differential (p,n) cross sections to 1^+ states and to the ^{54}Co and ^{56}Co IAS. Normalization of the DWBA angle-integrated cross sections to measurements for the ^{54}Co and ^{56}Co IAS (at E/sub p/ = 24.6 MeV) yielded the renormalized V/sub tau/ = 21.4 +- 2.1 MeV. Normalization of the DWBA angle-integrated cross sections to measurements for the 24.6 MeV ^{54}Co and ^{56}Co 1^+ states, coupled with the normalization of the wave functions to previously experimentally determined GT strength, yield the renormalized V/sub σtau/ = 12.3 +- 1.2 MeV. The experimental Gamow-Teller strength B(GT)/sub exp./ of the T = 1 ^{26}Al state at 9.44 MeV was found to be 0.69; B(GT)/sub exp/ of the T = 1 ^{26}Al state at 10.47 MeV was found to be 0.39.

40709 (CEA-N—2406, pp 69-73) **Effects of two-particle two-hole excitations on the mass distributions in the ^{16}O + ^{40}Ca reaction.** Yamaji, S.; Tohyama, M. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The mass distribution in the ^{16}O + ^{40}Ca collision at Esub(lab) = 157.3 MeV is calculated in the modified time-dependent Hartree-Fock theory which includes the effects of two-particle two-hole excitations. The obtained width of the mass distribution is the same order of magnitude as experimental data.

40710 (CEA-N—2406, pp 59-63) **Identification of an internal-wave contribution to inelastic scattering.** Dean, D.R.; Rowley, N. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

It is shown that the angular-momentum mismatch of an internal-wave contribution to inelastic scattering is greater than that of the barrier wave. The spin polarization of the residual nucleus will therefore be larger under conditions of moderate absorption. The system ^{40}Ca (α,α') ^{40}Ca (3^-, 3,73 MeV) at Esub(lab) = 49.5 MeV is discussed in detail, with particular emphasis on the observable consequences of this internal-wave contribution.

40711 (CEA-N—2406, pp 137-140) **Linearized Uehling-Uhlenbeck equation applied to high energy nuclear collisions.** Mies, S.; Schuermann, B. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

An expansion of the one-nucleon distribution function in terms of the number n of independent NN collisions is developed and thereby the Uehling-Uhlenbeck equation is recast in an infinite set of coupled integro-differential equations.

40712 (DOE/ER/05172—0019) **Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report.** Mignerey, A.C. (Maryland Univ., College Park (USA). Dept. of Chemistry). Jul 1981. Contract AS05-76ER05172. 56p. (ORO—5172-0019). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE85014729.

The research summarized in this report was performed during the period August 1, 1980 to June 30, 1981. The experimental emphasis in the heavy-ion-induced reaction studies continues to be discrete charge and mass resolution of all projectile-like fragments measured. In an experiment performed at the Argonne National Laboratory Superconducting LINAC, the ^{37}Cl beam was used to bombard targets of ^{40}Ca and ^{209}Bi. This experiment is compared to results of our previous ^{56}Fe-induced experiments. Attempts were made to extend the ^{56}Fe reactions to lower energies at the Lawrence Berkeley Laboratory SuperHILAC. In a desire to improve the mass and charge resolution of previous experiments we tried a time-of-flight telescope employing both a channel-plate start and stop signal. This was backed by an ion chamber ΔE and silicon E detector. The operational difficulties encountered are being corrected and we hope to have a reliable system ready this fall. Studies of target fragmentation in ^{4}He-induced reactions are continuing via experiments and model calculations. The program which began at the University of Maryland Cyclotron has been continued at the Indiana University Cyclotron with 120 and 200 MeV ^{4}He incident on ^{13}C and ^{27}Al targets. While the Indiana data are currently being analyzed and no results are yet available, a summary of the Maryland work is given. Also presented in this section are the model calculations used to describe the data. 28 refs.

Thesis. Submitted to Vanderbilt Univ., Nashville, TN.

Angular distributions of the ^{40}Ca(^{11}B,^{12}C)^{39}K, ^{40}Ca(^{10}B,^{11}C)^{39}K, and ^{40}Ca(^{14}C,^{15}N)^{39}K single proton pickup reactions have been measured at beam energies of 32, 31, and 40 MeV, respectively. The (^{11}B, ^{12}C) reaction has also been measured at 68 MeV. Angular distributions have been measured for transitions to the ^{39}K ground state have also been measured for all but the 32 MeV (^{11}B,^{12}C) reaction. Elastic scattering data has been taken at each of these energies for use in determination of optical model potential parameters. These optical model potentials have then been used to calculate the transfer reaction angular distributions using the Distorted Wave Born Approximation (DWBA). The success of the DWBA in describing each of these reactions as well as the anomalous ^{40}Ca(^{13}C,^{14}N)^{39}K reaction is discussed. The design and construction of a new "hybrid" detector is also discussed. This detector allows measurement of the total energy, energy loss, point of intersection with the focal plane, and the angle of incidence over a large portion of the focal plane. All of these parameters are measured in a single detector volume with no additional windows to degrade resolution. 52 refs., 43 figs.

40717 (LA—10368-T) **Spin excitations in ^{48}Ca and ^{90}Zr with 319 MeV protons.** Nanda, S.K. (Los Alamos National Lab., NM (USA)). May 1985. Contract W-7405-ENG-36. 216p. NTIS, PC A10/MF A01; 1; GPO Dep. File Number DE85015364.

Cross sections, analyzing powers, and spin-flip probabilities have been measured in the low momentum transfer region in the ^{90}Zr(p vector, p' vector) ^{90}Zr* reaction at 319 MeV. A rich fine structure is observed for the first time in inelastic proton scattering in the previously proposed M1 giant resonance region. Angular distribution of most of these states are consistent with M1 excitation. The excitation energies of the fine structure states are in good agreement with similar structure seen in electron scattering; however, discrepancies in spin assignments remain. The measured cross section for the entire bump is about 37 +- 10% of the Distorted Wave Impulse Approximation (DWIA) prediction for the M1 strength in ^{90}Zr with simple wave functions. However, an analysis of the fine structure states reveals about 15% of the strength in the M1 region to be due to narrow El states; another 8% is attributed to M2 strength. The spin-flip measurements for ^{90}Zr reveal a large spin-flip probability value for the M1 region; good agreement is obtained with DWIA calculations. However, a large cross section for spin excitations distributed uniformly over the excitation energy region from about 7 to 25 MeV is observed for the first time. The spin excitation strength in this giant resonance continuum is found to about 0.80 mb/sr/MeV. Angular distributions for the spin-flip cross sections from 7 to 18 MeV in steps of 2 MeV have been analyzed with low multipole spin excitation calculations in the DWIA framework; the observed spin-flip strength in this region is found to be consistent with spin excitation involving angular momentum transfer of up to two. Finally, cross section, analyzing power, and spin-flip probability data have also been obtained for the 10.23 MeV M1 transition in the ^{48}Ca(p vector, p' vector)^{48}Ca* reaction at 319 MeV. The quenching of M1 strength in ^{48}Ca relative to theoretical predictions is found to be consistent with previous work.

40723 (ANL/NDM—91) **Energy dependence of the optical model of neutron scattering from niobium.** Smith, A.B.; Guenther, P.T.; Lawson, R.D. (Argonne National Lab., IL (USA)). May 1985. Contract W-31-109-ENG-38. 28p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015234.

Neutron differential-elastic-scattering cross sections of niobium were measured from 1.5 to 10.0 MeV at intervals of $\leqq$200 keV below 4.0 MeV, and of $\approx$500 keV from 4.0 to 10.0 MeV. Ten to more than fifty differential-cross-section values were determined at each incident energy, distributed over the angular range $\approx$20 to 160°. The observed values were interpreted in the context of the spherical optical-statistical model. It was found that the volume integral of the real potential decreased with energy whereas the integral of the imaginary part increased. The energy dependence in both cases was consistent with a linear variation. There is a dispersion relationship between the real and imaginary potentials, and when this was used, in conjunction with the experimental imaginary potential, it was possible to predict the observed energy dependence of the real potential to a good degree of accuracy, thus supporting the consistency of the data and its analysis. The real-potential well depths needed to give the correct binding energies of the 2d/sub 5/2/, 3s/sub 1/2/, 2d/sub 3/2/ and 1g/sub 7/2/ particle states and of the 1g/sub 9/2/ hole state are in reasonable agreement with those given by a linear extrapolation of the scattering potential. However, the well depths needed to give the observed binding of the 2p/sub 3/2/, 1f/sub 5/2/ and 2p/sub 1/2/ hole states are about 10% less than the extrapolated values. 40 refs., 5 figs.

40724 (BNL-NCS—36554) **Heavy mass elements total half-lives for selected long-lived nuclides.** Holden, N.E. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 12p. (CONF-8506130—5). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014218.

From International Committee for Radionuclide Metrology meeting; Grenoble, France (3 Jun 1985).

In the past, many compilations and evaluations of half-lives have been made which have uncritically accepted authors' values and uncertainties. They have merely recommended weight-averaged reported results. This evaluation attempts to reanalyze each experiment in the literature including an estimate of the standard deviation utilizing, where possible, an estimate of the systematic error. This paper constitutes a preliminary step in the process of recommending values. The long-lived nuclides of heavy mass elements are of interest in determining geological ages using the Re-Os or the Lu-Hf dating methods, in supplying information on the p-process (proton capture) of nucleo-synthesis, in providing information on lepton number conservation and the rest mass for the electron neutrino from double β decay processes and in the case of tantalum because it represents the first long-lived state which is actually an isomer. Experimental data on the half-lives of selected nuclides have been evaluated and recommended values and uncertainties are presented for the following nuclides: ^{128}Te, ^{130}Te, ^{129}I, ^{138}La, /sup 144,145/Nd, /sup 146,147,148/Sm, ^{152}Gd, ^{154}Dy, ^{176}Lu, ^{174}Hf, ^{180}Ta, ^{187}Re, ^{186}Os, ^{190}Pt, /sup 204,205/Pb and /sup 230,232/Th. It is shown that ^{204}Pb, which was previously thought to be radioactive, is stable. For ^{205}Pb, the L electron capture x-rays have been revised for the M and higher x-ray yields. The resulting half-life for ^{205}Pb is 1.9 +- 0.3 x 10^7 years. ^{146}Sm with a half-life of 1.03 +- 0.05 x 10^8 years is the longest-lived extinct natural nuclide. 21 tabs.

40725 (CEA-N—2406, pp 49-53) **Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model.** Froebrich, P. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

In this contribution is presented some further results of the extended surface friction model in order to demonstrate that this model is able to describe in a universal way data on fusion and deep-inelastic collisions of heavy ions. The model is an extension of the friction model by Gross and coworkers by including individual (quadrupole) deformation modes of the collision partners, by taking into account charge and mass transfer, and by treating statistical fluctuations in all relevant degrees of freedom. One essential feature of the model is that the friction acts between the juxtaposed surfaces of the collision partners. Measured cross sections are compared with the results of the surface friction model.

40726 (CEA-N—2406, pp 106-110) **Exclusive measurements in incomplete fusion reactions of Sn with ^{16}O at 5.6, 6.2 and 7.8 MeV/A.** Gerschel, C.; Gillibert, A.; Perrin, N.; Tricoire, H. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Exclusive γ multiplicity measurements have been performed on ^{116}Sn and ^{124}Sn targets with ^{16}O beam at 90, 100 and 125 MeV. The entrance channel angular momentum has been determined. The whole incomplete fusion channel is found to follow the complete fusion channel with an increasing relative cross section as the beam energy increases.

40727 (CEA-N—2406, pp 101-105) **Competition between peripheral and central emission in incomplete fusion reactions.** Tricoire, H. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

In the frame of a classical model we show that the emission of fast particles in incomplete fusion reactions may occur either from a PEP emission which happens preferentially at low angular momenta or from an inertial emission with a maximum of the cross section located near the critical angular momentum for complete fusion. The competition of these mechanisms depends crucialy of the interaction between the particle to be emitted and the target nucleus. Numerical calculations are performed with various particle target potentials. Using a proximity potential, one gets results in good agreement with experimental data.

40728 (CRN-PN—84-28) **Behaviour of ^{144}Gd at very high angular momentum. Study of the continuum.** Nourreddine, A. (Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1 Univ., 67 (France)). 1984. 137p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE85751939.

The specific physical concepts that dictated the choice of ^{144}Gd for the present high spin study are presented in the first part of this work. The second part describes the various formalisms and techniques used to extract the multiplicities, multipolarities and moments of inertia from continuous γ ray spectra. The third part relates the results of the quasi-continuum γ ray of ^{144}Gd formed in the fusion-evaporation reaction $^{120}Sn(^{28}Si, 4n\gamma)$ with four bombarding energies. A detailed balance of energy and angular momentum of the compound nucleus desexcitation has been given. Finally the evolution of the nuclear shape as a function of spin has been determined from the experimental data and interpreted by a combined micro and macroscopic theoretical calculations using a Woods-Saxon potential.

40729 (DOE/ER/10495—5) **Study of transitional nuclei at TRISTAN. Progress report.** Petry, R.F. (Oklahoma Univ., Norman (USA)). 1985. Contract AS05-79ER10495. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85012463.

The past year has been devoted to continued studies of the A ~ 100 region with new studies on the decay of ^{100}Sr and ^{103}Sr to examine the structure of odd-odd deformed nuclei in this region, and continuing studies of the odd-A nuclei in this region, particularly ^{101}Sr. In addition work on the decay of ^{145}Cs has been revived with the availability of an appropriate ion source. A significant effort was expended on the decay of ^{90}Sr.

40730 (GSI—85-13-Prepr.) **Gamma-spectroscopic investigations in the radiative-fusion reaction $^{90}Zr + ^{90}Zr$.** Schmidt, K.H.; Simon, R.S.; Keller, J.G.; Hessberger, F.P.; Muenzenberg, G.; Clerc, H.G.; Sahm, C.C.; Gollerthan, U.; Schwab, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 11p. (CONF-850173—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE85752011.

From 23. international winter meeting on nuclear physics; Bormio, Italy (21 Jan 1985).

In order to understand the nature of the radiative-fusion process, the emitted γ radiation was investigated in a recent experiment.

40731 (GSI—85-14-Prepr.) **Structure effects in ^{238}U-induced dissipative collisions.** Mayer, W.; Beier, G.; Friese, J.; Henning, W.; Kienle, P.; Koerner, H.J.; Mayer, W.A.; Mueller, L.; Rosner, G.; Wagner, W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Feb 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85752012.

A high resolution kinematic coincidence set-up using position sensitive gas detectors was developed to study ^{238}U - induced reactions on ^{110}Pd and ^{124}Sn targets between 5.70 and 6.02 MeV/u bombarding energies. Nuclear structure effects were observed in the distribution of binary reaction products possibly caused by enhanced multinucleon transfer matrix elements.

Russian original distributed as INDC(CCP)-213/G.

In Translation of selected papers published in Nuclear Constants 1(50) 1983.

Experimental differential and integral cross-sections of elastic and inelastic scattering of neutrons by the isotopes ^{92}Mo and ^{94}Mo are given. The experimental data are analysed in the framework of the spherical optical model, of the coupled-channel method and also of up-to-date versions of the statistical theory of nuclear reactions. A theoretical analysis is used to determine the ratio of the contributions of the two scattering mechanisms, namely direct scattering and scattering through a compound nucleus.

Russian original distributed as INDC(CCP)-213/G.

In Translation of selected papers published in Nuclear Constants 1(50) 1983.

Odd isotopes of samarium are among the first ten or so most important fission products responsible for reactor core poisoning. The odd isotopes of europium have a great potential as a material for reactor control rods. There is, however, a considerable spread of the data of neutron capture cross-sections for these two elements, and this prompted the present analysis and evaluation of this kind of data. A summary of existing experimental data is presented, and tables with evaluated parameters necessary to describe and extrapolate these data are given.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Preliminary investigation of the possibility of producing new isotopes, far from stability line, with heavy ion beams in the range of 20 to 100 MeV/nucleon is carried out. Isotopic distributions of Rb, Cs produced in the $^{12}C+^{181}Ta$ system and Rb produced in the $^{12}C+^{93}Nb$, $^{16}O+^{93}Nb$ and $^{12}C+^{238}U$ systems are given. It is concluded that different processes occurring in the collisions are observed: peripheral collisions with weak mass and energy transfers and central collisions leading to fission and fragmentation of the target or projectile nuclei.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Deep inelastic collisions of heavy ions and positron production at bombarding energies close to the Coulomb barrier are discussed. $^{238}U+^{110}Pd$ and $^{238}U+^{124}Sn$ collisions at energies 5.7; 5.85 and 6.00 MeV which ranges between 4% and 11% above the Coulomb barrier are investigated. For the first time enhanced yields of pairs of product nuclei, indicating strong shell effects on the reaction mechanism in the whole bombarding energy range, are detected. A narrow positron line with an energy of about 300 keV is indicated.

From Conference on nuclear structure with heavy ions; Legnaro, Padua, Italy (27 May 1985).

To investigate the mechanism of asymmetric nucleus-nucleus reactions from the Coulomb barrier to intermediate energies the $^{14}N + {}^{169}Tb$ reaction was studied at five bombarding energies between 8 and 23 MeV/u via particle-particle correlations (at selected energies) and particle KX-ray coincidences to identify the specific reaction channels. With the KX-ray method partial cross sections for projectile-like fragments (PLF) as a function of the atomic number (Z/sub res/) of the residual nucleus can be determined. The charge balance yields the "missing charge" dZ = Z/sub proj/ + Z/sub targ/ - Z/sub PLF/ - Z/sub TLF/ that indicates whether, in addition to the PLF, other charged particles are emitted. A large fraction of the inclusive cross sections is found to originate from such channels with two or more fragments in the exit channel, and this fraction increases as the PLF is further removed in mass from the incident projectile, and with increasing bombarding energy. From the particle-particle correlation studies it is found that sequential decays of PLF's are dominant. "Non-sequential" processes, if present, are associated with inelastic reactions involving excitations of both projectile and target. The bulk of the large alpha-particle cross section at small angles is found to be associated with channels in which, in addition to the alpha particle, only nucleons and other alpha particles are emitted. From γ-ray multiplicity measurements and from the broad distribution of the strength with Z/sub res/ it is concluded that these alpha particles originate from inelastic (damped) processes. 27 refs., 10 figs.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Direct processes in heavy ion reactions are investigated. Relative theoretical contributions in the inclusive spectrum of α particles on processes of stripping breakup and inelastic breakup are estimated using the $^{22}Ne + {}^{181}Ta$ reaction as an example. The consideration is performed taking into account Coulomb and nuclear distortions in the inlet and outlet ion channels. It is shown that the hard edge of α spectrum and its maximum are well described by peripheral direct processes. The hard spectrum edge is conditioned by the pure process of "incomplete fussion" bringing about the pro-

duction of a compound nucleus. The main part of inclusive spectrum is conditioned by reactions of inelastic and elastic breakup not connected with the production of a compound nucleus.

40763 (JINR—D-7-83-644, pp 381-388) **Heavy-ion induced fission reactions.** Britt, H.C.; Fowler, M.M.; Fraenkel, Z.; Gavron, A.; Plicht, J.; Wilhelmy, J.B. (Los Alamos National Lab., NM (USA)); Plasil, F.; Awes, T.; Young, G. (Oak Ridge National Lab., TN (USA)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Heavy-ion induced fission reactions are investigated. The problem of obtaining a representative set of fission-cross section data, so that it would be possible to test both the mass and angular momentum dependence of fission barriers in the mass region $150<A<210$, is discussed. A statistical model utilizing the barrier calculations of Sterk has been developed. Results on fission cross sections for Po, Os and Er isotopes produced and excited in a variety of heavy-ion reactions induced by projectiles from ^{9}Be through ^{64}Ni. The experimental data clearly show the qualitative effects of angular momentum, excitation energy and fissility on the fission cross section. They provide an ideal testing ground for theoretical models of fission in this mass region.

40764 (JINR—D-7-83-644, pp 102-113) **Masses of nuclides near the boundary of proton stability.** Novikov, Yu.N. (AN SSSR, Leningrad. Inst. Yadernoj Fiziki). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Results of precision measurements of boundary energies of continuous positron spectra using a detector made of superpure germanium are presented. On the basis of these results and values of alpha-particle energies in alpha-decay chains, values of masses of "remote" nuclides are obtained in the range of mass numbers A--150-180. The boundary of proton stability of nuclides is experimentally identified for the first time, ^{175}Au, ^{176}Au, ^{177}Au, ^{169}Ir, ^{170}Ir, ^{171}Ir, ^{165}Re, ^{166}Re and, possibly, ^{161}Ta nuclei appear to be sources of proton radioactivity. It is shown that pair proton energy Δp rises in the course of approaching the boundary of proton stability, and its value for nuclides close to the boundary surpasses Δsub(p) value in the range of beta-stable pairs in a number of cases by 50%. Regularity in the change of Δsub(p) values in all cases investigated is noted.

40765 (CEA-N—2406, pp 8-13) **Nearside-farside analyses of heavy-ion direct reactions to the continuum.** Dean, D.R.; Mosel, U.; Lenske, H.; Wolter, H.H. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Continuum multi-step direct-reaction theory is combined with a decomposition of the scattering amplitude into its nearside and farside components. Calculations are made for ^{16}O+^{48}Ti at Esub(lab) = 75 - 125 MeV and ^{16}O+^{208}Pb at Esub(lab) = 192 MeV. One- and two-step processes are considered, which enables a description of continuum cross sections and spin polarizations to be given for energy losses of up to 25 MeV. The increased importance of negative-angle scattering for large energy losses in some systems can be explained using these techniques. The effect of the strong Coulomb repulsion in heavy systems is considered. The method is quantum-mechanically based and the results justify the classical interpretation of Wilczynski plots.

40766 (CEA-N—2406, pp 36-39) **Fast light ejectiles as a probe of reaction mechanism. The important effect of decomposition into different sources.** Ingold, G.; Jahnke, U.; Thoma, G.; Homeyer, H.; Fuchs, H.; Buergel, M.; Hilscher, D. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Fast forward-emitted light particles, frequently considered as carrier of information on early reaction phases, are to a considerable fraction due to the trivial process of sequential emission from excited projectile-like fragments. A method is pointed out for an experimental separation of the sequential decay from the more interesting true preequilibrium emission. The method is based on a determination of the energy transferred to the target by counting of the evaporated neutrons. The application to the case of α-particles from ^{20}Ne+^{197}Au at 11, 15 and 20 MeV/nucleon indicates very similar yields, excitation functions and angular distributions for the two processes. The α-particle energy distributions, however, are very different for the two mechanisms and imply source parameters deviating significantly from those obtainable with fits to inclusive cross sections.

40767 (CEA-N—2406, pp 45-48) **Phase space model of angular distributions in heavy-ion-induced fission.** Rossner, H.H.; Huizenga, J.R.; Schroeder, W.U. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Heavy-ion induced fission reactions are analyzed in terms of a statistical scission model, in which fragment angular distributions are determined by the phase space available at the scission point. Excellent agreement between calculations and data is obtained, including reactions exceeding the liquid-drop limit of stability, in which cases the conventional transition-state model is inapplicable.

40768 (CEA-N—2406, pp 97-100) **Investigation of the Kr+Au system at 35 MeV/u: evidence for highly energy relaxed products.** Adloff, J.C.; Boishu, B.; Dalili, D. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

We present the first experimental results obtained by the Caen-Saclay-Strasbourg collaboration using the first 35 MeV/u Kr beam accelerated at GANIL. They show the existence, in addition to known mechanism like fragmentation, of highly energy relaxed products.

40769 (FRNC-TH—1920) **Measurement of photonuclear cross sections from 30 to 140 MeV for intermediate and heavy mass nuclei (Sn, Ce, Ta, Pb and U).** Lepretre, A. (Paris-11 Univ., 91 - Orsay (France)). Jun 1982. 309p. (In French). NTIS (US Sales Only), PC A14/MF A01. File Number DE85751937.

The total photonuclear absorption cross section for Sn, Ce, Ta, Pb and U has been studied from 25 to 140 MeV using a continuously variable monochromatic photon beam obtained from the annihilation in flight of monoenergetic positrons. The basic experimental results are a set of data giving sums of inclusive multiple photoneutron production cross sections of the form σsup(j) (Esub(γ) = Σsub(i=j)σ(γ,in) for neutron multiplicities ranging from j=1 to 12. From these data the total photonuclear absorption cross section σ(tot : Esub(γ)) has been deduced. It is concluded that Levinger's modified quasi-deuteron model describes the total cross sections reasonably well. When these data are combined with lower energy data and integrated to 140 MeV they indicate the need for an enhancement factor K for the Thomas-Reiche-Kuhn sum rule of 0.76 +- 0.10. No evidence was found that would indicate an A-dependence for the enhancement factor. From event-by-event records of observed photoneutron multiplicities it was also possible to determine the mean number of photoneutrons, antiν, for each photon energy and the widths W of the multiplicities distributions. From these measurements one also obtains the cross section

for the formation of a compound nucleus state excited with the full energy of the absorbed photon.

40770 **(IAE—3786/2) Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei.** Platonov, A.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 27p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701810.

A general scheme for calculating contributions from low-lying collective excitations to one-particle matrix elements was constructed in the framework of self-consistent theory of the finite Fermi systems. The calculations were conducted as applied to isomer shifts as well as to probabilities of l-forbidden M1-transitions in the ^{209}Pb+- one quasiparticle nuclei: sup(207, 209)Pb, ^{209}Bi and ^{207}Tl. 23 references, 4 tables.

Inst. Yadernoj Fiziki). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Investigations into mass and energy distributions of fission fragments of preactinide nuclei from ^{182}W to ^{209}Bi in the (α, f), (^{3}H, f), (^{12}C, f) and (^{16}O, f) reactions are presented. Results of studying mass distributions of fission fragments of nuclei are given. The dependence of width of mass distribution of fragments on excitation energy and nucleon composition of nuclei is presented. The effect of angular momentum on average parameters of mass and energy distributions of fragments is considered. The important role of the saddle point in the mechanism of formation of mass distribution of fission fragments of preactinide nuclei in a wide range of excitation energies and angular momenta, is noted. Asymmetric fission of preactinide nuclei is discussed.

40773 (JINR—D-7-83-644, pp 263-278) **Dynamical limitations to heavy ion fusion.** Back, B.B. (Argonne National Lab., Evanston, IL (USA)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Dynamical limitations to heavy ion fusion reactions are considered. The experimental signatures and the importance of a quasi-fission process are examined. The angular distributions of fission fragments for the ^{32}S+^{208}Pb and ^{16}O+^{238}U systems are presented. It is shown that the observations of quasi-fission for even rather "light" heavy ions possess severe limitations on the fusion process. This result may consequently be responsible for the lack of success of the search for super heavy elements in heavy ion fusion reactions.

40774 **Nuclear data sheets for A = 205.** Schmorak, M.R. (Oak Ridge National Laboratory, Oak Ridge, Tennessee, 37831). *Nuclear Data Sheets;* **45**: No. 1, 145-249(May 1985). Contract AC05-84OR21400.

The available experimental data pertaining to the nuclear structure of nuclei with A = 205 are compiled; the results from various decay and reaction measurements are compared and evaluated. Inconsistencies and discrepancies in the level schemes are discussed. The values of the r_0 parameter, used to calculate α HF, were obtained as in 72E121.

40776 (CEA-N—2406, pp 40-44) **Emission of light and energetic medium masses in multiparticle exit channels in the reactions ^{238}U+sup(nat)U and ^{238}U+Au at 16.7 MeV/N energy.** Khan, E.U.; Vater, P.; Brandt, R.; Khan, H.A.; Jamil, K.; Khan, N.A.; Sial, M.A. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Employing the 2π-geometry technique, two Solid State Nuclear Track Detectors (SSNTD) of different registration threshold have been used for studying the interaction of 16.7 MeV/N ^{238}U with sup(nat)U and Au targets. The abundant production of five-pronged fission events, together with other experimental results show the emission of considerable amount of light (4 < = m < = 30)u masses. Carrying almost the same specific energy as the projectiles, medium masses (52 < = m < = 84)u are also emitted making angles of about 15° with respect to the beam direction.

40777 (CEA-N—2406, pp 111-115) **Investigation of linear momentum transfer on the Ar + U system at 44 MeV/u.** Charvet, J.L.; Chiodelli, S.; Gregoire, C. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

We have measured the correlation angles between two fission fragments emitted in the reaction Ar + U at 44 MeV/u. The results indicate that, in the most cases, little linear momentum has been transferred to the fissioning nucleus. This is different from what has been observed with lighter projectiles in the same bombarding energy range. We also present inclusive measurements of charged particles detected at forward angles.

From International conference on nuclear data for basic and applied science; Santa Fe, NM, USA (13 May 1985).

Nuclear decay data have broad relevance to a number of basic scientific disciplines as well as to many areas of technology. In this paper we discuss selected applications where decay data are making, or promise to make, important contributions. The following specific illustrations are discussed: the large body of precise new actinide-nuclide decay data produced through the work of the recently concluded IAEA Coordinated Research Program on the Measurement and Evaluation of Transactinium Isotope Nuclear Decay Data; the use of actinide-nuclide half-lives as reference standards in nuclear-data measurements; and the relevance of short-lived fission-product decay data to basic physics and reactor technology and some of the problems and challenges that they present to both theory and experiment.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of searching for superheavy elements (SHE) in nature is discussed. The data are presented on some most perspective methods which are applied or developed with this purpose. The greatest relative sensitivity of SHE detection is achieved due to neutron detectors. Using a neutron detector, the direct correlation between uranium content in Earth samples typical for mountain rocks of the Earth crust and the counting rate of events of spontaneous fission is established. For all samples studied the limit of SHE content is found $<1\text{-}3\times10^{-13}$ g/g. Using neutron detectors fixed in salt mine at the depth of 1100 m of water equivalent, samples of Saratov, Allende and Efremovka meteorites are also investigated. The upper limit of SHE content in samples, weighting about 10 kg at the counting rate of 10-15 neutron events a year, is 10^{-15} g/g in the supposition, that half-life period of SHE searched for is 10^9 years. The possibility of using a neutron detector in experiments on searching the decay of nucleon bound in the atomic nucleus is discussed in detail.

40784 (JINR—D-7-83-644, pp 405-419) **Fission barrier structure of nuclei in a region of thorium.** Pashkevich, V.V. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Fusion barrier structure of nuclei in the region of thorium is investigated. Calculations are performed in the framework of the Strutinsky method. Dependences of single-particle levels in the minimum of nucleus deformation energy for quadrupole and hexadecapole deformations on octupole deformation are presented. A good agreement of theory and experiment in greatly deformed isotopes is found. It is shown that the Strutinsky method has permitted to predict the presence of intermediate minimum on the surface of nucleus deformation energy in light isotopes in the rhodium-thorium region.

40785 (JINR—D-7-83-644, pp 431-440) **Rapid disappearance of shell effects in the fission of transfermium nuclei.** Hulet, E.K. (Lawrence Berkeley Lab., CA (USA)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The fission of transfermium nuclei is investigated. Spontaneous fission (SF) of ^{259}Md and ^{260}[104] is discussed. Mass distributions from SF and total-kinetic-energy distributions for SF of ^{259}Md and ^{260}[104] are given. The obtained symmetric mass distributions for ^{260}[104] and ^{259}Md are not in accord with the predictions from an adiabatic approach to fission as calculated from the two-center shell model. The SF properties of ^{260}[104] and ^{259}Md agree well with those expected from passage through a single liquid-drop barrier.

40786 (JINR—D-7-83-644, pp 441-448) **Dissipative phenomena and kinetic energy, mass and charge equilibration in fission.** Pomorski, K. (Uniwersytet Marii Curie-Sklodowskiej, Lublin (Poland). Inst. Fizyki). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Some problems related to the description of the fission of a nucleus are discussed. Calculations are carried out for the ^{236}U nucleus. The relative distance between centers of fission fragments, the mass of the heavy fission fragment and its nentron excess are used as collective variables. The mass, energy and charge variances are calculated as functions of collective variables. It is shown that for the investigation of fission improvements in the solution techniques of the Fokker-Planck equation are necessary.

40787 (JINR—D-7-83-644, pp 9-20) **Respectives of heavy ion physics in JINR.** Flerov, G.N. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Perspectives of heavy ion physics in JINR are discussed. The main attention is paid to directions that are connected with the application of intensive beams of U-400 cyclotron. Experiments into studying stability limits of heavy atomic nuclei are considered. The possibility of using beams of heavy ions in applied fields, particularly for the production of very thin nuclear filters is noted. Prospects of synthesis of superheavy elements (SHE) and SHE search in nature are also considered. The data on the events of spontaneous fission found in meteorite and hydrotherms and the data on lengths of tracks in olivines from meteorite prove the possibility of obtaining evidences of SHE existence in nature.

40788 (JINR—D-7-83-644, pp 21-40) **Recent findings on the road to the limits of fusion.** Armbruster, P. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of existence of the limits of fusion is considered. The reasons preventing the production of a certain nucleus is classified in three categories: the ground state stability, the entrance channel restrictions and the exit channel restrictions. The discovery of the element 109 and the search for the element 116 are discussed in detail.

40789 (JINR—D-7-83-644, pp 41-54) **Recent attempts to produce superheavy elements by the $^{48}Ca+^{248}Cm$ reaction.** Gaggeler, H.; Bruchle, W.; Brugger, M. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem on the production of superheavy elements in the $^{48}Ca+^{248}Cm$ reaction is considered. Limitations for cold fusion are discussed. The cross section limits for the production of spontaneously-fissioning, long-lived superheavy elements 108 through 116 as it results from experiments are given. It draws attention to the high pUrity of the superheavy element chemistry in the experiment with any actinides.

40790 (JINR—D-7-83-644, pp 518-525) **Synthesis of heavy and superheavy elements via inertial confinement of uranium matter.** PetrascU, M. (Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

An outline of the mechanism for nuclear synthesis in confined uranium matter is presented. Conditions to perform fission chain reactions in milligrams ^{235}U are shown. Technical possibilities to reach conditions for inertial confinement of uranium, by using concentric proton beams, incident on a multilayer uranium pellet, were analyzed. The principle of acceleration of macroparticles of uranium with mass approximately 1g to velocities close to 10^6 cm/s is illustrated. The princiiple of acceleration is the following: the large current from a homopolar generator produces a magnetic field between the rails, and the magnetic field is interacting with the current flowing in the armature which in this case is an arc. The resulting Lorentz force accelerates the arc together with the projectile along the rails. The impact of two uranium projectiles is considered.

40791 (JINR—D-7-83-644, pp 589-595) **Measurement of alpha decay rare events in experiments on synthesis of far transfermium elements.** Kharitonov, Yu.P.; Rykhlyuk, A.V.; Konstantinesku, O.; Korotkin, Yu.S.; Ehsteves, Kh.; Oganesyan, Yu.Ts. (Joint Inst. for Nuclear Research, Dubna (USSR)); Yussonua, M. (CEA, 75 - Paris (France)); Brukhertzajfer, Kh. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The possibility of radiochemical technique for the measurement of alpha decay of rare events in experiments synthesis of far transfermium elements is studied. The radiochemical method is applied to separate a long-lived α-active isotope. In the case of α decay of $^{266}109$, $^{262}107$, $^{258}105$ isotopes long-lived ^{246}Cf is produced. α-spectra of Cof fractions separated from ^{209}Bi and ^{208}Pb irradiation products are presented. A peak with the energy of 6.75 MeV detected in spectra. The data of experiments are used to determine the half-life period which coincides with ^{246}Cf period, i.e. 36 hours. Decays with the energy of 6.75 MeV in the $^{209}Bi+^{58}Fe$ reaction with the integral flux on 3 x 10^8 particles for the first 70 hours of measuring californium fraction have not been observed.

40792 (KIYI—83-12, pp 6-11) **Study on probability of the actinide nuclei fission by 40-80 MeV α-particles.** Zaika, N.I.; Kibkalo, Yu.V.; Tokarev, V.P.; Shityuk, V.A. 1983. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781033.

In Nuclear and physical researches on the isochronous cyclotron U-240 during 1982.

Differential and integral cross sections of uranium-235 and uranium-236 nuclei fission by 40-80 MeV α-particles at the step approximately 10 MeV are measured and analyzed. Energy dependence of the value of distribution dispersion of fissile nucleus transient states by projections of total angular momentum K_0^2 is obtained from experimental data on angular anisotropy of fission. These data are compared with model calculations.

40793 (AD-A—152763/9/XAB) **Numerical study of the mean-trajectory approximation in a nonadiabatic process. Annual technical report.** Sawada, S.; Metiu, H. (California Univ., Santa Barbara (USA). Dept. of Chemistry). Mar 1985. 63p. (TR—18). NTIS, PC A04/MF A01.

Numerical results obtained with the mean trajectory approximation applied to a nonadiabatic process described by a curve-crossing model are presented. These results are compared to the results given by the customary trajectory approximation, which uses one adiabatic potential to generate the nuclear motion, and to the results given by Nikitin's formula. It was found that at low kinetic energy the three procedures give very different results. The differences are caused by the fact that the mean-trajectory method includes a quantum effect in the effective potential used for the classical motion. Also discovered was an unexpected behavior: under certain conditions the transition probability seems to become a random function of the incident energy.

40794 (AERE-R—11515) **CADE - A computer programme for the calculation of nuclear cross-sections from the Weisskopf-Ewing theory.** Wilmore, D. (UKAEA Atomic Energy Research Establishment, Harwell. Theoretical Physics Div.). Dec 1984. 22p. HMSO, London, price Pound 4.00.

A computer programme which performs compound nucleus calculations using the Weisskopf-Ewing formalism is described. The programme will calculate the cross-sections for multi-particle emission by treating the process as a series of stages in the cascade. The relevant compound nucleus absorption cross-sections for particle channels are calculated with built-in optical model routines, and gamma ray emission is described by the giant dipole resonance formalism. Several choices for the final nucleus level density formula may be made using the level density routine contained in the programme. The total cross-section for the emission of a particle at any particular stage, is calculated together with the cross-section as a function of energy. The probability of leaving the final nucleus in a state of any particular energy is also obtained.

40795 (BNL—36620) **Can antibaryons signal the formation of a quark-gluon plasma.** Heinz, U.; Subramanian, P.R.; Greiner, W. (Brookhaven National Lab., Upton, NY (USA); Frankfurt Univ. (Germany, F.R.). Inst. fuer Theoretische Physik). 1985. Contract AC02-76CH00016. 13p. (CONF-8504152—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85012262.

From Workshop on experiments for RHIC; Upton, NY, USA (15 Apr 1985).

We report on recent work which indicates that an enhancement of antibaryons produced in the hadronization phase transition can signal the existence of a transient quark-gluon plasma phase formed in a heavy-ion collision. The basis of the enhancement mechanism is the realization that antiquark densities are typically a factor 3 higher in the quark-gluon plasma phase than in hadronic matter at the same temperature and baryon density. The signal is improved by studying larger clusters of antimatter, i.e., light antinuclei like anti α, in the central rapidity region. The effects of the transition dynamics and of the first order nature of the phase transition on the hadronization process are discussed.

40796 (BNL—36655) **K meson-nucleus interactions: strangeness and nuclear matter.** Kahana, S. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 16p. (CONF-850634—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014229.

From International school for intermediate energy nuclear physics; Veronna, Italy (20 Jun 1985).

A brief review is provided of some straightforward K-nuclear and Λ-hypernuclear systems. A discussion of less straightforward speculations on H-dibaryons and strange quark matter by many authors, is also given. 28 refs., 6 figs.

40797 (CEA-N—2406, pp 13-17) **Transfer and excitations in grazing heavy ion reactions.** Werner, K.; Dietrich, K. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Expanding the determinant state of the TDHF theory in terms of basis functions involving the single particle states of separate nuclei and introducing certain statistical assumptions we derive closed formulas for the transfer and excitation probabilities. They depend on two parameters: the mean excitation energy z and the ratio q of the one nucleon transfer probability and the probability of a 1p-1h excitation. We obtain q and z by a fit to the experimental mass distribution and to the slope of the quasi-elastic cross section (at given scattering angle) in the inelastic channels .q is found to be close to 1. With these values of q and z, the calculated cross section exhibits resonance-like structures which are similar to the ones found experimentally. Preliminary calculations within TDHF also lead to large values of q.

40798 (CEA-N—2406, pp 20-23) **Fission of light nuclei with high angular momentum.** Nemeth, J.; Irvine, J.M.; Okolovicz, J. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The fission of light nuclei is studied in an extended TDHF approximation with rotational constraint. It was found, that nuclei with mass number approximately 120-140 can fission if they have high angular momentum (L approximately 30-40 h). In the case of proton induced fission high energy (approximately 500 MeV) is needed to transfer such high angular momentum to the nucleus.

40799 (CEA-N—2406, pp 74-78) **Diffractive, diffusive and statistical aspects of deep-inelastic collisions in a parametrized S-matrix model.** Dean, D.R.; Lee, S.Y.; McGrath, R.L. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Deep-inelastic collisions are studied phenomenologically using a parametrized S-matrix approach. A statistical argument is used to demonstrate how the observed cross section is built up from different diffractive contributions, each with its own weight. The weight function is derived. The possibility of non-zero angular-momentum transfer is allowed for and it is shown that the spin polarization is particularly sensitive to the treatment of the Poisson sum. The spin alignment is considered and shown to be angle independent in the absence of statistical fluctuations.

40800 (CEA-N—2406, pp 83-86) **New phenomenological approach in treating fusion excitation functions.** Porto, F.; Sambataro, S. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

A new parametrization is proposed which allows us to draw a phenomenological formula able to reproduce the fusion excitation function for a wide range of colliding nuclei.

40801 (CEA-N—2406, pp 91-96) **Dynamical fusion barriers.** Dalili, D.; Lucas, R.; Ngo, C.; Suomijarvi, T.; Tomasi, E. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

We describe a phenomenological model which allows to compute fusion cross sections, for all combinations of projectiles and targets, at energies above the fusion threshold. The dynamical fusion barriers, which are an out-come of the model, are shown to be in many cases equal to the static fusion barriers. When not, the difference between these two quantities, which is called the dynamical energy surplus, is investigated as a function of different macroscopic parameters.

40802 (CEA-N—2406, pp 126-130) **Semiclassical description of hot nuclear systems.** Brack, M. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

We present semiclassical density variational calculations for highly excited nuclear systems. We employ the newly derived functionals tau[rho] and sigma[rho] of the extended Thomas-Fermi (ETF) model, generalized to finite temperatures. Excellent agreement is reached with Hartree-Fock (HF) results. We also calculated the fission barrier of ^{240}Pu as a function of the nuclear temperature.

40803 (CEA-N—2406, pp 131-133) **Investigation of the dynamics of ternary fission for the system ^{238}U + ^{238}U.** Xi-Zhen Wu; Maruhn, J.A.; Greiner, W. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

With the three center model we have studied the dynamics of ternary fission for the system ^{238}U + ^{238}U by solving the one-dimensional collective Schroedinger equation with the potential energy surface given by the liquid-drop model and the mass parameters given by the Werner-Wheeler method.

40804 (CEA-N—2406, pp 141-145) **Single-particle basis in an approximate treatment of the extended time-dependent Hartree-Fock theory.** Tohyama, M. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The single-particle basis that can be used in the extended time-dependent Hartree-Fock theory is studied in a simple one-dimensional collision model. It is shown that the conventional set of single-particle states, which are boosted initially with the velocity of the collision, can be used.

40805 (CEA-N—2406, pp 154-156) **Elastoplasticity tensor for nucleus-nucleus collisions.** Lukasiak, A.; Noerenberg, W. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Within the framework of dissipative diabatic dynamics (DDD) the elastoplasticity tensor has been calculated for central nucleus-nucleus collisions. Results for ^{92}Mo+^{92}Mo are presented for three collective variables at various temperatures.

40806 (CEA-N—2406, pp 157-161) **New classical model for heavy ion reactions.** Smith, M.; Sperber, D.; Stryjewski, J.; Zielinska-Pfabe, M. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

A classical hydrodynamical model with the inclusion of collective shape deformations is used to explore the mechanism of heavy ion collisions.

40807 (CEA-N—2406, pp 146-149) **Realistic effective interaction for nucleus - Nucleus collision.** Basu, D.N.; Chaudhuri, A.K.; Sinha, B.C. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

The exchange effect for nucleus-nucleus potential has been computed by folding in the density matrices with a finite range effective interaction, using M3Y and Paris potential. The "effective" exchange interaction is both density and energy dependent. The potential agrees closely with phenomenology.

40808 (CEA-N—2406, pp 172-178) **Complete statistical treatment of heavy target fragmentation in high energy proton nucleus collisions.** Sa Ban Hao. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

An equilibrium statistical model of nuclear fragmentation in high energy proton-nucleon reactions is performed by Monte Carlo simulation. The fragment mass-yield distributions are visually well reproduced.

40809 (IAEA-SMR—93, pp 57-62) **New level density formula for arbitrary single particle level density by number theoretical methods.** Anzaldo Meneses, A.M. (Kernforschungszentrum Karlsruhe G.m.b.H., Germany, F.R.). Apr 1984. NTIS (US Sales Only), PC A15/MF A01. File Number DE85781405. (CONF-820163—Pt.1).

From Winter college on nuclear physics and reactors; Trieste, Italy (25 Jan 1982).

The nuclear level density problem has been treated using modern methods of analytical number theory. In particular the asymptotical calculation of the partition function leads to more rigorous and more general results than the usual Bethe-formula. The partition function is expressed with the help of a Dirichlet series. The parameters of this series determine the obtained level density. For the case of constant single particle level density the resulting parameters yield the usual Bethe-formula. In general the parameters lead to another energy and nucleon number dependence of the level densities. They correspond to more general single particle level densities which include the shell structure. Also the BCS type of pairing has been taken into account.

40810 (INIS-mf—9311, pp 355-365) **Lifetime of hypernuclei.** Dabrowski, J. (Institute for Nuclear Studies, Warsaw (Poland)). 1984. NTIS (US Sales Only), PC A21/MF A01. File Number DE85781453. (CONF-8404243—).

From Workshop on the future of intermediate energy physics in Europe; Freiburg im Breisgau, F.R. Germany (10 Apr 1984).

The author discusses the decays of hypernuclei caused by the hadronic decay of hyperons inside the nucleus.

40811 (INIS-SU—282, pp 155) **Effective noncoulomb charge-dependent forces in atomic nuclei.** Kasymbalinov, R.N.; Sapershtejn, Eh.E. 1984. (In Russian). NTIS (US Sales Only), PC A99/MF A01. File Number DE85780893. (CONF-8404189—Summ.).

40840 (JINR—D-7-83-644, pp 182-201) **Fragmentation of simple nuclear excitations.** Solov'ev, V.G. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The main ideas of the nucleus quasiparticle-phonon model (QPM) are presented, as well as its comparison with other models. Advantages of the above model are shown. Experimental data on fragmentation of deep hole and two-quasiparticle states in spheric nuclei are reviewed. Fragmentation of these states in the framework of QPM is described. Results of calculations are compared with experimental data. A condition with giant resonances is given. Fragmentation of collective states is considered using the example

of giant dipole resonance in sup(140,142)Ce and giant isoscalar quadrupole resonance in ^{208}Pb. Fragmentation peculiarities of charge-exchange collectiVe states in spheric and deformed nuclei are discussed. It is shown that in the framework of QPM energy centroids and widths of giant resonances are well described in the framework of QPM. The interaction of quasiparticles with phonons is responsible for the fragmentation of single particle and collective states in atomic nuclei.

40841 (JINR—D-7-83-644, pp 202-215) **Quadrupole collective excitations in rapidly rotating nuclei.** Mikhajlov, I.N. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The spectrum of collective quadrupole excitations in nuclei is investigated. The average nucleus field has the axial symmetry and rotation occurs relatively to this axis. Dependences of the spectrum of quadrupole oscillations on rotation rate for classic liquid drop (CLD) and for a drop of fermi-liquid (DFL) with fissionability parameter X=0.62 (^{154}Er) are presented. The dependence of probabilities of E2-transitions between single-phonon and phonon-free states on rotation rate for CLD and DFL with fussionability parameter X=0.62 (^{154}Er) is also presented. It is shown that for CLD collective E2-transition of states of yrast-consequence is absolutely forbidden. For DFL transitions are possible that lead to decay of phonon-free state with the excitation of phonons of γ-modes and decrease of angular momentum.

40842 (JINR—D-7-83-644, pp 229-250) **Dissipative diabatic dynamics: a shell-model approach to large-amplitude collective nuclear motion.** Norenberg, W. (Technische Hochschule Darmstadt (Germany, F.R.). Inst. fuer Kernphysik). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The aim of this paper is to describe the basic concept of dissipative diabatic dynamics (DDD) as a semiclassical generalization of giant vibrations to large amplitudes. The elastoplastic response of nuclear matter described by DDD is put in perspective to other types of the nuclear response within a phase diagram of nuclear dynamics. Results on diabatic single-particle states, potentials and masses obtained from a two-center shell model are discussed. The analysis of time-dependent Hartree-Fock theory calculations for a nucleus-nucleus collision indicate that the diabatic motion is a good approximation. Finger prints from the diabatic nuclear response are discussed for cross sections of nucleus-nucleus collisions, in particular for the preequilibrium emission of neutrons.

40843 (JINR—D-7-83-644, pp 259-262) **Liquid-particle model for nuclear dynamics.** Strutinsky, V.; Magner, A. (AN Ukrainskoj SSR, Kiev. Inst. Yadernykh Issledovanij); Brack, M. (Regensburg Univ. (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The liquid-particle model for nuclear dynamics is discussed. Combined liquid-quantum dynamics is described. In solving the dynamic problem the nuclear surface as a dynamic variable is introduced. The giant zeroth-sound resonances are studied.

40844 (JINR—D-7-83-644, pp 251-258) **Nuclear-nucleus collisions: intrinsic motion with external correlations.** Munchow, L.; Pfitzner, A. (Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (German Democratic Republic)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Nucleus-nucleus collision, its intrinsic motion with external correlations are discussed. A consistent treatment of collective and intrinsic motion allows to include external correlations beyond the mean field approach. These correlations represent fluctuations of the external mean field. These fluctuations change the occupation numbers of the single-particle states and must be considered together with the two-body collisions. Equilibration and relative motion are intimately connected because the collision term becomes operative, via the time-dependence of the external mean field.

40845 (JINR—D-7-83-644, pp 310-318) **Escape of light charged particles and interaction of heavy ions with nuclei.** Volkov, V.V. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Some aspects of interaction of two-compound nuclei manifesting themselves in the emission of light charged particles, primarily α-particles, are considered. The consideration embraces deep inelastic collisions and collisions with partial dissipation of kinetic energy for energies of bombarding ions lower than 10 MeV/nucleon. The main attention is paid to the mechanism of production of nonequilibrium α-particles due to multinucleon transfers. In these reactions α-particle is produced due to transfer of all nucleons of colliding nucleus, except 4 nucleons of 1 s shell which form the flying-out α-particle to the target nucleus. The attention is paid to shell effects in reactjons of deep inelastic transfers and a special role of α-cluster configuration of a binary nuclear system in the case of its evolution to complete fusion.

40846 (JINR—D-7-83-644, pp 332-341) **Kinematic consideration of reactions of tangential interaction as a method of an analysis of experimental data.** Tarantin, N.I. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

In the framework of the kinematic method experimental data on reactions of tangential interaction of two complex nuclei are analyzed. The foundations of kinematic consideration of tangential interaction of two complex nuclei are given. Multiplicity dependences of γ-quanta on the mass ratio and kinetic energy of reaction products of nucleon transfer are discussed. Polarization of nucleon transfer reaction products is studied. Kinematic limits for nonequilibrium α-particles emitted due to evolution and decay of the binary nuclear system are considered in detail, as well as conditions for superfluid transfer of nucleon pairs in the case of collision of two nuclei of superfluid type.

40847 (JINR—D-7-83-644, pp 349-353) **Gasdynamic model of intermediate energy heavy ion collisions and high-energy particle emission.** D'yachenko, A.T.; Rubchenya, V.A.; Ehjsmont, V.P. (Radievyj Inst., Leningrad (USSR)). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Emission of high-energy particles is investigated for cases of collision of heavy ions of intermediate energies in the framework of gasdynamic model. Nonequilibrium equation of state corresponding to fermi-ellipsoid is used in calculations. In the process of collision the smaller nucleus makes "a tube of nuclear matter" in the target nucleus. The process of nucleus colllision with the tube is performed in two stages: initial compression and the following relaxation. Results of calculations of compression degree on the collision energy for nucleon are presented, as well as maximum velocity in the process of system expansion for Brakner interaction and Skyrme interactiion. Spectra of neutrons in the ^{12}C+^{158}Gd reaction and proton spectra in the ^{16}O+^{197}Au reaction are calculated.

40848 (JINR—D-7-83-644, pp 354-370) **Multifragmentation of heavy nuclei.** Bondorf, Ya. (Niels Bohr Inst., Copenhagen (Denmark)); Mishustin, I.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); Pesik, K. (Nordic Co-ordination Committee for Atomic Energy, Risoe (Denmark)). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

A statistic model is developed for the description of the breakup process of excited heavy nuclei. All possible processes determining the state of nuclear matter at excitation energies approximately 10 MeV/nucleon are investigated in detail. Dynamic effects determining excitation parameters of the nuclear system appearing during collision of heavy ions are considered. A simple analytical model for the calculation of mass distributions of flying-out fragments and their multiplicity is suggested. The model demonstrates that multifragmentation ("complete explosion") of colliding nuclei takes place in cases of not very low initial energies and more central collisions. The important role of effects of incomplete statistic equilibrium is noted.

40849 (JINR—D-7-83-644, pp 128-157) **Beta decay far from stability and its role in nuclear physics and astrophysics.** Klapdor, H.V. (Max-Planck-Institut fuer Kernphysik, Heidelberg (Germany, F.R.)). 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

A microscopic description of the beta decay of nuclei far from stability is presented. Predictions of fission barrier heights, optical potentials, beta decay half-lives, β-delayed neutron and fission rates have been obtained for approximately 6000 neutron-rich nuclei between beta stability line and neutron drop line. Consequences of obtained data are applied to astrophysics (the astrophysical r process, cosmochronology, galactic neutrons) and nuclear physics (fission barriers from β-delayed fission, double beta decay, nucleon density distributions and charge exchange reactions, electron and antineutrino spectra from nuclear reactors).

40850 (JINR—D-7-83-644, pp 319-323) **Effective cluster numbers and heavy fragmentation processes of atomic nucleus.** Kadmenskij, S.G.; Smirnov, Yu.F.; Chuvil'skij, Yu.M. (Moskovskij Gosudarstvennyj Univ. (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of describing clusterization processes of atomic nuclei is considered. The concept of effective number Wsub(x) of composite particles x in nucleus A is used as a physical value characterizing cluster degrees of nucleus freedom. Value Wsub(x) is determined as the sum of spectroscopic factors Wsub(xc) in all opened and closed c channels of decay of nucleus A with the production of particle x and daughter nucleus (A-Asub(x)). Wsub(x) values for a number of nuclei are presented. It is shown that Wsub(x) values rise with A growth according to the Wsub(x) approximately Asup(4/3) law and for A>=40 surpass A values. Forbidden factors for heavy fragmentation of atomic nuclei are discussed.

40851 (JINR—D-7-83-644, pp 371-380) **Fast fission phenomena.** Ngo, C. 1983. NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The mechanism of the fussion process is investigated. Particular attention is paid to the fast fission mechanism and under which conditions it can be observed. The consideration is based on the results of a dynamical model. Fast fission can occur in two cases: the fission barrier of the compound nucleus vanishes due to angular momentum and the saddle configuration of the compound nucleus is too compact (quasiffision). The problem is discussed for the $^{40}Ar+^{165}Ho$ reaction. In the framework of the model the fusion occurs if the effective fissility parameter introduced by Swiatecki is smaller than about 47.

40852 (JINR—D-7-83-644, pp 389-404) **Analysis of a fissility of nuclei by light and heavy ions.** Ignatyuk, A.V.; Smirenkin, G.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

The problem of fissionability of nuclei by light and heavy ions is discussed. Microscopic methods of calculating statistic characteristics of nuclei are considered. Phenomenologic analysis of the influence of shell and collective effects on the density of levels and fissionability of nuclei is performed. The data on fission barriers of preactinide nuclei are presented. The conclusion is made that a sufficiently well agreed sum of data on fission barriers of preactinide nuclei with the mass number Asub(f)>170 exists nowadays, it was obtained in reactions with protons, α particles and ^{6}Li ions. It is noted that the account of collective effects in the description of density of levels of excited nuclei permits to eliminate many discrepancies in results of analysis of fissionability of nuclei.

40853 (JINR—D-7-83-644, pp 420-430) **Investigation of the pre-actinide nucleus fission.** Muzychka, Yu.A.; Pustyl'nik, B.I. 1983. (In Russian). NTIS (US Sales Only), PC A25/MF A01. File Number DE85781272. (CONF-830444—).

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Fission of preactinide nuclei is investigated. In the framework of the statistical model the experimental data on fission cross sections of compound nuclei from ^{170}Yb to ^{210}Po by ^{12}C ions and angular distributions of fission fragments are analyzed. Dependences of fission barriers and inverse effective moment of inertia Isub(sph)/Isub(eff). (Isub(sph) is solid body moment of sphere inertia equalling the given nucleus) on Z^2/A parameter, are presented. Angular distributions of fission fragments in the $^{197}Au(^{22}Ne, f)$ and $^{197}Au(^{22}Ne, \alpha f)$ reactions are measured. The angular distribution of fission fragments of the compound ^{219}Ac nucleus calculated with account of contributions of emissive fission agree well with experiment at the critical value of the angular momentum lsub(cr)=90 and ratio Isub(sph)/Isub(eff)--1.2. The angular anisotropy is 6.2.

40854 (LA-UR—85-2075) **High nuclear temperatures by antimatter-matter annihilation.** Gibbs, W.R.; Strottman, D. (Arizona State Univ., Tempe (USA); Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 12p. (CONF-850315—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014113.

From Conference on antinucleon and nucleon-nucleus interactions; Telluride, CO, USA (18 Mar 1985).

It is suggested that the quark-gluon phase be created through the use of antiproton or antideuteron beams. The first advantage to this method, using higher energy antiprotons than 1.5 GeV/c, is that the higher momenta antiprotons penetrate more deeply so that mesons produced are more nearly contained within the nucleus. Another advantage is that the annihilation products are very forward-peaked and tend to form a beam of mesons so that the energy density does not disperse very rapidly. Calculations were performed using the intranuclear cascade to try to follow the process of annihilation in some detail. The intranuclear cascade type calculation method is compared to the hydrodynamic approach. 8 refs., 8 figs. (LEW)

40855 (LA-UR—85-2119) **Nuclear interlevel transfer driven by electronic transitions.** Solem, J.C.; Rinker, G. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 20p. (CONF-8505174—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014103.

From IDA workshop on gamma-ray lasers; Alexandria, VA, USA (21 May 1985).

We show how a gamma-ray laser might be made by optically exciting a transfer of population from a long-lived isomer to an energetically adjacent short-lived state of the same nucleus. We compare the advantages of using transitions of high multipolarity versus transitions of low multi-polarity. Preliminary numerical investigations of the mechanism show it to be somewhat favorable. 35 refs., 4 figs.

40856 (OUP—83-05) Manifest rotation symmetric expressions for angular momentum eigenfunctions. Eeg, J.O.; Wroldsen, J. (Oslo Univ. (Norway). Fysisk Inst.). Jan 1983. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781057.

Manifest rotation symmetric expressions for eigenfunctions for spin s, orbital angular momentum l and total angular momentum j = l+s, ... , /l-s/ in terms of (2j+1) x (2s+1) multipole transition matrices (MTM) is given. These matrices, which are irreducible tensor matrices, have an algebra together with ordinary spin matrices for spin s and spin j. Explicit expressions for MTM's and their algebra are given for angular momenta <-3. By means of some examples it is shown that within this formalism angular integrations in central field problems will be simplified considerably. Thus the formalism turns out to be very useful for instance for calculations within the MIT-bag and also within spin-spin interactions in atomic physics.

40857 (OUP—84-17) Manifest rotation symmetric expressions for angular momentum eigenfunctions II. Eeg, J.O.; Wroldsen, J. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1984. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781058.

Expressions for eigenfunctions for spin s, orbital angular momentum l, and total angular momentum j in terms of (2s+1) x (2j+1) multipole transitions matrices (MTM) is considered. In a previous report explicit expressions were given for angular momenta s, j <= 3. The present report completes the previous work by giving expressions for arbitrary values of s, l and j.

40858 Quarks, bags and the nucleon-nucleon interaction. Brown, G.E. (State Univ. of New York, Stony Brook). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 389-397(1983). (CONF-821050—). Contract AC02-76ER13001.

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

It is argued that pionic couplings have a greater influence on the short-range nucleon-nucleon interaction than the quark degrees of freedom. 20 references, 1 figure.

40859 First order interpretation of optical potentials. Ray, L. (Univ. of Texas, Austin). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 121-142(1983). (CONF-821050—).

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

The ability of local, second order, spin-dependent Kerman, McManus and Thaler optical potential models to describe proton nucleus elastic scattering data from 300-800 MeV is reviewed. Calculations which rely on the impulse approximation are fairly successful at 800 MeV but fail significantly for energies less than 500 MeV. Evidence is presented which indicates that medium effects are quite important in modifying the true proton-nucleon effective interaction from that given by the impulse approximation throughout the intermediate energy range, even at 800 MeV. It is concluded that the trends of the intermediate energy optical potentials can be accounted for qualitatively in terms of non-relativistic multiple scattering theory and medium modified effective interactions. The Glauber model and Dirac phenomenological approaches are briefly discussed. 49 references, 23 figures.

40860 Momentum-space optical potential SND elastic scattering calculations. Wolfe, D.H.; Hynes, M.V.; Picklesimer, A.; Tandy, P.C.; Thaler, R.M. (Kent State Univ., OH). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 149(1983). (CONF-821050—).

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

Initial results are presented for proton-nucleus elastic scattering observables calculated with a newly developed microscopic momentum-space code. This is the first phase of a program to treat elastic and inelastic scattering consistently via an integral equation approach. A number of microscopic features which are often approximated or ignored are quite amenable to exact treatment within this approach, e.g. non-local effects in elastic scattering, and inelastic effects which are non-linear in the NN t-matrix and target densities but nevertheless confined to one participating nucleon. 3 references.

40861 Three-body forces. Friar, J.L. (Los Alamos National Lab., NM). *AIP (American Institute of Physics) Conference Proceedings;* No. 57, 378-388(1983). (CONF-821050—).

From Cyclotron facility workshop; Bloomington, IN, USA (27 Oct 1982).

Three-body forces are defined and their properties discussed. Evidence for such forces in the trinucleon bound states and scattering reactions is reviewed. The binding energy defects of the trinucleon bound states, the ^{3}He charge density, the Phillips line for doublet n-d scattering lengths, and three-nucleon breakup reactions are discussed, together with the possible influence of three-body forces on these observables. 23 references, 6 figures, 1 table.

40862 (AD-A—153676/2/XAB) Comparison of calculations and measurements of the off-axis radiation dose (SI) in liquid nitrogen as a function of radiation length. Master's thesis. Cromar, P.F. (Naval Postgraduate School, Monterey, CA (USA)). Dec 1984. 73p. NTIS, PC A04/MF A01.

Results are presented from a study of the off-axis x and gamma radiation field caused by a highly relativistic electron beam in liquid nitrogen at various path lengths out to 2 radiation lengths. The off-axis dose in silicon was calculated using electron/photon transport code CYLTRAN and measured using thermal luminescent dosimeters (TLD's). Calculations were performed on a CDC-7600 computer ar Los Alamos National Laboratory and measurements were made using the Naval Postgraduate School 100-MeV Linac. Comparison of the results is made and CYLTRAN is found to be in agreement with experimentally measured values. The CYLTRAN results are extended to the off-axis dose caused by a 100-MeV electron beam in air at Standard Temperature and Pressure (STP).

40863 (AERE-R—11418) Projectile charge dependence of heavy ion stopping. Read, P.M. (UKAEA Atomic Energy Research Establishment, Harwell. Nuclear Physics Div.). Oct 1984. 96p. HMSO, London, price Pound 7.00.

The dependence of the electronic stopping power upon projectile charge has been investigated by measuring the energy loss of 3 MeV/u He, Li, C and O ions in carbon foils. The stopping powers for He and Li ions are found to scale approximately as the square of the projectile charge Z_1^2, which is consistent with current theories which predict a near cancellation of the Z_1^3 and Z_1^4 corrections to Bethe stopping theory. For the heavier ions all charge states show departures from Z_1^2 scaling, considerably in excess of the predictions of current theory. The energy-loss data for the various charge states of individual ions converge as the foil thickness increases. To interpret the heavy-ion energy-loss data, account has been taken of the processes of charge exchange that the projectile undergoes as it passes through the target. This required the measurement of the cross sections for charge exchange of 3 MeV/u O ions in carbon. The energy loss results indicate that a significant part of the heavy ion total stopping arises from charge-changing events. The magnitude of this component is comparable to the polarization and Bloch correction terms. A procedure for the incorporation of charge changing energy loss in stopping theory is discussed.

40864 (BARC—1222) BARC-35: A 35 group cross-section library with P_3-anisotropic scattering matrices and resonance self-shielding factors. Garg, S.B.; Sinha, A. (Bhabha Atomic Research Centre, Bombay (India). Health Physics Div.). 1984. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781059.

A 35 group cross-section set with P_3-anisotropic scattering matrices and resonance self-shielding factors has been generated from the basic ENDF/B-IV cross-section Library for 57 reactor

elements. This library, called BARC35, is considered to be well suited for the neutronics and safety analysis of fission, fusion and hybrid systems.

40865 **(EFI—621(11)-83) Comparative spectra and total cross sections of pair production by photons in various crystals.** Avakyan, R.O.; Akopov, N.Z.; Darbinyan, S.M.; Oganesyan, K.M. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701749.

The production of electron-positron pairs by high energy photons in crystals is considered. The analytical expression for the total cross section of coherent pair production by photons in crystals is obtained. The energy and orientation dependence of the differential and total cross sections of the pair production in diamond, silicon and corundum crystals by 1 GeV, 5 GeV and 10 GeV photons is investigated. 8 references, 9 figures.

40866 **(EFI—669(59)-83) Above-barrier reflection by the planar channelling of electrons and positrons in crystals.** Ajrapetyan, G.A.; Babakhanyan, Eh.A. (Erevanskij Fizicheskij Inst. (USSR)). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701750.

The behaviour of coefficients of Bloch waves reflection from potential barrier and well for the nearest above-barrier energetic band as a function of quasimomentum in the Brillouin zone is investigated for different energies of channeled electrons and positrons. The variation of the above-barrier reflection coefficients for the whole energy spectrum by transition from one energy band to another for each fixed energy value of insident particles is studied too. The oscillating behaviour of relection coefficients is shown. 6 references, 6 figures.

40867 **(IC—84/110) Core electron energy loss spectra in metallic La.** Nuroh, K. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1984. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701571.

The calculation of relative intensities for electron excited $4d^{10} \rightarrow 4d^{9}nf$, epsilon f transitions in metallic La has been discussed on the basis of the inelastic electron mechanism invoked by Netzer et al. [Phys. Rev. Lett. 51, 211(1983)]. The analysis indicates that for incident electron energies far away from the core level excitation threshold, direct Coulomb interaction processes are the most prominent; as the incident electron energy approaches threshold, exchange processes feature as prominently, giving support to the stage-wise breakdown of selection rules in electron impact excitation suggested by Netzer et al.

40872 (JAERI-M—83-223) **Stopping power for ions in solids.** Kitagawa, Mitsuo. (Japan Atomic Energy Research Inst., Tokyo). Dec 1983. 30p. (In Japanese). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701807.

During these two decades, the researches of the stopping power for ions in solids have made several progresses in the fields of atomic collisions in solids, radiation physics, nuclear fusion and related regions of ion-solid interactions. In the case of the stopping power for light ions at high energy region, the detailed analyses of the mean ionization energy were performed for many kinds of solids. The experimental analyses of the Z_1^3 and Bloch corrections were also made to measure the higher order contributions quantitatively. The experimental formula and data tables of stopping power for H and He ions covered over the region from low to high energies were derived by use of the parameterization methods. As far as the heavy ions concern, the theoretical analyses of the effective charge for stopping power were performed, and it turned to be able to analyze the experimental data within the resolution of +-10--20%.

40873 (JAERI-M—84-018) **Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead.** Tanaka, Shun-ichi; Takeuchi, Kiyoshi. (Japan Atomic Energy Research Inst., Tokyo). Feb 1984. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701808.

Exposure, dose-equivalent and absorbed-dose buildup factors are calculated using a discrete-ordinates direct integration code, PALLAS-PL, SP-Br, for water, concrete, iron and lead, typifying materials of low, medium, high atomic number for gammaray sources at plane normal and isotropic incidences. These data include the effects of secondary photon sources arising from Compton scattering, Bremsstrahlung and annihilation. Inclusion of Bremsstrahlung source has great influence on these buildup factors for high energy photons in materials of high atomic number. The calculated buildup factors are tabulated for incident energies of 0.1 to 15 MeV (0.4 to 15 MeV only for lead) and penetration depths up to 40 mean-free-paths in each material.

40874 (JINR—1-84-372) **Coherent bremsstrahlung from 10 GeV positrons in thin Si crystal.** Bulgakov, N.K.; Vodop'yanov, A.S.; Vojtkovska, I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 3p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701755.

Experimental and calculated spectra of radiation are presented for 10 GeV positrons with small incident angles with respect to the (110) plane in silicon single crystal 103 μm in thickness. It is shown that the spectral density of radiation, calculated using coherent bremsstrahlung theory taking into account incident beam angular divergence, agrees with experimental data for incident angles behind the critical channeling angle. 11 references, 2 figures.

40875 **(JINR—E-2-84-506) Flat problem of the linear transport theory for uniform semispace and Mnatsakanjan semigroup method.** Chernenko, L.P.; Zastavenko, L.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems; Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701809.

A stationary kinetic equation of the linear transport theory in a uniform semispace is considered. The aim of the work is to reduce the problem to the solution of equation with a diminished number of variables. With this aim a semigroup of operators associated with the initial kinetic equation is introduced into consideration. The result is reducing of the problem to the albedo kernel R(p, q) in the region of $p_3<0$, $q_3> = 0$ determination (q is the momentum of particle which enters the semispace; p- the momentum of particle which leaves the semispace; q_3 and p_3 are the momentum projections on the normal to the semispace surface). This result seems to be obtained using the Ambartsumian method of invariant immersion as well. 2 references.

40876 **(JINR—R-3-83-892) Search for the phonon analog of Cherenkov radiation at the neutron passage flight through matter.** Ignatovich, V.K.; Mittag, Z.; Pul'ts, V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1983. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701804.

The transmission of a beryllium sample was investigated with the aim to find out the phonon analog of Cherenkov radiation at the neutron flight through matter. Slowing down of the neutrons and additional scattering cross section were used for search for effects. The absence of effects leads to some limitations on phonon dispersion curve parameters. 6 references, 6 figures.

40877 **(JINR—R-14-84-414) Thermal neutron scattering in MBBA and EBBA solid phases.** Belushkin, A.V.; Zaleski, T.; Natkanets, I.; Dolganov, V.K.; Sheka, E.F.; Navrotsik, V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701803.

The diffraction and inelastic incoherent neutron scattering (IINS) measurements were performed on the liquid crystal samples of MBBA and EBBA. The nematic, glasslike and stable crystal phases were investigated. The diffraction and IINS spectra were measured simultaneously on the KDSOG spectrometer at the IBR-30 reactor. The diffraction spectra were used to control the phase situation at the sample. From the experimental IINS results the weighted phonon densities of states are obtained and specific heat is calculated. The difference of these characteristics for glasslike and stable crystal phases is discussed. 14 references, 9 figures.

40878 **(LA-UR—85-1756) Configuration for the WNR data acquisition system for neutron measurements.** Nelson, R.O.; Barrus, D.M.; Cort, G.; Goldstone, J.A.; McMillan, D.E.; Miller, L.B.; Poore, R.V.; Machen, D.R. (Los Alamos National Lab., NM (USA); Scientific Systems International, Los Alamos, NM (USA)). 1985. Contract W-7405-ENG-36. 5p. (CONF-850579—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE85012748.

From 4. topical conference on computerized data acquisition in particle and nuclear physics; Chicago, IL, USA (19 May 1985).

The configuration for a new data acquisition system for the Weapons Neutron Research Facility at the Los Alamos National Laboratory is introduced. The system utilizes a FASTBUS front-end for real-time data collection and DEC computers for the experiment control and analysis. A local area network is used extensively within the overall system. 6 refs., 3 figs.

40879 **(ORNL/TM—9179/R1) Updated users' guide for SAMMY: multilevel R-matrix fits to neutron data using Bayes' equations. Revision 1.** Larson, N.M. (Oak Ridge National Lab., TN (USA)). Apr 1985. Contract AC05-84OR21400. 70p. NTIS, PC A04/MF A01; GPO Dep. File Number DE85015077.

In 1980 the multilevel multichannel R-matrix code SAMMY was released for use in analysis of neutron data at the Oak Ridge Electron Linear Accelerator. Since that time, SAMMY has undergone significant modifications: (1) User-friendly options have been incorporated to streamline common operations and to protect a run from common user errors. (2) The Reich-Moore formalism has been extended to include an optional logarithmic parameterization of the external R-matrix, for which any or all parameters may be varied. (3) The ability to vary sample thickness, effective temperature, matching radius, and/or resolution-broadening parameters has been incorporated. (4) To avoid loss of information (i.e., computer round-off errors) between runs, the "covariance file" now includes precise values for all variables. (5) Unused but correlated variables may be included in the analysis. Because of these and earlier changes, the 1980 SAMMY manual is now obsolete. This report is intended to be complete documentation for the current version of SAMMY. In August of 1984 the users' guide for version P of the multilevel multichannel R-matrix code SAMMY was published. Recently, major changes within SAMMY have led to the creation of version O, which is documented in this report. Among these changes are: (1) an alternative matrix-manipulation method for use in certain special cases; (2) division of theoretical cross-section generation and broadening operations into separate segments of the code; (3) an option to use the multilevel Breit-Wigner approximation to generate theoretical cross sections; (4) new input options; (5) renaming all temporary files as SAM??.DAT; (6) more sophisticated use of temporary files to maximize the number of data points that may be analyzed in a single run; and (7) significant internal restructing of the code in preparation for changes described here and for planned future changes.

40880 **(RAL—84-100) Occurence of an effective anharmonic velocity dependent potential.** Gunn, J.M.F. (Rutherford Appleton Lab., Chilton (UK)). Nov 1984. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781053.

An integrable dynamical problem of a classical neutral particle interacting with an inhomogeneous magnetic field via a magnetic dipole moment is considered, which had previously been studied quantum mechanically. The equation for the centre of mass velocity is of second order resembling that of an anharmonic oscillator with velocity replacing position in the equation. The velocity undergoes curious oscillations, where the spin and centre of mass degrees of freedom exchange energy, although there is also, in general, a uniform component to the velocity. An application to the motion of a classical "neutron" in a magnetic domain wall is discussed, and comparison with previous quantum treatments made.

40881 **(RAL—84-118) Neutron tests on samarium polarising filters.** Mayers, J.; Cywinski, R.; Jones, T.J.L.; Williams, W.G. (Rutherford Appleton Lab., Chilton (UK)). Dec 1984. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781054.

Results are presented of tests on resonance absorption neutron polarising filters containing Sm^{149}. The temperature dependence of the transmittance was measured as a function of neutron energy using the time of flight method on a pulsed source. These measurements allowed the polarising efficiencies of a $SmCo_5$ filter to be determined at temperatures between 0.012K and 0.045K. Preliminary data was also obtained for a filter consisting of a 1% solution of samarium in palladium and gave encouraging results. The authors describe some of the practical problems encountered during the measurements and discuss implications for future operations on the RAL Spallation Neutron Source.

40882 **(RAL—84-126) f-sum rule for magnetic neutron-electron scattering.** Lovesey, S.W.; Trohidou, K.N. (Rutherford Appleton Lab., Chilton (UK)). Dec 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701805.

The authors show that measurements of the first frequency moment of the response function observed in magnetic neutron scattering from electrons will feature details of the electron correlations. The first frequency moment, or f-sum rule as it is often called, for magnetic scattering is therefore distinctly different from the corresponding sum rule for particle density interactions. The behaviour of the magnetic f-sum rule as a function of wave vector

is illustrated, together with the mean-square energy transfer, in an approximate calculation for an electron plasma.

40883 **Measurement of transition radiation from medium-energy electrons.** Piestrup, M.A.; Kephart, J.O.; Park, H.; Klein, R.K.; Pantell, R.H.; Ebert, P.J.; Moran, M.J.; Dahling, B.A.; Berman, B.L. (Department of Electrical Engineering, Stanford University, Stanford, California 94305). *Physical Review [Section] A: General Physics;* **32**: No. 2, 917-927(Aug 1985). Contract W-7405-ENG-48.

The absolute differential production efficiencies (photons/eV sr electron) for x rays emitted from each of three transition radiators were measured for incident electron-beam energies of 17.2, 25, and 54 MeV. The radiators were made of stacks of 1.0-μm-thick foils: 18 foils of beryllium, 18 foils of carbon, and 30 foils of aluminum. The radiation spectra were most intense between 0.5 and 2.5 keV, peaking at 0.8, 1.3, and 1.3 keV, respectively. The angular distribution of the transition radiation from the beryllium-foil stack was measured for the three electron-beam energies and found to agree well with theoretical predictions. Owing to K-shell absorption, the photon-energy spectra from the carbon and aluminum stacks are narrowed. Theoretical calculations, which include both the two-surface interference and photon attenuation in the foil material, agree well with these data. A method of enhancing output using a split-foil stack is considered; cursory experiments with a split stack of Mylar foils showed enhanced emission. The use of transition radiation as a source of x rays for lithographic purposes may be practical.

40884 **Predictive models based on sensitivity theory and their application to practical shielding problems.** Bhuiyan, S.I.; Roussin, R.W.; Lucius, J.L.; Bartine, D.E. (Oak Ridge National Lab., TN (USA)). pp 54-63 of Proceedings of the sixth international conference on radiation shielding, 1. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.1).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

Two new calculational models based on the use of cross-section sensitivity coefficients have been devised for calculating radiation transport in relatively simple shields. The two models, one an exponential model and the other a power model, have been applied, together with the traditional linear model, to 1- and 2-m-thick concrete slab problems in which the water content, reinforcing steel content, or composition of the concrete was varied. Comparing the results obtained with the three models with those obtained from exact one-dimensional discrete ordinates transport calculations indicates that the exponential model, named the BEST model (for basic exponential shielding trend), is a particularly promising predictive tool for shielding problems dominated by exponential attenuation. When applied to a deep-penetration sodium problem, the BEST model also yields better results than do calculations based on second-order sensitivity theory.

40885 **Neutron-induced photon production in MCNP.** Little, R.C.; Seamon, R.E. (Los Alamos National Lab., NM (USA)). pp 151-160 of Proceedings of the sixth international conference on radiation shielding, 1. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.1).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

An improved method of neutron-induced photon production has been incorporated into the Monte Carlo transport code MCNP. The new method makes use of all partial photon-production reaction data provided by ENDF/B evaluators including photon-production cross sections as well as energy and angular distributions of secondary photons. This faithful utilization of sophisticated ENDF/B evaluations allows more precise MCNP calculations for several classes of coupled neutron-photon problems.

40886 **Standard reference data for gamma-ray transport in homogeneous media.** Trubey, D.K. (Oak Ridge National Lab., TN (USA)). pp 1241-1247 of Proceedings of the sixth international conference on radiation shielding, 2. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.2).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

An American Nuclear Society Standards Committee Working Group, identified as ANS-6.4.3, is developing a set of evaluated gamma-ray isotropic point-source buildup factors and attenuation coefficients for a standard reference data base. As a first step, a largely unpublished set of buildup factors calculated with the moments method is being evaluated by recalculating key values with Monte Carlo, integral transport, and discrete ordinates methods. Attention is being given to frequently neglected processes such as bremsstrahlung and the effect of introducing a tissue phantom behind the shield. The proposed standard will contain data for a source energy range from 15 keV to 15 MeV and for approximately 12 elements and 3 mixtures (water, air, and concrete).

40887 **Status of reactor shielding research in the United States.** Bartine, D.E. (Oak Ridge National Lab., TN (USA)). pp 526-535 of Proceedings of the sixth international conference on radiation shielding, 1. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.1).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

Shielding research in the United States continues to place emphasis on (1) the development and refinement of shielding design calculational methods and nuclear data and (2) the performance of confirmation experiments, both to evaluate specific design concepts and to verify specific calculational techniques and input data. The successful prediction of the radiation levels observed within the now-operating Fast Flux Test Facility (FFTF) has demonstrated the validity of this two-pronged approach, which has since been applied to U.S. fast breeder reactor programs and is now being used to determine radiation levels and possible further shielding needs at operating light water reactors, especially under accident conditions. A similar approach is being applied to the back end of the fission fuel cycle to verify that radiation doses at fuel element storage and transportation facilities and within fuel reprocessing plants are kept at acceptable levels without undue economic penalties. Finally, the same approach is being used to develop a sophisticated fusion reactor shielding technology and to study shields for possible future space power reactor systems.

40888 **(CEA-IPSN-DPS—84-04) Correspondence between activity and mass for the annual limits on intake by inhalation for occupational exposure.** Piechowski, J.; Le Tohic, J. (CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Protection). 1984. 101p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE85751931.

Annual limits on intake (ALI) by inhalation for occupational exposure are given in ICRP publication 30. They are expressed in activity (Bq), and this report gives the corresponding value in mass (g). For each isotope, the correspondence between activity and mass has been determined for gases, (noble gases, hydrogen) there are no ALIs but only limits of concentration in air (DAC). For these particular cases, the correspondence mass-activity has therefore been determined for the DACs, again taking into account the more restrictive DACs only.

40889 **(EHD—83-89) National dose registry of Canada.** (Department of National Health and Welfare, Ottawa, Ontario (Canada). Health Protection Branch). Apr 1982. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701639.

French version included.

In 1951, when the National Dosimetry Service was established by the Department of National Health and Welfare, a system of centralized records was created as an integral part of the new service. Over the last few years the dose record system has expanded in size and content, and improvements have been made in the

physical methods of record storage. In addition to the 250 000 individual dose records from the National Dosimetry Service, the National Dose Registry now includes internal tritium and external doses from nuclear generating stations, and radon daughter exposures submitted by uranium mining companies. With the increase in the use of radiation in the medical, industrial and research fields, it is becoming more important to have a comprehensive and readily accessible centralized record system. The Canadian National Dose Registry is particularly suited for continuing health risk studies of radiation workers and provides a base for future epidemiological studies.

40890 **(EHD—83-90) Environmental radioactivity in Canada, 1980. Radiological monitoring annual report.** McGregor, R.G.; Meyerhof, D.P.; Quinn, J.M.; Tracy, B.L. (Department of National Health and Welfare, Ottawa, Ontario (Canada). Health Protection Branch). 1983. 60p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701640.

The radiological surveillance program of the Department of National Health and Welfare is conducted to determine levels of environmental radioactivity in Canada and assess the resulting population exposures. In this report, the results for 1980 from the analyses of air, precipitation, water vapour, drinking water, milk, biota and bone for critical radionuclides are presented. The graphical format is used with extensions of the trend-lines to enable identification of changes in the levels and assessment of their potential health significance. All the levels measured during this period are below the permissible limits recommended by the International Commission for Radiological Protection.

40891 **(EHD—83-91) Investigation of radiation emissions from video display terminals.** Zuk, W.M.; Stuchly, M.A.; Dvorak, P.; Deslauriers, Y. (Department of National Health and Welfare, Ottawa, Ontario (Canada). Health Protection Branch). 1983. 52p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701641.

This report presents and discusses the results of radiation emission measurements carried out on video display terminals (VDTs) by the Radiation Protection Bureau. While the report is not intended to be an exhaustive review of all of the world literature on the subject, the more important studies performed on VDTs are summarized and reviewed. Attention is drawn to recent information which has not yet become generally available.

40892 **(EHD—83-102) Environmental radioactivity in Canada, 1981. Radiological monitoring annual report.** McGregor, R.G.; Quinn, J.M.; Tracy, B.L. (Department of National Health and Welfare, Ottawa, Ontario (Canada). Health Protection Branch). 1983. 49p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701637.

The radiological surveillance program of the Department of National Health and Welfare is conducted for the purpose of determining levels of environmental radioactivity in Canada and assessing the resulting population exposures. Special investigations were carried out during 1981 on bottled mineral waters and in conjunction with unusual occurences at nuclear reactor sites and a uranium refinery. Dose commitments have been estimated for the ongoing natural radioactivity, fallout and reactor studies. All measurements made during the year are below the limits recommended by the International Commission on Radiological Protection.

40893 **(IAEA-TECDOC—321) Research in radiation processing dosimetry. From International training course on the use of radiation and isotopic techniques in soil-plant relationships; Irapuato (Mexico) (3 Nov - 11 Dec 1981).

Regulations governing radiation dose limits established in the governing regulations of 1966 and 1977 are given, including their rationale and optimization.

40900 **(INIS-mf—9624) List of foreign standards in nuclear technology.** Brabec, D. (ed.). (Ceskoslovenska Komise pro Atomovou Energii, Prague). Apr 1984. 200p. (In Czech). NTIS (US Sales Only), PC A09/MF A01. File Number DE85781454.

The bibliography comprises international standards of CMEA, ISO, IEC and national standards of the USSR, GDR, FRG, France, UK, USA and Austria in the field of nuclear power,

nuclear engineering and the peaceful uses of ionizing radiation and radionuclides. Also included are standards covering other industrial sectors where the standardized object or activity is linked with ionizing radiation or radionuclides, as well as standards covering metrology, quality control and testing. The bibliography is complete with instructions for use, sources and a subject index and index of standard numbers.

40901 (INIS-mf—9644, pp 67-79) **ICRP recommendations and Canadian regulations.** Bush, W.R. (Atomic Energy Control Board, Ottawa, Ontario (Canada)). 1983. NTIS (US Sales Only), PC A08/MF A01. File Number DE85781436. (CONF-8211206—).

From Seminar on uranium and nuclear issues; Toronto, Ontario, Canada (2 Nov 1982).

The Canadian Atomic Energy Control Board is in the process of revising the radiation protection sections of its regulations in accordance with the latest recommendations of the International Commission on Radiological Protection. This paper discusses several issues involved in the proposed revisions.

40902 **(INIS-mf—9653) Working with radiation.** (British Nuclear Fuels Ltd., Risley). 1984. 41p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781452.

This simple booklet is written primarily to supply information about radiation, its potential dangers and radiation protection, to those working for, or considering taking up employment with, British Nuclear Fuels plc.

40903 **(INIS-mf—9656) Act of 14 July 1983 amending Act of 29 March 1958 relating to the protection of the population against the hazards of ionizing radiation.** (International Atomic Energy Agency, Vienna (Austria)). 6 Aug 1983. 8p. (In French and English). NTIS (US Sales Only), PC A02/MF A01. File Number DE85781437.

Published in the Moniteur Belge; translation into English appended.

The Act of 29 March 1958 on protection of the population against the hazards of ionizing radiation has been amended by an Act of 14 July 1983. The amendments concern, in particular, the non-involvement of communal authorities in decisions taken under the Act, the inclusion of the concept of the environment as a complement to public safety, and the extension of the powers of officials responsible for supervising certain aspects of the transport of radioactive materials. Finally, a new Section has been added which empowers the King to suspend or cancel decisions by decentralised administrations which affect the transport of nuclear substances.

40904 **(INIS-mf—9662) Modification of 28 November 1983 of the Radiation Protection ordinance of 30 June 1976.** (International Atomic Energy Agency, Vienna (Austria)). 28 Nov 1983. 4p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE85781438.

This Ordinance modifies the 1976 Radiation Protection Ordinance. The amendment allocates responsibility for radiation control among various governmental bodies. The Federal Office of Public Health is responsible for all radiation protection controls whenever they involve the protection of the public at large and the Accident Insurance Office is responsible for the protection of workers. Radiation control in nuclear installations is the responsibility of the Principal Division for the Safety of Nuclear Installations.

40905 **(INIS-mf—9716) Radiation Safety (Qualifications) Regulations 1980.** (International Atomic Energy Agency, Vienna (Austria)). 6 Jun 1980. 3p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781498.

These Regulations, promulgated pursuant to the provisions of the Radiation Safety Act, 1975-1979, require persons engaged in activities involving radiation to pass a radiation safety examination or to possess an approved qualification in radiation. The National Health and Medical Research Council is authorised to exempt persons from compliance with these requirements or, conversely, to impose such requirements on persons other than those designated. (NEA).

40906 **(INIS-mf—9718) Health (Radiation Safety) Act 1983 (Victoria) No. 9889 of 17 May 1983.** (International Atomic Energy Agency, Vienna (Austria)). 17 May 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781500.

This Act amends the Health Act 1958 by adding a new Section entitled Radiation Safety. In addition to establishing guidelines for the registration and licensing of certain radiation apparatus and sealed radioactive sources, this new Section authorises the Governor in Council to make regulations concerning, inter alia, transport and disposal of radioactive substances and public health and safety. The Act also sets up a Radiation Advisory Committee and a Radiographers and Radiation Technologists Registration Board of Victoria and amends the Nuclear Activities (Prohibitions) Act 1983 in respect of certain licensing provisions. (NEA).

40907 **(INIS-mf—9719) Health (Radiation Safety) Regulations 1984 (Victoria), No. 191 of 8 May 1984.** (International Atomic Energy Agency, Vienna (Austria)). 8 May 1984. 78p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85781501.

These Regulations promulgated pursuant to the Health Act 1958, as amended, repeal the Irradiating Apparatus and Radioactive Substances Regulations 1959. The provisions of the Regulations are designed to safeguard the public, patients and employees of registered premises from harmful effects of radiation. (NEA).

40908 **(INIS-mf—9721) Radiation Safety (General) Regulations 1983 (Western Australia).** (International Atomic Energy Agency, Vienna (Austria)). 21 Feb 1983. 82p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85781503.

The provisions of the Regulations cover, inter alia, the general precautions and requirements relating to radiation safety of the public and radiation workers and registration of irradiating apparatus or premises on which such apparatus is operated. In addition, the Regulations set forth requirements for the operation of such apparatus and for the premises involved. (NEA).

40909 **(INIS-mf—9723) Radiation Safety (Qualifications) Amendment Regulations 1984.** (International Atomic Energy Agency, Vienna (Austria)). 19 Apr 1984. 1p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781504.

These Regulations amend the Radiation Safety (Qualifications) Regulations 1980 by establishing the fees to be paid for the radiation safety examination to be passed by persons engaged in activities involving radiation. (NEA).

40910 **(INIS-mf—9727) Health (Radiation Safety) (Amendment) Regulations 1984 (Victoria) No. 236 of 10 July 1984.** (International Atomic Energy Agency, Vienna (Austria)). 10 Jul 1984. 3p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781505.

These Regulations make minor technical amendments to the Health (Radiation Safety) Regulations of the State of Victoria. (NEA).

40911 **(INIS-mf—9733) Order of the Ministry of Labour of 9 March 1971 on health and safety at work. General Ordinance.** (International Atomic Energy Agency, Vienna (Austria)). 16 Mar 1971. 28p. (In Spanish). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781506.

Published in the Boletin Official del Estado.

This Order regulates the health protection of workers in all fields, including the field of radiation. It lays down provisions to be complied with for the safety of workers involved with infrared and ultra-violet rays as well as with ionizing radiation. (NEA).

40912 (KIYI—83-11, pp 8-12) **Investigation of radiation dose fields from the fast neutron beams obtained from d(50 MeV) → Be reaction.** Popov, V.I.; Portman, A.I.; Burdin, A.A. (Institut Mediko-Biologicheskikh Problem, Moscow (USSR)); Chebotarev, E.E.; Bukanov, V.N.; Kataevskij, Yu.F.; Tkachenko, N.A. (AN Ukrainskoj SSR, Kiev. Inst. Yadernykh Issledovanij). 1983. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781275.

In Radiobiological studies on the U-240 isochronous cyclotron during 1982.

The uniformity of dose field of fast neutrons in the air at a distance of 125 cm from the target and depth dose distributions in tissue equivalent liquid and solid phantoms has been measured by ionization chambers of condenser type and IKS-A dosemeters. Qualitative evaluation of the IKS-A dosemeter sensitivity to the spectrum of neutrons with the mean energy of approximately 20 MeV is made.

40913 (KIYI—83-11, pp 12-15) **Inspection of Bragg-Gray theory applicability to the ionization chamber, irradiated by approximately 20 MeV neutrons.** Bukanov, V.N.; Kataevskij, Yu.F.; Tkachenko, N.A. 1983. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781275.

In Radiobiological studies on the U-240 isochronous cyclotron during 1982.

Applicability of the Bragg-Gray ratio to an ionization chamber manufactured of tissue-equivalent electroconductive composite material with a 1 cm^3 cavity has been studied. At a dose rate of neutron radiation 1.6 Gy/min, the chamber structure is shown to meet the requirements of the Bragg-Gray theory.

40914 (SAAS—321) **Occupational radiation exposure in the GDR in 1981.** Poulheim, K.F.; Rothe, W.; Scheler, R. (Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic)). 1984. 26p. (In German). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701643.

As in the previous year, the centralized monitoring of radiation workers for occupational exposure was carried out on the basis of film badges (38,415 persons), measurements with a whole-body counter and analyses of biosamples (252 persons in all). According to the film data, the monthly exposures exceeding 4 mGy totalled 645 including 41 doses higher than 10 mGy. Five workers received annual doses above 50 mGy, with the highest values being 840 mGy. For the exposed population as a whole and some subgroups, annual collective and mean annual doses have been given. In assessing internal exposure situation, use has been made of both data from the centralized monitoring program and those determined by some nuclear facilities themselves under the auspices of the SAAS. The results gave no indication of internal doses exceeding the annual limits of intake.

40915 (UCRL—88332) **Fabrication of a set of realistic torso phantoms for calibration of transuranic nuclide lung counting facilities.** Griffith, R.V.; Anderson, A.L.; Sundbeck, C.W.; Alderson, S.W. (Lawrence Livermore National Lab., CA (USA); Humanoid Systems, Carson, CA (USA)). 26 Oct 1983. Contract W-7405-ENG-48. 5p. (CONF-840512—22). NTIS, PC A02/MF A01; GPO Dep. File Number DE85013972.

From 6. congress of the International Radiation Protection Association; Berlin, F.R. Germany (7 May 1984).

A set of 16 tissue equivalent torso phantoms has been fabricated for use by major laboratories involved in counting transuranic nuclides in the lung. These phantoms, which have bone equivalent plastic rib cages, duplicate the performance of the DOE Realistic Phantom set. The new phantoms (and their successors) provide the user laboratories with a highly realistic calibration tool. Moreover, use of these phantoms will allow participating laboratories to intercompare calibration information, both on formal and informal bases. 3 refs., 2 figs.

40916 (CBPF-NF—035/83) **Comment on 'Convexity of the free energy in some real-space renormalization-group approximations'.** Tsallis, C. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701710.

A recent paper by Kaufman and Griffiths is commented which induces to think that certain types of real-space renormalization group are not able to preserve standard thermodynamic convexity properties. It is pointed out that this is not the case for at least one of those types, if form-invariance (under uniform translation of the energy scale) of a central equation is demanded.

40917 (DOE/ER/10864—1) **International project in history of solid state physics. Final report.** Weart, S.R. (American Inst. of Physics, New York). Sep 1984. Contract FG02-81ER10864. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014843.

The International Project in History of Solid State Physics got underway in 1981, planning a large collaborative program to preserve and make known the history of this field. The Project's scholars and sponsors were spurred by the realization that although solid state physics is one of the most important influences on late twentieth civilization, its history was all but unknown to historians, to the public at large, and even to most physicists. The chief aim of the Project was to create a new and enduring area of historical activity, and this aim has been accomplished. As we hoped, most of the scholars who have been drawn to this field plan to continue to study and publish in the history of solid state physics, building upon the research and resources assembled under the Project.

40918 (IFT-P—11/84) **Crystalline and amorphous solid phases in the classical hard sphere system.** Aguilera-Navarro, V.C.; Souza, R.F.T.; Llano, M. de; Mini, S. (Instituto de Fisica Teorica, Sao Paulo (Brazil)). 1984. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701709.

A qualitative crystalline, as well as amorphous, solid behavior is simultaneously extracted for a classical hard sphere system from its known virial power series expansion in the density augmented by only one further virial coefficient, taken from an extrapolated estimate of the Cauchy-Hadamard radius of convergence criterion. Results are compared with computer simulation data.

40919 (IS-T—1136) **Nonlinear polariton effects in naphthalene.** Stevenson, S.H. (Ames Lab., IA (USA)). Jul 1985. Contract W-7405-ENG-82. 223p. NTIS, PC A10/MF A01; GPO Dep. File Number DE85015589.

Thesis.

Resonant second harmonic generation (SHG) and two-photon excited emission (TPE) were studied in pure, strain-free crystals of naphthalene at frequencies near that of the (0,0) a-exciton in order to probe the relationship between the two signals and to investigate the effect of polariton states on second order nonlinearities in molecular crystals. The results are presented, and the strong coupling of the 31475 cm^{-1} exciton in naphthalene to the photon field is demonstrated to dictate the second-order nonlinear behavior of naphthalene crystals at frequencies near half-resonance. The dynamics of polaritons produced coherently via nonlinear interactions which are dependent on phase matching is shown to deviate in a controllable way from the dynamics of the one-photon polaritons produced in a linear experiment. The nature of the excitation remains principally that of an exciton.

40920 (UCRL—53636) **Crystal class and the electrooptic effect.** Eimerl, D. (Lawrence Livermore National Lab., CA (USA)). May 1985. Contract W-7405-ENG-48. 22p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015240.

The propagation of light in linear electrooptic media is reviewed with emphasis on understanding the full effect of crystal symmetry. The changes in the refractive indexes and the rotation of the optic axes are calculated in detail for each of the 18 biaxial and

uniaxial crystal classes. The direction of the applied field and the ray propagation are unrestricted. Under these circumstances, there is no apparent reason to prefer crystals from any particular class. However, in applications requiring large-aperture electrooptic devices, there is an advantage to applying the field parallel to the ray direction. Then the most attractive crystal classes are m, mm2, 4, 4mm, 4, 42m, 23, 43m, 6, and 6mm. These crystal classes allow propagation along an optic axis, generate birefringence with the applied field parallel to the optic axis and ray direction, and are incapable of rotating the index ellipsoid. Materials from these classes will provide robust electrooptic switches at large aperture.

40921 **Viscosity and steady shocks.** Moss, W.C. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Applied Physics Letters;* **47**: No. 4, 372-373(15 Aug 1985). Contract W-7405-ENG-48.

The dependence of the strain rate on the Hugoniot stress and the effective viscosity is derived for steady wave propagation, by considering the balance between viscous and driving forces in the steady wave. The strain rate in elastic-plastic solids is shown to vary as the fourth power of the Hugoniot stress, which is in agreement with experimental data.

40922 **Collective multipole excitations in small metal particles: Critical angular momentum l/sup cr/ for the existence of collective surface modes.** Ekardt, W. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831 and Fritz-Haber-Institut der Max-Planck-Gesellschaft, Faradayweg 4-6, D-1000 Berlin West 33, West Germany). *Physical Review* [*Section*] *B: Condensed Matter;* **32**: No. 4, 1961-1970(15 Aug 1985).

The electronic multipole response properties of small metal particles are investigated within the frame of a self-consistent spherical jellium model. The method used is the time-dependent local-density approximation (TDLDA), which was used before in a study of the dipole response [W. Ekardt, Phys. Rev. Lett. 52, 1925 (1984)]. On comparing the TDLDA response with the response of a system of noninteracting electrons, we see clearly how the electron-electron interaction is switched off rather suddenly around a critical angular momentum l/sup cr/. It is shown that the value of l/sup cr/ can be obtained from the equation q/sup cr/ = l/sup cr//R, where R is the radius of the jellium background and q/sup cr/ is the critical wave vector of the planar jellium surface. This result is consistent with a result found earlier for l = 1 [W. Ekardt, Phys. Rev. B 31, 6360 (1985)]: A spherical surface behaves across the jellium edge like a patch of a planar jellium surface.

40923 **Total-energy differences and eigenvalue sums.** Weinert, M.; Watson, R.E.; Davenport, J.W. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *B: Condensed Matter;* **32**: No. 4, 2115-2119(15 Aug 1985). Contract AC02-76CH00016.

We derive a variational expression for the total-energy difference between two crystal structures in terms of the difference in the sum of the one-electron eigenvalues and additional exchange-correlation and Coulomb contributions. These terms can be made to vanish under certain approximations, but for compound formation and for changes in volume, these terms can be of significance. Our derivation clearly shows that it is the same density, not the same potential as is commonly asserted, that is used in calculating the eigenvalue sums of the two structures; this formal distinction is of importance in order to maintain the variational nature of the results. Our results provide a framework in which many commonly used expressions can be justified and generalized.

40924 **Low-temperature Peltier heat of an itinerant electron in a ferromagnetic semiconductor.** Liu, N.H.; Emin, D. (Department of Physics, University of California at Riverside, Riverside, California 92521). *Physical Review* [*Section*] *B: Condensed Matter;* **32**: No. 4, 2285-2290(15 Aug 1985).

The Peltier heat of a wide-band itinerant carrier in a ferromagnetic semiconductor has been calculated for temperatures below the Curie temperature. In this regime we treat the spin fluctuations within the spin-wave approximation. The coupling of the charge carrier to the local moments is via local intra-atomic (e.g., s-f or s-d) exchange. Taking the strength of the intra-atomic exchange interaction to be small compared with the carrier's electronic bandwidth, we treat the interaction between the carrier and the local moments perturbatively through second order. We use the perturbed energy to compute the free energy of the coupled electron-magnon system. From the carrier-induced change of the system's free energy we directly obtain the carrier's Peltier heat. The Peltier heat contains two terms of opposite sign which both increase in magnitude with increasing temperature. These two terms arise from the first- and second-order contributions to the energy of the coupled system. Except at very low temperatures, the first-order contribution dominates. Then the electron-magnon interaction provides a negative contribution to the Peltier heat of a ferromagnetic semiconductor. The magnitude of this contribution varies as T/sup 3/2/.

40925 **Theory of elastic wave scattering: Applications of the method of optimal truncation.** Opsal, J.L.; Visscher, W.M. (Therma-Wave, Inc., 47734 Westinghouse Drive, Fremont, California 94539). *Journal of Applied Physics;* **58**: No. 3, 1102-1115(1 Aug 1985).

The method of optimal truncation is developed and applied to a variety of rotationally symmetric defects in elastic materials. Results are presented for oblate and prolate spheroidal voids, cracks, irregularly shaped voids, and compound inclusions. Most of the examples are in the frequency domain, but samples of time-domain calculations are included. Physical interpretations of some features of the calculated amplitudes are given. Checks on accuracy of the results are emphasized and implemented.

40926 **Geometric statistics and dynamic fragmentation.** Grady, D.E.; Kipp, M.E. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Applied Physics;* **58**: No. 3, 1210-1222(1 Aug 1985).

The present study is focused on the distributions in particle size produced in dynamic fragmentation processes. Previous work on this subject is reviewed. We then examine the one-dimensional fragmentation problem as a random Poisson process and provide comparisons with expanding ring fragmentation data. Next we explore the two-dimensional (area) and, less extensively, the three-dimensional (volume) fragmentation problem. Mott's theory of random area fragmentation is developed, and we propose an alternative application of Poisson statistics which leads to an exponential distribution in fragment size. Both theoretical distributions are compared with analytic and computer studies of random area geometric fragmentation problems, including those suggested by Mott, the Voronoi construction, a variation of the Johnson—Mehl construction, and several methods of our own. We find that size distributions from random geometric fragmentation are construction dependent, and that a conclusive choice between the two distributions cannot be made. A tentative application of the maximum entropy principle to fragmentation is discussed. The statistical theory is extended to include a concept of statistical heterogeneity in the fragmentation process. Finally, comparisons are made with various, dynamic fragmentation data.

40927 **Low-temperature phase of a stacked triangular Ising antiferromagnet.** Coppersmith, S.N. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *B: Condensed Matter;* **32**: No. 3, 1584-1594(1 Aug 1985). Contract AC02-76CH00016.

We have investigated a model consisting of planes of Ising spins withantiferromagnetic nearest-neighbor interactions on a triangular lattice connected by nearest-neighbor ferromagnetic bonds in the third direction. It is shown that Landau theory, mean-field theory, and conventional low-temperature expansions are not reliable for this model. We have also studied a class of one-dimensional frustrated Ising models which have low-temperature expansions with irrational coefficients, indicating that the usual method of counting excitations about ground-state configurations cannot be used to construct their low-temperature series. The results from the one-dimensional models are used to obtain bounds on the free energy and information about the magnetization of the three-dimensional model at low temperatures.

40928 **Nonlinear excitations on a quantum ferromagnetic chain.** Balakrishnan, R.; Bishop, A.R. (Department of Theoretical Physics, University of Madras, Guindy Campus, Madras 600025, India). *Physical Review Letters;* **55**: No. 5, 537-540(29 Jul 1985).

We use a spin-coherent representation to derive the spectrum of nonlinear excitations in a spin-S quantum ferromagnetic Heisenberg chain in the continuum limit. Quantum effects split the semiclassical spectrum into two branches: a lower branch of spin-wave-like, large-width solitary waves with negligible quantum corrections for all S, and an upper branch of particlelike, small-width solitary waves subject to significant quantum corrections for low S. The stability of these excitations is briefly discussed.

40929 **Molecular dynamics studies of superionic conductors.** Rahman, A.; Vashishta, P. (Argonne National Lab., IL). pp 93-142 of Physics of superionic conductors and electrode materials. Perram, J.W. (ed.). New York, NY; Plenum Publishing Corporation (1983).

Structural and dynamical properties of superionic conductors AgI and CuI are studied using molecular dynamics (MD) techniques. The model of these superionic conductors is based on the use of effective pair potentials. To determine the constants in these potentials, cohesive energy and bulk modulus are used as input: in addition one uses notions of ionic size based on the known crystal structure. Salient features of the MD technique are outlined. Methods of treating long range Coulomb forces are discussed in detail. This includes the manner of doing Ewald sum for MD cells of arbitrary shape. Features that can be incorporated to expedite the MD calculations are also discussed. A novel MD technique which allows for a dynamically controlled variation of the shape and size of the MD cell is described briefly. The development of this novel technique has made it possible to study structural phase transitions in superionic conductors. 68 references, 17 figures, 2 tables.

40930 **(BNL—36647) Neutron scattering studies of the heavy Fermion superconductors.** Goldman, A.I. (Brookhaven National Lab., Upton, NY (USA)). 1985. Contract AC02-76CH00016. 14p. (CONF-8505138—13). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014829.

From Materials and mechanisms of superconductivity conference; Ames, IA, USA (29 May 1985).

Recent neutron scattering measurements of the heavy Fermion superconductors are described. Those materials offer an exciting opportunity for neutron scattering since the f-electrons, which couple directly to magnetic scattering measurements, seem to be the same electrons which form the superconducting state below T/ sub c/. In addition, studies of the magnetic fluctuations in these, and other heavy Fermion systems, by inelastic magnetic neutron scattering can provide information about the nature of the low temperature Fermi liquid character of these novel compounds.

40931 **(IS-M—553) Josephson effect in the unusual superconductors $Lu_2Fe_3Si_5$, $LiTi_2O_4$, and UBe_{13}.** Wolf, E.L.; Noer, R.J.; Han, S.; Ng, K.W.; Chen, T.P.; Finnemore, D.K.; Tanner, L. (Ames Lab., IA (USA)). 1985. Contract W-7405-ENG-82. 12p. (CONF-8505138—14). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015260.

From Materials and mechanisms of superconductivity conference; Ames, IA, USA (29 May 1985).

A Josephson supercurrent, which can be split by microwave photons of frequency nu into Shapiro steps of spacing $\Delta V = hnu/2e$, is expected between superconductors of like pairing type, either s or p-wave. A weaker, and possibly unobservable effect, with step spacing $\Delta V/2$ was predicted by Pals and van Haeringen between electrodes of unlike pairing type. Experiments using K-band microwaves and a Nb point contact have been carried out at 1.2 K on the d-band superconductors $LiTi_2O_4$ and $Lu_3Fe_5Si_5$. In both cases we find unambiguous indication of s-wave pairing, as in Nb. The same experiment on the heavy-fermion superconductor UBe_{13} in the range 0.7 K to 7 K also reveals steps of spacing ΔV. This indicates that UBe_{13} has been induced into a state of s-wave superconductivity by proximity with the s-wave superconductor Nb.

40932 **(CEA-N—2406, pp 162-167) Damped harmonic oscillator model, revisited.** Brancus, I.; Dorobantu, I.A.; Brancus, D.E.N. 1984. NTIS (US Sales Only), PC A09/MF A01. File Number DE85751948. (CONF-8405179—).

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Different alternatives of the damped harmonic oscillator model, widely used in many domains of physics have in common the same schematic way of dealing with the reservoir characterized by infinite bandwidth, infinite lifetimes of the elementary excitations and a flat density of states close to the relevant oscillator frequency. This paper treats more realistically the reservoir, by giving up the above restrictions and considering, in a non-Markoffian frame, their effects on the evolution of the oscillator states.

40933 **(CTOM—49097) Problem of uniqueness of equilibrium stationary general relativistic fields.** Savage, J.R. (Alberta Univ., Edmonton (Canada). Dept. of Physics). 1980. 165p. Canadian Theses on Microfiche Service, National Library of Canada, Ottawa, Canada K1A 0N4.

Thesis (Ph.D.).

That a self-gravitating equilibrium perfect fluid in empty space has a spherical configuration if it is nonrotating or has a unique configuration characterized by some physical parameters if it is slowly rotating is considered physically evident but has not been rigorously derived from Einstein's field equations together with suitably asymptotic conditions. The author considers the equations for a general relativistic stationary spacetime which is asymptotically flat and consists of an exterior vacuum solution and an interior perfect fluid in rigid motion with a given equation of state, total mass and surface temperature. Global analysis techniques are used to show that there is no family of such static spacetimes which depends differentiably on a parameter and contains the spherically symmetric solution except for families containing only solutions diffeomorphic to the spherically symmetric one. In the general stationary (rotating) case, if we require that the solutions be close to the static spherically symmetric ones we can show that there is at most a one-dimensional differentiable family of global axially symmetric solutions parameterized by the value of the angular momentum except for those obtained by coordinate transformation.

40934 **(IFVE-OTF—84-29) Algebra of asymptotic Poincare group generators in general relativity.** Solov'ev, V.O. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701722.

A criterion for realization of the Poincare group at spatial infinity, which is invariant in the choice of the coordinate system on hypersurfaces, is found in GR Hamiltonian formalism. We propose to use this criterion for a new definition of the asymptotic flatness of the initial data and the space-time. The background flat metric on hypersurfaces and the Poincare group, which conserves this metric, are defined ambigously. However, the numerical values of the generators are independent of the freedom of this choice on constraint solutions. In the case of an asymptotically Galilean metric, a refinement for the widely used boundary conditions has been obtained. A recipe for the use of the Arnowitt-Deser-Misner decomposition, with the slowly decreasing contribution from the space and time coordinate transformations, is given. 14 references.

40935 **(IFVE-OTF—84-38) Invariant for radiation transition in the Coulomb field.** Alliluev, S.P.; Gershtejn, S.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701719.

There has been found an invariant for a classical particle motion in the Coulomb field for the case, when radiation friction is present. 1 reference.

40936 **(IFVE-OTF—84-86) Dependent coordinates in classical mechanics.** Razumov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1984. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701720.

A method for using dependent coordinates in classical mechanics based on the idea of pseudoinverse matrix is suggested. The idea of pseudoinverse matrix is discussed, and its existence is proved. 6 references.

40937 **(JINR—R-5-84-541) Covariant Bogolyubov transformation and quantum excitation of real solitons.** Meshcheryakov, D.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701721.

Quantization of the solutions of nonlinear classical equations with real soliton solutions is investigated. Nonlinear complex scalar field in two-dimensional space-time is considered. The quantization is performed in the vicinity of classical solution. To account the Poincare invariance, the covariant Bogolubov transformation is used. Operators of secondary quantization satisfy the linkages imposed on state vectors. It is shown that quantum excitations of neutral classical solution in nonlinear models do not possess conservation values additional in relation to classical solutions. Quantum field in nonlinear model cannot have a higher symmetry type than that one of the classical solution. 9 references.

40938 **(JINR—R-18-84-403) Role of gravitation in the existence of an electric charge and its magnetic moment. Dynamics.** Zorin, G.N. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1984. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701723.

In order to clarify the role of gravitation in forming a microcosmos and as a result of generalization of the principle of intertia relativity a three-dimensional space-time is obtained which posseses groups of isometries including Lorentz transformations. Such space-time contains a new dimension which size, as established, unlike the dimensions of two other dimensions-length and time-, is radian. It is established that conservation of forces of gravitational effect of Metagalaxy upon a material point (mp) at its motion during the shortest time is responsible for relativistic scaling change. It is substantiated that without introducing a new concept energy moment of mp it is impossible to establish a physical content both of electric and gravitational charges. It is proved that the existence itself of electric charge and of its magnetic moment is caused by gravitational influence of Metagalaxy on mp. It is discovered that the gravitational interaction of mp with Metagalaxy is an independent interaction which neglect, as clarified, causes the divergence by an order of values of Galaxy clusters masses determined by the Newton law of gravitation and by galaxies luminosity. Using of the formulated mechanics for a number of physical phenomena considered in quantum electrodynamics is discussed. 11 references.

40939 **(LA—10404-MS) Plane-wave theory of electrical transport in disordered systems.** Rinker, G. (Los Alamos National Lab., NM (USA)). May 1985. Contract W-7405-ENG-36. 20p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015353.

This is the third in a series of reports concerning the electrical and thermal transport properties of dense plasma. In the present work we construct a plane-wave theory that approximates, with moderate success, our previous partial-wave calculations of electrical and thermal transport coefficients. Regions of validity are indicated. Comparisons are made with experimental measurements of source libraries that contain the transport coefficients calculated by the present method for all elements from $Z = 1$ to $Z = 96$.

40940 **(OUP—83-03) Quantum-like methods of solution for classical dynamical equations.** Kolsrud, M. (Oslo Univ. (Norway). Fysisk Inst.). Jan 1983. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701692.

The general solution of Hamilton's equation is obtained from the unperturbed solution through a series expansion in terms of the interaction Hamiltonian. An equivalent classical transformation operator in phase space is established. The method is applied to particles and/or fields. Poissons brackets for the free dynamical variables are evaluated. The quantized version is formally similar to these classical results. It is thus obtained directly, giving the time dependent Heisenberg-variables, and also the unitary transformation operators, in particular for the case of QED. Some consequences of the use of +- commutators are discussed.

40941 **(UCRL—92255) Dislocation kinetics behind shear shocks.** Stout, R.B.; Anderson, G.D. (Lawrence Livermore National Lab., CA (USA)). Jun 1985. Contract W-7405-ENG-48. 6p. (CONF-850736—24). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014811.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

High velocity oblique impact experiments result in both compression and shear shock waves. Behind the shear shock wave the particle velocity is transverse to the shock front. At large transverse particle velocities, dislocation kinetics can contribute a portion of the velocity. Based on a kinematic and thermodynamic model of dislocation kinetics, an analysis is made of the transverse strain and velocity behind a shear shock. Kinematics of dislocations in transverse motion behind the shock is formulated. A solution is given for an ideal case where the dislocation density function propagates as a pulse behind the shear shock. 9 refs.

40942 **(USIP—84-03) Three lectures on supersymmetry and supergravity.** Lindstroem, U. (Stockholm Univ. (Sweden). Inst. of Physics). Mar 1984. 41p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701693.

Supersymmetry is introduced through a simple worked example. Supersymmetric theories are then reviewed with particular emphasis on supergravity.

40943 **Comment on the consistency of truncated nonlinear integral equation based theories of freezing.** Cerjan, C.; Bagchi, B.; Rice, S.A. (Lawrence Livermore Laboratory, University of California, Livermore, California 94550). *Journal of Chemical Physics;* **83**: No. 5, 2376-2383(1 Sep 1985).

We report the results of two studies of aspects of the consistency of truncated nonlinear integral equation based theories of freezing: (i) We show that the self-consistent solutions to these nonlinear equations are unfortunately sensitive to the level of truncation. For the hard sphere system, if the Wertheim—Thiele representation of the pair direct correlation function is used, the inclusion of part but not all of the triplet direct correlation function contribution, as has been common, worsens the predictions considerably. We also show that the convergence of the solutions found, with respect to number of reciprocal lattice vectors kept in the Fourier expansion of the crystal singlet density, is slow. These conclusions imply great sensitivity to the quality of the pair direct correlation function employed in the theory. (ii) We show the direct correlation function based and the pair correlation function based theories of freezing can be cast into a form which requires solution of isomorphous nonlinear integral equations. However, in the pair correlation function theory the usual neglect of the influence of inhomogeneity of the density distribution on the pair correlation function is shown to be inconsistent to the lowest order in the change of density on freezing, and to lead to erroneous predictions.

40944 **Quantum relativistic oscillator. II. Nonrelativistic limit and phenomenological justification.** Bohm, A.; Loewe, M.E.; Magnollay, P. (Center for Particle Theory, The University of Texas at Austin, Austin, Texas 78712). *Physical Review* [*Section*] *D: Particles and Fields;* **32**: No. 3, 791-799(1 Aug 1985).

It is shown that the quantum relativistic oscillator with noncommuting internal momentum and position has as its nonrelativistic contraction limit the usual three-dimensional oscillator. The nonrelativistic limits for representations with integer and half-integer spin are compared with the quark-model picture. The spectrum pre-

dicted by the quantum relativistic oscillator with rotations is compared with experimental hadron spectra.

40945 **Circuit effect in $LiNbO_3$ channel-waveguide modulators.** Becker, R.A. (Lincoln Laboratory, Massachusetts Institute of Technology, Lexington, Massachusetts 02173-0073). *Optics Letters;* **10**: No. 8, 417-419(Aug 1985).

An RC circuit is used to model transient effects that occur when dc or quasi-dc voltages are applied to channel-waveguide modulators. These effects are believed to be due to the anisotropic redistribution over time of charge stored in the $LiNbO_3$. The anisotropy arises from the anisotropic material properties and the inhomogeneity induced when channel waveguides are formed. The transient effects measured are not caused by photorefractivity.

40946 **Sensitive dependence on parameters in nonlinear dynamics.** Farmer, J.D. (Center for Nonlinear Studies, MS B258, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 4, 351-354(22 Jul 1985).

Two qualitatively different types of dynamical behavior can be so tightly interwoven that it becomes impossible predict when a small change in parameters will cause a change in qualitative properties. For quadratic mappings of the interval, for example, the chaotic to parameter values form a Cantor set of positive measure, broken up by periodic intervals. This set can be described by a global scaling law, which makes it possible to form a good estimate of the fraction of chaotic parameter values. Sensitive dependence on parameters occurs when the scaling exponent $\beta < 1$. β is conjectured to display universal behavior.

40947 **Approximation scheme for the quantum Liouville equation using phase-space distribution functions.** Ploszajczak, M.; Rhoades-Brown, M.J. (Niels Bohr Institute, Blegdamsvej 17 DK-2100 Copenhagen O, Denmark and Physics Department, State University of New York at Stony Brook, Stony Brook, New York 11794). *Physical Review Letters;* **55**: No. 2, 147-149(8 Jul 1985). Contract AC02-76ER13001.

A general approximation scheme for solving the quantum Liouville equation has been developed and is presented here specifically within the Hartree approximation. This method uses the connection between the density matrix and the Wigner phase-space representations. By use of the Wigner representation the off-diagonal elements of the density matrix are expanded in powers of deviations from the mean momentum value. The time evolution of these deviations is governed by a closed self-consistent set of equations.

40948 **Fourier path-integral Monte Carlo methods: Partial averaging.** Doll, J.D.; Coalson, R.D.; Freeman, D.L. (Chemistry Division, Mail Stop G-738, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **55**: No. 1, 1-4(1 Jul 1985).

Monte Carlo Fourier path-integral techniques are explored. It is shown that fluctuation renormalization techniques provide an effective means for treating the effects of high-order Fourier contributions. The resulting formalism is rapidly convergent, is computationally convenient, and has potentially useful variational aspects.

40949 **Macroscopic global modeling of binary alloy solidification processes.** Alexiades, V.; Wilson, D.G.; Solomon, A.D. (Oak Ridge National Laboratory). *Quarterly of Applied Mathematics;* **43**: No. 2, 143-158(Jul 1985). Contract W-7405-ENG-26.

A macroscopic mathematical model is constructed describing the evolution of the phases of a binary alloy or mixture undergoing solidification under the action of simultaneous conduction of heat and diffusion of solute. The formulation is global, in the form of a pair of conservation laws valid over the whole region occupied by the alloy in a weak (distributional) sense. Thus it is especially convenient for numerical solution since it does not require tracking of the interface, which, in fact, may develop into a "mushy zone".

40950 **Mode-locking and the transition to chaos in dissipative systems.** Bak, P.; Bohr, T.; Jensen, M.H. (Brookhaven National Lab., Upton, NY). *Physica Scripta;* **T9**: 50-58(1985). (CONF-8406186—). Contract AC02-76CH00016.

From 59. Nobel symposium - the physics of chaos and related phenomena; Graeftavallen, Sweden (11 Jun 1984).

The transition to chaos by the interaction and overlap of mode-locked resonances in dissipative systems with two competing frequencies is investigated theoretically by analyzing discrete circle maps, the differential equations representing real physical systems such as resistively shunted Josephson junctions and charge-density waves in RF fields), and two-dimensional discrete dissipative maps. The mode-locked intervals are found to trace a complete Devil's Staircase at the critical line where the map becomes noninvertable, and the complementary set of the Staircase is shown to be a Cantor set of universal fractal dimension 0.87. The equation for a damped driven pendulum is considered as an analogy to the Josephson and charge-density-wave cases, and it is inferred that the critical behavior of these systems is the same, permitting the experimental testing of theoretical predictions based on circle maps. Some published experimental data supporting the present predictions are surveyed. 29 references.

40951 **(ANL/MCS-TM—51) Some remarks on inverses of sparse matrices.** Duff, I.S.; Erisman, A.M.; Gear, C.W.; Reid, J.K. (Argonne National Lab., IL (USA)). Apr 1985. Contract W-31-109-ENG-38;AC02-76ER02383. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015509.

We discuss some properties of the structure of the inverse of a sparse matrix. In particular, we show that the structural inverse of an irreducible sparse matrix is always full. We first show that Gaussian elimination always yields a full structural inverse and then show the result directly. We believe that our lemmas concerning Gaussian elimination are of interest in their own right.

40952 **(DOE/ER/03992—569) Representations of the group of diffeomorphisms in the physics of particles, gravity and fluids.** Ne'eman, Y. (Texas Univ., Austin (USA). Center for Particle Theory; Ministry of Science and Development, Jerusalem (Israel)). Oct 1984. Contract AS05-76ER03992. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85007031.

The group of space-time diffeomorphisms is defined. The discovery of its double-covering group is reviewed and its representations are mentioned. Applications in several domains of physics are discussed.

40953 **(EUR-CEA-FC—1241) Asymptotic expansions of solutions of an nth order linear differential equation with power coefficients.** Paris, R.B.; Wood, A.D. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Nov 1984. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751995.

The asymptotic expansions of solutions of a class of linear ordinary differential equations of arbitrary order n, containing a factor zsup(m) multiplying the lower order derivatives, are investigated for large values of z in the complex plane. Four classes of solutions are considered which exhibit the following behaviour as $|z| \to \infty$ in certain sectors: (i) solutions whose behaviour is either exponentially large or algebraic (involving $p\ (< n)$ algebraic expansions), (ii) solutions which are exponentially small (iii) solutions with a single algebraic expansion and (iv) solutions which are even and odd functions of z whenever $n+m$ is even. The asymptotic expansions of these solutions in a full neigbourhood of the point at infinity are obtained by means of the theory of the solutions in the case $m=0$ developed in a previous paper.

40954 **(LA-DC—9486) Approximately Lorentz transformations and p-adic fields.** Beyer, W.A. (Los Alamos National Lab., NM (USA)). 12 Mar 1968. Contract W-7405-ENG-36. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015053.

Hyers and Ulam have discussed an ϵ-linear transformation f of a Banach space E over a real or complex field into itself $f(x + y) - f(x) - f(y) < \epsilon$ for all x and y in E, (fixed ϵ) and shown there exists uniquely a strictly linear transformation l: $E \rightarrow E$ for which $l(x) - f(x) < \epsilon$ for all x in E. Everett and Ulam have discussed Lorentz transformations in a produce space K/sup n+1/, where K is a non-Archimedean valued field. The purpose of this note is to extend the Hyers-Ulam theory to Banach spaces over p-adic number fields and to discuss analogous theorems for Lorentz transformations in both the real and p-adic cases. 4 refs.

40955 **Renormalization, unstable manifolds, and the fractal structure of mode locking.** Cvitanovic, P.; Jensen, M.H.; Kadanoff, L.P.; Procaccia, I. (Laboratory of Atomic and Solid State Physics, Cornell University, Ithaca, New York, 14853). *Physical Review Letters;* **55**: No. 4, 343-346(22 Jul 1985). Contract AC02-83ER13044.

The apparent universality of the fractal dimension of the set of quasiperiodic windings at the onset of chaos in a wide class of circle maps is described by construction of a universal one-parameter family of maps which lies along the unstable manifold of the renormalization group. The manifold generates a universal "devil's staircase" whose dimension agrees with direct numerical calculations. Applications to experiments are discussed.

40956 **Accuracy conditions for the numerical computation of waves.** Bayliss, A.; Goldstein, C.I.; Turkel, E. (Exxon Corporate Research, Annandale, New Jersey 08801). *Journal of Computational Physics;* **59**: No. 3, 396-404(Jul 1985). Contract AC02-76CH00016.

The Helmholtz equation $(\Delta + K^2n^2)u = f$ with a variable index of refraction n and a suitable radiation condition at infinity serves as a model for a wide variety of wave propagation problems. Such problems can be solved numerically by first truncating the given unbounded domain, imposing a suitable outgoing radiation condition on an artificial boundary and then solving the resulting problem on the bounded domain by direct discretization (for example, using a finite element method). In practical applications, the mesh size h and the wave number K are not independent but are constrained by the accuracy of the desired computation. It will be shown that the number of points per wavelength, measured by $(Kh)^{-1}$, is not sufficient to determine the accuracy of a given discretization. For example, the quantity K^3h^2 is shown to determine the accuracy in the L^2 norm for a second-order discretization method applied to several propagation models.

40957 **Construction of the Voronoi mesh on a sphere.** Augenbaum, J.M.; Peskin, C.S. (NASA-Goddard Space Flight Center, Code 611, Greenbelt, Maryland 20771). *Journal of Computational Physics;* **59**: No. 1, 177-192(Jun 1985). Contract AC02-76ER03077.

A new construction of the Voronoi mesh on the sphere is presented. The main feature is that the algorithm adds points one at a time until the final Voronoi mesh is built up. By adding one point to an existing Voronoi mesh of K points, only local changes are needed to construct a Voronoi mesh of K+1 points. This construction is particularly well suited to time-dependent problems since using information from the Voronoi mesh at the previous time step allows us to reduce the construction to O(N) operations when the two configurations are close, while the algorithm does not break down when they are far apart. Numerical experiments are presented to substantiate the O(N) operation count for a "typical" case.

40958 **Conservative rezoning algorithm for generalized two-dimensional meshes.** Ramshaw, J.D. (Theoretical Division, University of California, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Computational Physics;* **59**: No. 1, 193-199(Jun 1985).

A method is presented for transferring a conserved quantity Q from one generalized mesh to another when the volumetric density of Q is uniform within each cell of the original mesh.

40959 **(CLM-R—246) Structure of the magnetic equilibrium in the HBTX1A reversed field pinch.** Brotherton-Ratcliffe, D.; Hutchinson, I.H. (UKAEA Culham Lab., Abingdon). Aug 1984. 23p. HMSO, London, price Pound 5.00.

The structure of the magnetic equilibrium in the Reversed Field Pinch HBTX1A has been measured using a magnetic probe inserted into the plasma. Variation of the measured flux-surface displacement with radius is consistent with that predicted by toroidal equilibrium theory. Profiles of the safety factor indicate that there is no pitch minimum. Pressure distributions are deduced which appear peaked on axis and are consistent with the measured values of the density and conductivity temperature. Values of β/sub Θ/ approx.= 14% and $<\beta>$ approx.= 5% are found, leading to an estimation of the energy confinement time of tau/sub E/ approx.= 70 μs. Electric field profiles are presented from which a profile of effective parallel conductivity is calculated.

40960 **(DOE/ER/53105—T2) Research and development of an aimed magnetic lead current density-magnetic field diagnostic. Final report.** (AMAF Industries, Inc., Columbia, MD (USA)). [1985]. Contract AC01-80ER53105. 76p. NTIS, PC A05. File Number DE85014720.

A diagnostics survey was made to provide a clear definition of advanced diagnostic needs and the limitations of current approaches in addressing those needs. Special attention was given to the adequacy with which current diagnostics are interfaced to signal processing/data acquisition devices and systems. Critical evaluations of selected alternative diagnostic techniques for future R and D activities are presented. The conceptual basis of the Aimed Magnetic Lead Gradiometric system as a current density/magnetic field diagnostic is established.

40961 **(DOE/ET—53088-194) Plasma kinetic theory in action-angle variables.** Mahajan, S.M.; Chen, C.Y. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jun 1985. Contract FG05-80ET53088. 23p. (IFSR—194). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014767.

An appropriate canonical perturbation theory to correctly deal with general electromagnetic field perturbation is developed, and is used to set up plasma kinetic theory in action-angle variables. A variety of test problems are solved to show the unifying power of the method. Basic linear, quasilinear, and nonlinear equations are derived which can serve as the starting point for a whole range of plasma problems.

40962 **(DOE/ET/51013—140) Experimental studies of thermal and non-thermal electron cyclotron phenomena in tokamaks.** McDermott, F.S. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Dec 1984. Contract AC02-78ET51013. 395p. (PFC/RR—84-20). NTIS, PC A17/MF A01; GPO Dep. File Number DE85013650.

Thesis.

A direct measurement of wave absorption in the ISX-B tokamak at the second harmonic of the electron cyclotron frequency is reported. Measurements of the absorption of a wave polarized in the extraordinary mode and propagating perpendicular to the toroidal magnetic field are in agreement with the absorption predicted by the linearized Vlasov equation for a thermal plasma. Agreement is found both for an analytic approximation to the wave absorption and for a numerical simulation of ray propagation in toroidal geometry. Observations are also reported on a non-linear, three-wave interaction process occurring during high power electron cyclotron

resonance heating in the Versator II tokamak. The measured spectra and the threshold power are consistent with a model in which the incident power in the extraordinary mode of polarization decays at the upper hybrid resonance layer into a lower hybrid wave and an electron Bernstein wave. Finally, measurements of non-thermal emission at the second harmonic of the electron cyclotron frequency and below the electron plasma frequency are reported from low density, non-Maxwellian plasma in the Versator II tokamak. The emission spectra are in agreement with a model in which waves are driven unstable at the anomalous Doppler resonance, while only weakly damped at the Cerenkov resonance.

40963 (DOE/ET/51013—148) MHD stabilization of high β mirror plasma partially enclosed by conducting wall. Li, X.Z.; Kesner, J.; Lane, B. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Apr 1985. Contract AC02-78ET51013. 23p. (PFC/CP—85-2; CONF-850474—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015579.

From Sherwood theory conference; Madison, WI, USA (15 Apr 1985).

An MHD formulation is used to study a wall stabilized high β mirror plasma with isotropic pressure. The stabilizing wall extends axially only a part of the distance between the mirror midplane and throat. We model this arrangement using a wall that approaches the plasma surface in the bad curvature region and is distant from the plasma in the good curvature region. A variational method is used to solve the equation in the distant wall region and an iterative method is used to solve the equation when the wall is close to the plasma. A jump condition is used to connect the regions of close and distant plasma-wall proximity. A simple trial function is used to perform the variational calculation (the choice of trial function is substantiated by an exact numerical solution). The results show that for a low mirror ratio case more conducting wall surface is needed for stability than in the high mirror ratio case. This agrees with the physical mechanism of the wall stabilization.

40964 (DOE/ET/53088—188) Ambipolarons: solitary wave solutions for the radial electric field in a plasma. Hastings, D.E.; Hazeltine, R.D.; Morrison, P.J. (Oak Ridge National Lab., TN (USA); Texas Univ., Austin (USA). Inst. for Fusion Studies). Jun 1985. Contract FG05-80ET53088. 21p. (IFSR—188). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014764.

The ambipolar radial electric field in a nonaxisymmetric plasma can be described by a nonlinear diffusion equation. This equation is shown to possess solitary wave solutions. A model nonlinear diffusion equation with a cubic nonlinearity is studied. An explicit analytic step-like form for the solitary wave is found. It is shown that the solitary wave solutions are linearly stable against all but translational perturbations. Collisions of these solitary waves are studied and three possible final states are found: two diverging solitary waves, two stationary solitary waves or two converging solitary waves leading to annihilation.

40965 (EUR-CEA-FC—1229) Theoretical and experimental study of Gaussian beam and mode propagation in over-dimensioned circular guides. Crenn, J.P. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee; Paris-6 Univ., 75 (France)). Jun 1984. 209p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE85751932.

A theoretical study of modes in circular hollow over-dimensioned waveguides is developed; it shows the interest of dielectric or weakly conducting wall guide use. An optical model computing the transmitted power of gaussian beams through these guides, for different types of walls, is established. The formulas obtained allow to optimize the guide and to adapt the beam. Applied to the EH_{11} mode this optical model leads to new results. Systematical measurements of gaussian beam propagation in over-dimensioned guides are realised; they are concerned with beam power transmission, polarization, its structure and its radiation at the guide exit in function of the different characteristics of the beam and the guide.

40966 (IAE—3775/6) Study on vacuum magnetic configurations in a six-period geodesic screw tore. Glagolev, V.M.; Dobryakov, A.V.; Trubnikov, B.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 36p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701757.

A method for calculation of vacuum magnetic fields, surfaces, pit and shear based on numerical determination of coefficients in analytical formulae approximating the field of the system of discrete conductors with current is suggested for an arbitrary closed trap. The method is exemplified by a geodesic screw tore. Besides, an optimum variant of the system of stabilizing windings ensuring plasma stability by the Mersje criterion at the maximum equilibrium pressure is disclosed for configuration with screw symmetry. 8 references, 9 figures, 3 tables.

40967 (IAE—3779/6) Model of impurity diffusion in tokamaks. Dnestrovskij, Yu.N.; Strizhov, V.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 31p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701758.

Some aspects of simulation of impurity behaviour in tokamaks are considered. The diffusion model comprises both neaclassical and anomalous flows. A numerical algorithm for solving the problem is described. Some results of calculations of impurity diffusion and radiation in the installation T-10 are presented. 40 references, 5 figures, 1 table.

40968 (IAE—3793/6) Turbulent relaxation of directional energy of supersonic plasma flows in a longitudinal magnetic field. Alipchenkov, V.M.; Konkashbaev, I.K.; Lopatko, V.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701759.

Collisionless relaxation of directional energy of supersonic plasma magnetized flows in a longitudinal magnetic field is considered in the paper. Moderation of supersonic plasma flows due to effective collisionless mechanism of interaction resulting from development of hose instability is numerically considered. 16 references, 10 figures.

40969 (INIS-mf—4754-No.27) International bulletin on atomic and molecular data for fusion. No. 27. Hughes, J.G. (ed.). (International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit). Dec 1984. 70p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85781266.

This bulletin deals with atomic and molecular data for fusion. A bibliography for the most recent relevent data, summarized in the document, is provided (373 literature pieces). Work in progress on the ionization by electron impact (theoretical results) is also briefly reported on.

40970 (IPPJ—644) Dissipation of magnetic energy during disruptive current termination. Yamazaki, K.; Schmidt, G.L. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Sep 1983. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701298.

The magnetic coupling during a disruption between the plasma and the various coil systems on the PDX tokamak has been modeled. Using measured coil currents, the model indicates that dissipation of magnetic energy in the plasma equal to 75% of the energy stored in the poloidal field of the plasma current does occur and that coupling between the plasma and the coil systems can reduce such dissipation. In the case of PDX ohmic discharges, bolometric measurements of radiation and charge exchange, integrated over a disruption, account for 90% of the calculated energy dissipation.

40971 **(ITEF—11(1984)) Equilibrium states of radiative Z-pinch.** Bobrova, N.A.; Razinkova, T.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 35p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85781040.

The problem on equilibrium of a cylindrically symmetric Z-pinch with account of radiation losses in deuterium-xenon mixture is considered. Radial distributions of equilibrium plasma density, plasma temperature and magnetic field intensity for various laws of radiative energy losses are obtained. In case of recombination radiation and line radiation for the given total current and plasma column radius the equilibrium plasma density has been found. In case of bremsstrahlung, the current at which equilibrium is possible, has been found.

40972 **(ITF—83-167-R) Radiation of non-uniform plasma ball.** Gvozdetskij, V.S.; Zagorodnij, A.G.; Krivtsun, I.V.; Yakimenko, I.P. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1983. 26p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE85701756.

The solution of the problem of thermal radiation is obtained for the case of non-uniform spherically-symmetric plasma system approximated by an arbitrary number of uniform spherical layers. Plasma is described within the framework of hydrodynamic model with gas kinetic pressure of electrons and dynamics of molecular sub-system. 14 references.

40973 **(LA-UR—85-225) Nondispersive x-ray diagnostics of short lived plasmas.** Day, R.H. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 50p. (CONF-8307156—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE85005964.

From NATO advanced study institute; Pascoli, Italy (1 Jul 1983).

In this NATO Advanced Study Institute, we have discussed in detail the diagnosis of many pulse power machine properties, including their electrical behavior, grounding and shielding, and related data acquisition techniques. The purpose for many of these machines is to create high temperature/high density plasmas and, therefore, the subsequent behavior of these plasmas is of critical concern. The energy density of these plasmas is such that they will naturally radiate in the x-ray regime and thus the diagnosis of their x-ray emission is a crucial measurement of the entire system performance. In this lecture, I describe the general techniques used to perform nondispersive x-ray diagnostics of these short lived plasmas.

40974 **(LA-UR—85-226) High energy x-ray diagnostics of short lived plasmas.** Day, R.H. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 15p. (CONF-8307156—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE85005963.

From NATO advanced study institute; Pascoli, Italy (1 Jul 1983).

High energy x-ray and gamma ray measurements are a common diagnostic of high temperature/high density plasmas. We will define high energy as those energies above 50 kilovolts and discuss the various techniques for returning temporal, spectral, and spatial distributions of this emission.

40975 **(ORNL/TM—9363) Theory of resistivity-gradient-driven turbulence.** Garcia, L.; Diamond, P.H.; Carreras, B.A.; Callen, J.D. (Oak Ridge National Lab., TN (USA)). Jul 1985. Contract AC05-84OR21400. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE85015068.

A theory of the nonlinear evolution and saturation of resistivity driven turbulence, which evolves from linear rippling instabilities, is presented. The nonlinear saturation mechanism is identified both analytically and numerically. Saturation occurs when the turbulent diffusion of the resistivity is large enough so that dissipation due to parallel electron thermal conduction balances the nonlinearly modified resistivity gradient driving term. The levels of potential, resistivity, and density fluctuations at saturation are calculated. A combination of computational modeling and analytic treatment is used in this investigation.

40976 **(ORNL/TM—9531) Spectral method for obtaining three-dimensional magnetohydrodynamic equilibria.** Hirshman, S.P.; Lee, D.K. (Oak Ridge National Lab., TN (USA)). Jul 1985. Contract AC05-84OR21400. 35p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015065.

A description is given of a new code, MOMCON (spectral moments with constraints), that obtains three-dimensional ideal magnetohydrodynamic (MHD) equilibria in a fixed toroidal domain using a Fourier expansion for the inverse coordinates (R,Z) representing nested magnetic surfaces. A set of nonlinear coupled ordinary differential equations for the spectral coefficients of (R,Z) is solved using an accelerated steepest descent method. A stream function λ is introduced to improve the mode convergence properties of the Fourier series for R and Z. Constraint equations relating the $m \geqq 2$ moments of R and Z are solved to define a unique poloidal angle.

40977 **(ORNL/TM—9598) Effects of trapped alpha particles on ballooning modes in tokamaks.** Spong, D.A.; Sigmar, D.J.; Cooper, W.A.; Hastings, D.E.; Tsang, K.T. (Oak Ridge National Lab., TN (USA)). Jul 1985. Contract AC05-84OR21400. 34p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015064.

The effects of a trapped, precessing alpha particle population on ballooning modes are examined for a large-aspect-ratio, shifted circular flux surface tokamak equilibrium. The alphas are modeled in the deeply trapped limit and with a Maxwellian distribution in energy. The resulting kinetic ballooning equation is solved numerically, and the dependence of the eigenvalues and stability boundaries on shear, background pressure gradient, and ratio of hot to background temperatures and densities is investigated. In the low-frequency regime ($\omega << \omega$/sub dH/ = alpha precessional drift frequency), the alpha component has a stabilizing influence, while in the intermediate-frequency range ($\omega \leqq \omega$/sub dH/) the alphas destabilize ballooning modes through interaction with the trapped particle precessional drift resonance. Parameter ranges that should be typical of alpha production in near-term tokamak devices such as the Tokamak Fusion Test Reactor (TFTR) are considered.

40978 **(OUP—84-24) Nonlinear saturation of E x B instability in a plasma slab.** Alfsen, K.H.; Holter, Oe. (Oslo Univ. (Norway). Fysisk Inst.). Sep 1984. 45p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781039.

The saturation of the E bar x B bar instability is investigated in the nonlinear regime. The governing equations are studied analytically and numerically by using a spectral method with mode truncation. The nonlinear stabilization is due to modifications of the background density- and potential profiles. In the time asymptotic limit a stationary solution, which is independent of the initial conditions is obtained. The asymptotic state is characterized by a splitting of the interacting modes into two almost non-interacting groups, where the modes with even mode number sum; i.e. the modes driven by the linearly most unstable mode, is found to dominate the system. For this group fixed point calculations are performed analytically with six interacting modes. Comparison with numerical calculations indicates excellent agreement far into the unstable region.

40979 **(OUP—84-28) Ion identification by ambipolar effusion from the positive column in a deuterium glow discharge.** Mentzoni, M. (Oslo Univ. (Norway). Fysisk Inst.). Nov 1984. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781041.

The ambipolar ion effusion through a 100 *my*m hole in the wall of a sylindrical dishcarge vessel was analysed by a quadrupole mass spectrograph. The detected ion currents revealed that D*+sb+*, D+*sb3*, and D+*sb2* were present. Using the ambipolar theory for a multi-ionic plasma and published values for ion mobilities, density ratios were found for N(D+)/N(D+*sb3*). These ranged from 1.9 at p = 0.5 Torr to 1.1 at 1.3 Torr after having gone through a maximum of 2.8 at about 0.9 Torr.

40980 **(PPPL—2137) Fast ion profiles during neutral beam and lower hybrid heating.** Heidbrink, W.W.; Strachan, J.D.; Bell, R.E.; Cavallo, A.; Motley, R.; Schilling, G.; Stevens, J.; Wilson, J.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1985. Contract AC02-76CH03073. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015308.

Profiles of the d(d,p)t fusion reaction are measured in the PLT tokamak using an array of collimated 3 MeV proton detectors. During deuterium neutral beam injection, the emission profile indicates that the beam deposition is at least as narrow as predicted by a bounce-averaged Fokker-Planck code. The fast ion tail formed by lower hybrid waves (at densities above the critical density for current drive) also peaks strongly near the magnetic axis.

40981 **(PPPL—2227) PBX experimental results in 1984.** Takahashi, H.; Bol, K.; Buchenauer, D.; Couture, P.; Fishman, H.; Fonck, R.; Grek, B.; Gammel, G.; Heidbrink, W.; Ida, K. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1985. Contract AC02-76CH03073. 42p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015309.

Experimental activities of the PBX project during its first seven months of operation are summarized.

40982 **(PPPL—2230) Parabolic approximation method for fast magnetosonic wave propagation in tokamaks.** Phillips, C.K.; Perkins, F.W.; Hwang, D.Q. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1985. Contract AC02-76CH03073. 39p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015310.

Fast magnetosonic wave propagation in a cylindrical tokamak model is studied using a parabolic approximation method in which poloidal variations of the wave field are considered weak in comparison to the radial variations. Diffraction effects, which are ignored by ray tracing mthods, are included self-consistently using the parabolic method since continuous representations for the wave electromagnetic fields are computed directly. Numerical results are presented which illustrate the cylindrical convergence of the launched waves into a diffraction-limited focal spot on the cyclotron absorption layer near the magnetic axis for a wide range of plasma confinement parameters.

40983 (PPPL—2233, pp 9-14) **Experiments on the ST Tokamak.** Stodiek, W. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

The confinement time on the ST Tokamak was proportional to the plasma current and density, and reached values of 10 to 20 ms near the disruption limit. The confinement showed the effect of neoclassical, single-particle behavior for nonaxisymmetry. The Spitzer conductivity was found considering Z/sub eff/ from measured impurities. Runaway electron production was classical, the cross-field transport anomalous. The MHD modes, internal (sawtooth) and major disruptions, and island structures for the m = 2 modes were analyzed with soft x-ray imaging techniques. Ion-cyclotron heating at second harmonic operation increased the plasma temperature by 100 eV.

40984 (PPPL—2233, pp 15-21) **ATC tokamak.** Ellis, R.A. Jr. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

The Adiabatic Toroidal Compressor (ATC) successfully demonstrated major-radius compression of ohmic and auxiliary-heated tokamak plasmas. Plasma densities well above 10^{14} cm^{-3} were reached, along with central ion and electron temperatures above 1 keV.

40985 (PPPL—2233, pp 22-29) **Princeton Large Torus (PLT).** Hosea, J.; Goldston, R.; Colestock, P. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

In the PLT experimental program, ohmic, neutral-injection and ion-cyclotron heating techniques have been studied and improved, resulting in record ion temperatures. In addition, noninductive current-drive with lower-hybrid waves has been demonstrated. These achievements were made possible by the continual development and deployment of advanced plasma diagnostics, high-power rf systems, and specially-tailored materials and structures. The intermediate size of PLT has permitted flexible experimental operation and the separation of plasma core from plasma surface effects.

40986 (PPPL—2233, pp 30-35) **Poloidal Divertor Experiment (PDX) and the Princeton Beta Experiment (PBX).** Bol, K.; Okabayashi, M.; Fonck, R. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

A review of high-power neutral-beam heating, impurity studies, and high-beta research on the PDX/PBX tokamak, is presented.

40987 (PPPL—2233, pp 36-39) **S-1 spheromak.** Yamada, M. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

The S-1 device inductively generates spheromak plasmas with major radii of 40 to 65 cm and toroidal plasma currents up to 500 kA. The major objective is the investigation of MHD stability and transport characteristics of spheromaks that are stabilized in externally applied magnetic fields by loose-fitting conductors and coils.

40988 (PPPL—2233, pp 40-47) **Initial studies of confinement, adiabatic compression, and neutral-beam heating in TFTR.** Grove, D.J.; Meade, D.M. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

The Tokamak Fusion Test Reactor (TFTR) is intended to achieve approximate energy breakeven in D-T plasmas. Construction approval was received in March 1976, and the first plasma was produced in December 1982. Three major experimental run periods, the last ending April 1985, have yielded experimental results on confinement and heating that extend the scaling laws of smaller machines. The plasma parameters in TFTR are now approaching those required for breakeven in unthermalized, two-component regimes. They span the range from high-density operation with n/sub e/(0)tau/sub E/ ~ 4 x 10^{19} m^{-3} s to a low-density regime with T/sub i/(0) ~ (9 +- 2) keV. The maximum product n/sub e/(0)tau/sub E/T/sub i/(0) of about 9 x 10^{19} m^{-3} s keV was obtained at a central density, 1.1 x 10^{20} m^{-3}, by means of pellet injection.

40989 **(RAL—84-057) Particle acceleration in space and laboratory plasmas.** Bingham, R.; Bryant, D.A.; Hall, D.S. (Rutherford Appleton Lab., Chilton (UK)). Jun 1984. 17p. (CONF-8406254—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701760.

From Canadian Association of Physicists annual meeting; Sherbrook, Canada (18 Jun 1984).

The general principle of charged particle acceleration in space and laboratory plasmas is illustrated by a discussion of particular types of acceleration mechanisms which can be classified as either deterministic processes or stochastic processes. Acceleration by parallel electric fields, produced in double layers is an example of a deterministic process. Fermi acceleration and acceleration by turbulent wave fields are examples of stochastic processes. The physical acceleration mechanism involved in each type of process is discussed and examples given for space and laboratory plasmas.

40990 **(UCRL—92160) Improved approach to characterizing and presenting streak camera performance.** Wiedwald, J.D.; Jones, B.A. (Lawrence Livermore National Lab., CA (USA)). 15 Jul 1985. Contract W-7405-ENG-48. 7p. (CONF-850887—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015188.

From SPIE international technical symposium on optical and electro-optical engineers; San Diego, CA, USA (18 Aug 1985).

The performance of a streak camera recording system is strongly linked to the technique used to amplify, detect and quantify the streaked image. At the Lawrence Livermore National Laboratory (LLNL) streak camera images have been recorded both on film and by fiber-optically coupling to charge-coupled devices (CCD's). During the development of a new process for recording these images (lens coupling the image onto a cooled CCD) the definitions of important performance characteristics such as resolution and dynamic range were re-examined. As a result of this development, these performance characteristics are now presented to the streak camera user in a more useful format than in the past. This paper describes how these techniques are used within the Laser Fusion Program at LLNL. The system resolution is presented as a modulation transfer function, including the seldom reported effects that flare and light scattering have at low spatial frequencies. Data are presented such that a user can adjust image intensifier gain and pixel averaging to optimize the useful dynamic range in any particular application.

40991 **Technique for in situ calibration of an x-ray streak camera in the nanosecond regime using a high density Z-pinch.** Jones, L.A.; Kallne, E.; Kania, D.R.; Maestas, M.; McGurn, J.S.; Shepherd, R. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Applied Physics;* **58**: No. 5, 1711-1714(1 Sep 1985).

A technique for calibrating an x-ray streak camera in situ has been developed. It has been applied to an x-ray streak camera installed on a collapsing gas shell Z-pinch. The calibration was done by simultaneously measuring the emitted x-rays using a pinhole camera, an InP:Fe photoconductive detector, and the streak camera. The spatial dimension of the streak image was calibrated by integrating the film density over time and fitting the resulting data to the corresponding information taken from an x-ray pinhole image. The temporal calibration was obtained by similarly fitting the film density from the x-ray streak image as a function of time integrated over the appropriate part of the spatial dimension with the signal from an InP:Fe photoconductive detector. By using this technique we have found a spatial magnification of the streak camera system consistent with the results derived from the geometrical optics to within 10%. A temporal dispersion of 2.5 +- 0.5 ns/mm was obtained, which is in agreement with the nominal speed of 2.5 ns/mm. This technique also yielded an absolute intensity calibration of the streak camera.

40992 **Proton ring trapping in a gated magnetic mirror.** Pedrow, P.D.; Greenly, J.B.; Hammer, D.A.; Sudan, R.N. (Laboratory of Plasma Studies, Cornell University, Ithaca, New York 14853). *Applied Physics Letters;* **47**: No. 3, 225-226(1 Aug 1985). Contract AC02-77ET53005.

An axis-encircling proton ring has been trapped for times (roughly-equal4 μs) much longer than the ion cyclotron period (roughly-equal80 ns). The rings, with mean radius 10 cm and with particle energies < or =430 keV, made eight passes through the 1.5-m-long magnetic mirror well with static and puffed hydrogen used for space-charge neutralization. The measured proton inventory was typically 2 x 10^{10} protons during the first pass and 2 x 10^{13} protons during the eighth and final pass. With a central solenoidal field of 0.8 T, the peak diamagnetism and azimuthal current density of the injected ring were typically 10 mT (100 G) and 10 A/cm^2, respectively.

40993 **Wave absorption at the second harmonic of the electron-cyclotron frequency in a tokamak plasma.** McDermott, F.S.; Bekefi, G.; England, A.C.; Attenberger, S.E.; Batchelor, D.B.; Edmonds, P.H.; Goldfinger, R.C.; Kindsfather, R.R.; Lazarus, E.A.; Murakami, M. (Department of Physics, Research Laboratory of Electronics and Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **28**: No. 8, 2625-2627(Aug 1985).

Wave absorption in the ISX-B tokamak [Phys. Rev. Lett. 44, 647 (1980)] at the second harmonic ($\omega = 2\omega$/sub c/e) of the electron-cyclotron frequency is reported. Measurements of the absorption of a wave polarized in the extraordinary mode and propagating perpendicular to the toroidal magnetic field are in agreement with computations.

40994 **Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy.** Hailey, C.J.; Rockett, P.; Eckart, M.; Burkhalter, P.G. (KMS Fusion, Inc., 3621 South State Road, P.O. Box 1567, Ann Arbor, Michigan 48106-1567). *Review of Scientific Instruments;* **56**: No. 8, 1553-1556(Aug 1985). Contract AC08-82DP40152.

A Bragg crystal spectrometer, utilizing a microchannel plate coupled to optical film as the detection medium, has been constructed for use in soft x-ray spectroscopy. The sensitivity of this intensified gated camera to x-rays has been compared directly with standard x-ray film using a calibrated x-ray source. In addition, this high gain, intensified crystal spectrograph (ICS) has been used in an experiment to precisely measure spectral coincidences between x-ray lines in laser-generated plasmas, thus identifying candidates for photoresonant x-ray lasing schemes in the 10—21-A region. At long wavelengths the ICS was able to obtain useful data on faint lines in a single laser shot, rather than the multiple shots required by an adjacent spectrograph using x-ray film. It also allowed line coincidences to be verified by a new technique utilizing split disk targets. The design and construction of the ICS and results obtained with it are compared with those obtained with standard x-ray film.

40995 **Finite orbit analysis for long wavelength modes in a plasma with a hot component.** Hammer, J.H.; Berk, H.L. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Physics of Fluids;* **28**: No. 8, 2442-2449(Aug 1985).

The z-pinch model is used to calculate finite Larmor radius effects of a plasma with a hot component plasma annulus. The equations are analyzed for layer modes and the finite Larmor radius stabilization condition is calculated. Stability requires k^2 rho^2/sub h/ Rβ/sub h//Δ> or $\approx$1, where k is the wavenumber in the z direction, rho/sub h/ the hot species Larmor radius, β/sub h/ the hot particle beta, and Δ the thickness of the pressure profile. In addition a new instability is found, caused by the interaction of the precessional modes associated with inner and outer edges of the hot particle pressure profile.

40996 **Magnetohydrodynamic equilibrium and stability of rotating field-reversed configurations with excluded multipole fields.** Spencer, R.L.; Tuszewski, M. (University of California, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physics of Fluids;* **28**: No. 8, 2510-2516(Aug 1985).

The rotational instability in field-reversed configurations (FRC's) is observed experimentally to be suppressed by the application of multipole fields. In this paper the equilibrium and stability of a FRC with multipole fields that do not penetrate into the plasma are studied. It is shown that two rotating magnetohydrodynamic (MHD) equilibria are possible for a long FRC in a multipole field. One is nearly circular while the other is cusp shaped. Experiments and hybrid simulations indicate that cusp-like equilibria are usually obtained. The effect of helical multipole fields on the equilibrium is also discussed. The stability of such a configuration has been previously studied by using the MHD model on a circular plasma and by using a hybrid simulation code. In the important quadrupole case, the two calculations disagree: the simulation shows that the mode is stabilized while the circular MHD calculation predicts that it remains unstable. A close look at the MHD calculation shows that stability is strongly influenced by the shape of the equilibrium. Simple estimates indicate that the cusp-like equilibrium should be more stable than the circular one.

40997 **Weibel instability in the spherical corona of a laser fusion target.** True, M.A. (KMS Fusion, Inc., P. O. Box 1567, Ann Arbor, Michigan 48106). *Physics of Fluids;* **28**: No. 8, 2597-2601(Aug 1985). Contract AC08-82DP40152.

The Weibel instability is caused by anisotropy in the velocity distribution. In the collisionless spherical corona of a laser fusion target, anisotropy in electron velocity space is naturally produced by a localized source because angular momentum, l = mv/sub perpendicular/r, is conserved and the perpendicular energy, E/sub perpendicular/ = l^2/2mr^2, decreases at radii large compared to the source radius. This occurs even if the source is locally isotropic (e.g., inverse bremsstrahlung around the critical density). Linear

growth rates are computed for the Weibel instability with a model distribution that includes the aforementioned effects as well as diffusion in angular momentum and energy loss by hydrodynamic expansion.

40998 **Stability of magnetically insulated electron flow.** Mendel C.W. Jr.; Swegle, J.A.; Seidel, D.B. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review [Section] A: General Physics;* **32**: No. 2, 1091-1097(Aug 1985).

The stability of magnetically insulated electron flow is studied for wavelengths longer than gyrolengths and frequencies lower than gyrofrequencies. This is done by using a general theory that allows for a distribution of electrons of different canonical momentum and total energy. The stability theory leads to a set of integro-differential equations for the eigenfunctions of the potentials. The integral portion of the equations relates positions across the flow that are connected by the finite size of the electron orbits. A general stability criterion is found. The stability of the flow is determined by the distribution of the electrons in canonical-momentum—total-energy space. The criterion can be stated roughly as depending upon whether the distribution function increases or decreases with drift velocity. If it increases, the flow is unstable.

40999 **Electron-acoustic mode.** Gary, S.P.; Tokar, R.L. (Earth and Space Sciences Division, University of California, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physics of Fluids;* **28**: No. 8, 2439-2441(Aug 1985). Contract AC02-82ER53136.

This paper examines electrostatic modes in an unmagnetized, homogeneous, Vlasov plasma with three Maxwellian components: ions, hot electrons, and cool electrons. In such a plasma, the electron-acoustic mode with frequencies between the ion and electron plasma frequencies may propagate with light damping. The conditions that allow propagation of this mode, which is distinct from the well-known ion-acoustic and Langmuir waves, are given in detail; approximate necessary conditions are 10< or ≈T/sub h// T/sub c/ and 0<n/sub c/<0.8n/sub e/, where the subscripts c, h, and e refer to the cool and hot electron components and the total electron population, respectively.

41000 **Spectral properties of the kinetic Alfven wave in cylindrical tokamak geometry.** van Rij, W.I.; Vahala, G.; Sigmar, D.J. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physics of Fluids;* **28**: No. 8, 2484-2493(Aug 1985). Contract AC05-84OR21400.

It is shown, for a tokamak-like cylindrical plasma and small poloidal and toroidal mode numbers, that the full gyrokinetic shear Alfven spectrum is discrete when k/sub parallel/not =0. Calculations of the global eigenmodes of the magnetohydrodynamic (MHD) limit, and their first-order finite Larmor radius (FLR) corrections, are presented. First-order FLR theory is found to be a good approximation to full FLR theory, even for modes with high radial node number. In the presence of a positive density gradient, such as that which may occur with pellet fueling of the plasma, the existence of global MHD eigenmodes above the Alfven continuum is confirmed.

41001 **Evidence in the second-harmonic emission for self-focusing of a laser pulse in a plasma.** Stamper, J.A.; Lehmberg, R.H.; Schmitt, A.; Herbst, M.J.; Young, F.C.; Gardner, J.H.; Obenschain, S.P. (U. S. Naval Research Laboratory, Washington, DC 20375-5000). *Physics of Fluids;* **28**: No. 8, 2563-2569(Aug 1985).

Short-pulse (300 psec), high-intensity (10^{14}-10^{15} W/cm^2) Nd-laser light was propagated into variable scale length plasmas (L/sub n/equivalentn/deln = 200—400 μm at 0.1 critical density)= preformed by long-pulse (4 nsec), low-intensity (≈6 x 10^{12} W/cm^2) irradiation of planar targets. For high short-pulse intensities (> or =5 x 10^{14} W/cm^2), time-integrated images show filament-shaped regions of second-harmonic ($2\omega_0$) emission from the low density (0.01< or =n/sub e//n/sub c/< or =0.2) region of the ablation plasma. Two-dimensional computer calculations of the hyrodynamics and laser beam propagation indicate that these filaments are consistent with ponderomotive self-focusing of the short pulse. A theoretical model that explains the $2\omega_0$ generation mechanism within low-density filaments is also presented.

41002 **Experimental results and theoretical analysis of the effect of wavelength on absorption and hot-electron generation in laser-plasma interaction.** Garban-Labaune, C.; Fabre, E.; Max, C.; Amiranoff, F.; Fabbro, R.; Virmont, J.; Mead, W.C. (Equipe de Greco Interaction Laser Matiere, Laboratoire de Physique Des Milieux Ionises, Groupe de Recherche du Centre National de la Recherche Scientifique, Ecole Polytechnique, F-91128 Palaiseau Cedex, France). *Physics of Fluids;* **28**: No. 8, 2580-2590(Aug 1985). Contract W-7405-ENG-48.

Recent experiments performed at Ecole Polytechnique on the wavelength scaling of laser light absorption by flat plastic targets are presented and interpreted. The measurements show larger absorption fractions for shorter laser wavelengths, lower laser intensities, and longer laser pulse lengths. These experiments are analyzed using computer hydrodynamics codes, and show that there are two possible physics models consistent with the data: (1) Inhibited electron heat flow together with absorption rates higher than those predicted by resonance absorption and inverse bremsstrahlung. (2) Nearly classical heat flow, with no additional enhancement in the absorption rate.

41003 **Spectrum and propagation of lower-hybrid waves in a tokamak plasma.** Watterson, R.L.; Takase, Y.; Bonoli, P.T.; Porkolab, M.; Slusher, R.E.; Surko, C.M. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **28**: No. 8, 2622-2624(Aug 1985). Contract AC02-78ET51013.

Waveguide-launched lower-hybrid waves are studied using CO_2 laser scattering techniques. These experiments provide the first direct experimental confirmation that the spectrum of the wavelengths inside, but near the edge of, the tokamak plasma is similar to predictions of linear theory for the launched spectrum and varies with waveguide phasing. The spectrum observed farther into the plasma is dominated by longer wavelengths and is much less dependent on phasing. An explanation of these results is presented.

41004 **Local power conservation for linear wave propagation in an inhomogeneous plasma.** McVey, B.D.; Sund, R.S.; Scharer, J.E. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review Letters;* **55**: No. 5, 507-510(29 Jul 1985). Contract AC02-78ET51013.

An expression for local power absorption for linear wave propagation in a nonuniform hot magnetoplasma is derived from fundamental principles. The power-absorption definition is used to obtain a local power-conservation relation for a one-dimensional configuration. The formalism is applied to wave propagation in the ion cyclotron range of frequencies where strong damping and mode-conversion processes are present.

41005 **Electron temperature and density measurements by harmonic electron cyclotron emissions from doublet-III tokamak plasma.** Yamamoto, T.; Abe, M.; Hirayama, T.; Kameari, A.; Kitsunezaki, A.; Kodama, K.; Konoshima, S.; Nagami, M.; Sengoku, S.; Shimada, M. (Japan Atomic Energy Research Institute, Tokai, Naka, Ibaraki, Japan). *Physical Review Letters;* **55**: No. 1, 83-86(1 Jul 1985). Contract AT03-80SF11512.

The intensity ratio of the second- to the third-harmonic cyclotron emission, measured by a scanning Fourier-transform spectrometer, is investigated for a wide range of discharge parameters. Dependences of the ratio on electron temperature and density are described by the model of plane-parallel walls. The time evolution of central electron density deduced from the ratio is consistent with multichannel CO_2 interferometer data within the estimated experimental error.

41006 **Implicit algorithm for compressible three-dimensional magnetohydrodynamic calculations.** Aydemir, A.Y.; Barnes, D.C. (Institute for Fusion Studies, University of Texas, Austin, Texas 78712). *Journal of Computational Physics;* **59**: No. 1, 108-119(30 May 1985). Contract FG05-80ET53088.

An efficient algorithm for the solution of compressible magnetohydrodynamic equations in a three-dimensional geometry is presented. Compressional Alfven waves are treated implicitly, thus greatly increasing the stable time step of the calculation and making it possible to study magnetohydrodynamic (MHD) phenomenon on resistive time scales.

41007 **Cyclotron resonance in a noneutral plasma.** Prasad, S.A.; Morales, G.J.; Fried, B.D. (Physics Department, University of California at Los Angeles, Los Angeles, California 90024). *Physical Review Letters;* **54**: No. 21, 2336-2338(27 May 1985).

Single-component plasmas are found to exhibit a reversal in the roles of cyclotron and upper hybrid resonances familiar in neutral plasmas. There is a global resonance at the cyclotron frequency $\omega = \Omega$equivalentqB/mc and a local field cancellation at layers where $\omega = \Omega_1 = (\Omega^2$-ω/sub p/$^2)$/sup 1/2/ ω/sub p/ being the local plasma frequency. Thermal effects limit the amplitude of the global resonance and produce energy absorption at the $\omega = \Omega_1$ layers.

41008 **Princeton spectral equilibrium code: PSEC.** Ling, K.M.; Jardin, S.C. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Computational Physics;* **58**: No. 3, 300-335(15 May 1985). Contract AC02-76CH03073.

A fast computer code has been developed to calculate free-boundary solutions to the plasma equilibrium equation that are consistent with the currents in external coils and conductors. The free-boundary formulation is based on the minimization of a mean-square error epsilon-c while the fixed-boundary solution is based on a variational principle and spectral representation of the coordinates x(psi, θ) and z(psi, θ). Specific calculations using the Columbia University Torus II, the Poloidal Divertor Experiment (PDX), and the Tokamak Fusion Test Reactor (TFTR) geometries are performed.

41009 **High-n ideal and resistive shear Alfven waves in tokamaks.** Cheng, C.Z.; Chen, L.; Chance, M.S. (Plasma Physics Laboratory, Princeton University, P.O. Box 451, Princeton, New Jersey 08544). *Annals of Physics (New York);* **161**: No. 1, 21-47(15 Apr 1985). Contract AC02-76CH03073.

Ideal and resistive MHD equations for the shear Alfven waves are studied in a low-β toroidal model by employing the high-n ballooning formalism. The ion sound effects are neglected. For an infinite shear slab, the ideal MHD model gives rise to a continuous spectrum of real frequencies and discrete eigenmodes (Alfven-Landau modes) with complex frequencies. With toroidal coupling effects due to nonuniform toroidal magnetic field, the continuum is broken up into small continuum bands and new discrete toroidal eigenmodes can exist inside the continuum gaps. Unstable ballooning eigenmodes are also introduced by the bad curvature when $\beta >$ β/sub c/. The resistivity (eta) can be considered perturbatively for the ideal modes. In addition, four branches of resistive modes are induced by the resistivity: (1) resistive entropy modes which are stable with frequencies going to zero with resistivity as eta/sup 1/3/; (2) tearing modes which are stable ($\Delta' < 0$) with frequencies approaching zero as eta/sup 3/5/; (3) resistive periodic shear Alfven waves which approach the finite frequency end points of the continuum bands as eta/sup 1/2/; and (4) resistive ballooning modes which are purely growing with growth rate proportional to eta/sup 1/3/β/sup 2/3/ as eta→0 and β→0.

41010 **Muon-catalysed fusion as a finite Markov process.** Van Siclen, C.DeW. (Idaho National Engineering Lab., Idaho Falls (USA)). *Journal of Physics G: Nuclear Physics;* **11**: No. 2, 267-276(Feb 1985).

By regarding muon catalysis of nuclear fusion in a mixture of hydrogen isotopes as a series of stochastic processes, markov chain theory is used to derive several exact analytic equations relating the rates of the various reactions and the sticking coefficients for the fusion channels. These include expressions for the mean number of pd, dd, dt, tt and pt fusions per muon, the mean total number of fusions per muon and the muon cycling rate, which reduce to the corresponding well known expressions for catalysis in a deuterium-tritium mixture. Inclusion of the fusion reaction dd$\mu \rightarrow$ pμ + t provides a particularly interesting complication, as this process gives rise to a catalysis cycle that may not return a free muon to the system.

41011 **Theoretical study of ICRF effects on multiple-mirror confinement.** Doniger, K.J.; Lieberman, M.A.; Lichtenberg, A.J. (California Univ., Berkeley (USA). Dept. of Electrical Engineering and Computer Sciences). *Nuclear Fusion;* **25**: No. 1, 3-20(Jan 1985).

The improvements in multi-mirror confinement due to an asymmetrically applied ion cyclotron resonance field (ICRF) are determined. The resonance field is used to selectively reflect ions that travel away from the centre of the device, thus creating a net ion drift towards the centre. The ICRF effects in heating and scattering the ions and modifying the loss cone geometry are determined in detail. A one-dimensional, non-ignited (finite Q = fusion power/recirculating power) model of a multiple-mirror system is used to investigate confinement. Various scaling laws are numerically derived and compared to those of a symmetric system without ICRF. Radial diffusion due to classical collisions and ICRF effects is calculated. A 21-cell machine with a peak field of 280 kG and Q=5 is reduced from 845 m to 580 m in length with the addition of the asymmetric ICRF. The total fusion power generated by the system is reduced from 8 to 6.3 GW.

41012 **Regime of improved energy confinement in beam-heated expanded-boundary discharges in Doublet III.** Ohyabu, N.; Burrell, K.H.; DeBoo, J. (GA Technologies, Inc., San Diego, CA (USA)). *Nuclear Fusion;* **25**: No. 1, 49-64(Jan 1985).

Neutral-beam-heated expanded-boundary (XB) divertor discharges have been obtained in Doublet III with high heating efficiency for wide ranges of plasma parameters (Isub(p): 300-800 kA; Bsub(T): 8-24 kG; n-barsub(e): (2-10)x10^{13}cm^{-3}; Psub(b)<4.5 MW, βsub(p)<=1.6, βsub(t)<=2.8%). The improved heating efficiency is well correlated with a configuration change from limiter discharges to XB discharges. The beam-heated, fully diverted expanded-boundary discharges with a limiter/separatrix distance greater than 1.5 cm exhibit an improvement of up to a factor of two in energy confinement time. The tausub(E) increases approximately linearly with Isub(p), but is insensitive to variations of a factor of two in n-barsub(e) and Bsub(T). Over the inner two-thirds of the plasma radius (r/a<=0.7), the shape of the Tsub(e) profile for XB discharges is similar to that for limiter discharges. Hence, the improvement of the global energy confinement is consistent with a reduction of thermal conductivity over most of the plasma radius. With 2 MW of neutral-beam injection into a high-current (Isub(p)=750 kA) XB discharge, energy confinement times tausub(E) approx.= 115 ms and n-barsub(e)tausub(E) approx.= 1x10^{13}cm^{-3}.s^{-1} have been obtained. At high beam power (Psub(b)>3 MW), a mild deterioration of the energy confinement time has been observed.

41013 **Global energy confinement scaling for neutral-beam-heated tokamaks.** Kaye, S.M.; Goldston, R.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **25**: No. 1, 65-69(Jan 1985).

A total of 677 representative discharges from seven neutral-beam-heated tokamaks have been used to study the parametric scaling of global energy confinement time. Contributions to this data base were from Asdex, DITE, D-III, ISX-B, PDX, PLT and TFR, and were taken from results of gettered, L-mode type discharges. Assuming a power law dependence of tausub(E) on the discharge parameters kappa, Isub(p), Bsub(t), n-barsub(e)Psub(tot), a and R, standard multiple linear regression techniques were used in two steps to determine the scaling. The results indicate that the discharges used in the study are well described by the scaling tausub(E) is proportional to kappasup(0.28)Bsub(T)sup(-0.09)Isub(p)sup(1.24)n-barsub(e)sup(0.26) Psub(tot)sup(-0.58)asup(-0.49)Rsup(1.65).

41014 **Current drive in a high beta tokamak using magnetic pumping.** Chen, J.; Marshall, T.C. (Columbia Univ., New York (USA). Plasma Physics Lab.). *Plasma Physics and Controlled Fusion;* **27**: No. 1, 55-67(Jan 1985).

The R.F. current drive by magnetic pumping of a single wave in collisionless plasma is calculated by using an adiabatic invariant method on the Vlasov equation. The self-consistent field effect on this current is also calculated by the adiabatic method, and the relation between the efficiency and the external pumping wave amplitude is obtained. Calculations are made, appropriate to an experimental test in a small high beta Tokamak.

41015 **Using perpendicular electron cyclotron emission to diagnose the thermal-barrier electrons in a tandem mirror.** Celata, C.M. (Dartmouth Coll., Hanover, NH (USA)). *Nuclear Fusion;* **25**: No. 1, 35-48(Jan 1985).

Possibilities are explored for diagnosing the hot-electron distribution function of the thermal barriers of tandem mirrors, using perpendicular electron cyclotron emission. Emission from a relativistic bi-Maxwellian with a loss cone is calculated in the single-particle limit. Formulae are derived for finding T perpendicular by measurng frequencies of the harmonic intensity maxima at optically thin frequencies, or the intensity at optically thick frequencies. A positive deltaf/deltap perpendicular in the distribution function is shown to lead to decreased absorption and instability for low T perpendicular. Finally, the perpendicular source function is calculated in the single-particle limit for this distribution function.

41016 **Magnetic well depth in EBT and sensitivity to hot-electron ring geometry.** Jaeger, E.F.; Berry, L.A.; Hendrick, C.L.; Richards, R.K. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* **25**: No. 1, 71-84(Jan 1985).

The paper examines the possibility that diamagnetic currents in the hot-electron rings in the ELMO Bumpy Torus (EBT) plasma are strong enough to reverse gradients in phi dl/B, thereby providing gross magnetohydrodynamic stability. Using a two-dimensional solution to the Grad-Shafranov equation with tensor pressure, the electromotive force induced in a diamagnetic loop surrounding the EBT plasma is computed. This allows a direct comparison between the calculated and measured diamagnetic loop signals for different values of perpendicular energy stored in the electron rings.

41017 **Bounce-averaged Monte-Carlo calculations of ripple transport in stellarators.** Hitchon, W.N.G.; Beidler, C.D.; Shohet, J.L. (Wisconsin Univ., Madison (USA). Torsatron/Stellarator Lab.); Mynick, H.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **25**: No. 1, 105-107(Jan 1985).

Letter-to-the-editor.

A rapid simulation of transport by trapped particles in stellarators, based on conservation of J, has been developed. At very low collision frequency the diffusion rates are not entirely in agreement with analytic theory. The potential importance of effects not described by an 'averaged' theory is discussed.

41018 **Stellarator hybrids.** Furth, H.P.; Ludescher, C. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Soviet Journal of Plasma Physics (English Translation);* **11**: No. 1, 2-6(Jan 1985).

Tokamak-stellarator and pinch-stellarator hybrids are reviewed. The t lational transform technique is proposed as a means of improving MHD stabi lity. (AIP)

41019 **Global conditions and electron energy transport*.** Coppi, B. (Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Soviet Journal of Plasma Physics (English Translation);* **11**: No. 1, 49-53(Jan 1985).

A class of transport coefficients that has been adopted in order to describe the observed electron energy confinement properties of high-temperature plasmas with different forms of thermal energy input is discussed.

41020 **Can the electrostatic ion-cyclotron instability be driven by a two-dimensional sheath.** Schittwieser, R.; Rynn, N.; Koslover, R.; Karim, R. (California Univ., Irvine (USA). Dept. of Physics). *Plasma Physics and Controlled Fusion;* **26**: No. 12, 1591-1595(Dec 1984).

An experiment in a single-ended Q-machine was conducted in which a voltage was applied between two concentric floating electrodes which terminated the plasma column. When the inner electrode was more than 200 V positive with respect to the outer one the electrostatic ion-cyclotron instability was observed. In the usual case the electron current is drawn between the grounded (plasma generating) hot plate and a positively biased electrode, with only a small voltage needed to trigger the instability. However, the current threshold is the same for both cases, indicating that it is a critical electron drift speed, not a sheath effect, which is necessary for the instability.

41021 **Electrostatic ion-cyclotron instability driven by a slow electron drift.** Schrittwieser, R.; Rynn, N.; Koslover, R.; Karim, R. (California Univ., Irvine (USA). Dept. of Physics). *Plasma Physics and Controlled Fusion;* **26**: No. 12, 1597-1604(Dec 1984).

The electrostatic ion-cyclotron instability can be excited in a single-ended Q-machine by a positively biased collector. An experiment is carried out to prove that drifting electrons are able to excite the ion-cyclotron instability. An electron drift is produced without the formation of a localized two-dimensional sheath. To that end the plasma electrons are delivered by a source which is spatially separated from the ion source. If the central section of these electrons is slightly accelerated by a grid the instability is observed.

41022 **Narrow band, near UV, high repetition rate laser induced fluorescence system for use as an edge diagnostic in fusion machines.** Young, C.E.; Calaway, W.F.; Gruen, D.M.; Pellin, M.J. (Materials Science and Technology Division Argonne National Laboratory, Argonne, IL). *Fusion Technology;* **6**: No. 2, 434-446(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

A laser system for impurity diagnostics in the edge region of plasma devices is described. It consists of a scanning, single mode, cw dye laser followed by a 3-stage, fast flow dye cell amplifier, pumped by a high repetition rate excimer laser (60 mJ/pulse at 130 Hz, for 308 nm output). Substantial improvements are achieved over previous systems in scan speed (30 GHz/100 ms) and velocity resolution (now small relative to the widths of thermal distributions). The usefulness of high resolution is demonstrated by a model calculation for Fe velocity spectra involving the presence of thermal and sputtered flux, and spatial averaging. The high output pulse power (0.8 MW at 604 nm, 80 kW at 302 nm) allows efficient frequency doubling and can be used to vary the effective bandwidth by power broadening. Broadband operation (50 GHz FWHM) is also possible, for saturated measurements of atomic density. Laboratory velocity spectra for Fe atoms sputtered in the ground state demonstrate the capability for such measurements in a single Tokamak discharge at estimated densities of 10^8 atoms/cm^3.

41023 **Particle simulation of plasmas.** Douson, D.M.; Lin, A.T. (California Univ., Los Angeles (USA). Dept. of Physics). pp 83-146 of Plasma physics basis. Galeev, A.A.; Sudan, R. (eds.). Moscow, USSR; Ehnergoatomizdat (1984). (In Russian)

Translation from English.

Application of the method for numerical simulation of plasma turbulences is considered. Models of particles applicable for plasma simulation, some methods for diagnostics of the results of these calculations are discussed, and examples of the studied processes are presented. The results of investigation into transport in plasma transverse to the magnetic field generated by thermal electrostatical and magnetostatical fluctuations are described. Parametrical instabilities occurring from electromagnetic wave scattering on ion waves (Brilluen), on electron waves (Raman) or on particles (Compton) are considered, conversion of modes in inhomogeneous magnetized plasma is presented, generation of intense radiation from relativistic electron beams and inverse processes, i. e. acceleration of charged particles by an intense laser pulse are described.

41024 **(CAPE—2943) Novette pulse-power-system description (Engineering Materials).** (Lawrence Livermore National Lab., CA (USA)). Dec 1981. Contract W-7405-ENG-48. H. File Number TI85000822.

Novette is a large, two-beam, two-wavelength laser facility at Lawrence Livermore National Laboratory. The Novette laser projected performance exceeds that of the 20-arm Shiva laser and the frequency-multiplying capability provides more-efficient target interaction. Novette is comprised of two arms of the Nova laser. New designs allow these two arms to exceed the performance of the 20 arms of Shiva. Assembling these two arms on an accelerated schedule allow the experimental program to continue with minimum interruption. The laser has been operational since January 1983. This paper is a summary of the pulse power systems for Novette; the flashlamp power system, the pulsers for the various optical shutters and the pulse power control system.

41025 **(CONF-850148—1) FEDC trade studies: upgraded capability exists to examine cost/performance sensitivities for all tokamak options.** Flanagan, C.A. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85006919.

41026 **(CONF-850708—1) Tokamak startup: problems and scenarios related to the transient phases of ignited tokamak operations.** Sheffield, J. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 37p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015321.

From Workshop on tokamak start-up - problems and scenarios related to the transient phases of long-burn operations; Erice, Italy (14 Jul 1985).

During recent years improvements have been made to tokamak startup procedures, which are important to the optimization of ignited tokamaks. The use of rf-assisted startup and noninductive current drive has led to substantial reduction and even complete elimination of the volt-seconds used during startup, relaxing constraints on poloidal coil, vacuum vessel, and structure design. This paper reviews these and other improvements and discusses the various bulk heating techniques that may be used to ignite a D-T plasma.

41027 **(CONF-8505175—1) TPSS plasma engineering studies: profile effects and plasma power balance.** Borowski, S.K.; Strickler, D.J. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85013638.

From TPSS meeting; Atlanta, GA, USA (15 May 1985).

Handwritten manuscript.

A computationally fast profile-averaged, steady-state plasma model has been developed to allow studies of radial effects in ignited and driven tokamak systems. This code was used to search for the smallest size tokamak consistent with power balance calculations. (MOW)

41028 **(DOE/DP/40124—65) Hydrodynamics of long-scale-length plasmas. Summary.** Craxton, R.S. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1984. Contract AC08-80DP40124. 43p. (CONF-841010—17). NTIS, PC A03/MF A01; GPO Dep. File Number DE85014410.

From Meeting of the Plasma Physics Division of the American Physical Society; Boston, MA, USA (27 Oct 1984).

A summary is given relating to the importance of long-scale-length plasmas to laser fusion. Some experiments are listed in which long-scale-length plasmas have been produced and studied. This talk presents SAGE simulations of most of these experiments with the emphasis being placed on understanding the hydrodynamic conditions rather than the parametric/plasma-physics processes themselves which are not modeled by SAGE. However, interpretation of the experiments can often depend on a good understanding of the hydrodynamics, including optical ray tracing.

41029 **(DOE/ET/53051—83) Multipole and tokamak research at the University of Wisconsin.** Sprott, J.C.; Prager, S.C. (Wisconsin Univ., Madison (USA)). May 1985. Contract AC02-76ET53051. 12p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014862.

Experimental axisymmetric toroidal confinement research has been pursued at the University of Wisconsin through the utilization of multipole and tokamak devices. Multipoles facilitated the controlled study of key confinement issues since in a single device one is able to vary, over a wide range, critical plasma parameters including ohmic current level, collisionality, field transform, magnetic shear and plasma beta. This feature, and the natural quiescence of multipole plasmas, has been exploited for over twenty years at Wisconsin through a sequence of different multipole devices culminating in the Levitated Toroidal Octupole. Important aspects of toroidal plasma equilibrium, stability, heating and transport have been studied which often could not be addressed in existing tokamaks. Toroidal confinement research using the Tokapole II poloidal divertor tokamak began in 1977, with emphasis on issues relating to the magnetic limiter topology.

41030 **(EUR-CEA-FC—1232) Elements of a method to scale ignition reactor Tokamak.** Cotsaftis, M. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Aug 1984. 48p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751933.

Due to unavoidable uncertainties from present scaling laws when projected to thermonuclear regime, a method is proposed to minimize these uncertainties in order to figure out the main parameters of ignited tokamak. The method mainly consists in searching, if any, a domain in adapted parameters space which allows Ignition, but is the least sensitive to possible change in scaling laws. In other words, Ignition domain is researched which is the intersection of all possible Ignition domains corresponding to all possible scaling laws produced by all possible transports.

41031 **(EUR-CEA-FC—1244) High power operation at 80 keV of the prototype PINI-B neutral injector of JET.** Becherer, R.; Bottiglioni, F.; Desmons, M.; Fumelli, M.; Raimbault, P.; Valckx, F.P.G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Oct 1984. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85751934.

In the framework of a cooperative program with JET and Culham Laboratory for neutral injection development for JET, FAR was charged to develop a 160 keV, 30 A, 5s deuterium beam required for the "extended performances" phase of JET. In addition to this main task, FAR Laboratory was also asked to test the PINI-B, one of the two prototypes of the 80 keV, 60 A, 5s hydrogen beam injectors intended for the "basic performances" phase of JET (the other prototype, the PINI-A, was tested at Culham). Tests of this unit were performed between June 82 and March 83. The main results of this work will be presented here.

41032 **(F—82003) Tritium monitoring requirements of fusion and the status of research.** Nickerson, S.B.; Gerdingh, R.F.; Penfold, K. (Canadian Fusion Fuels Technology Project, Toronto, Ontario). Oct 1982. 84p. NTIS (US Sales Only), PC A05/MF A01. File Number DE85701659.

This report is a summary of an investigation into the tritium monitoring requirements of tritium laboratories, D-T burning ignition experiments, and fusion reactors. There is also a summary of the status of research into tritium monitoring and a survey of commercially available tritium monitors.

41033 **(F—82004) Recommended program of tritium monitoring research and development.** Nickerson, S.B.; Gerdingh, R.F.; Penfold, K. (Canadian Fusion Fuels Technology Project, Toronto, Ontario). Oct 1982. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85701660.

This report presents recommendations for programs of research and development in tritium monitoring instrumentation. These recommendations, if implemented, will offer Canadian industry the opportunity to develop marketable instruments. The major recommendations are to assist in the development and promotion of two Chalk River Nuclear Laboratories' monitors and an Ontario Hydro monitor, and to support research and development of a surface monitor.

41034 **(GA-A—17940) Tritium control in helium-cooled blankets.** Wong, C.P.C.; Maya, I.; Kessel, C.; Roelant, D.; Schultz, K.R. (GA Technologies, Inc., San Diego, CA (USA); California Univ., Los Angeles (USA); Michigan Univ., Ann Arbor (USA). Dept. of Nuclear Engineering). Jun 1985. Contract AC03-84ER53158. 12p. (CONF-850405—16). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014783.

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

As a part of the Blanket Comparison and Selection Study (BCSS), GA Technologies was responsible for the design of helium-cooled, solid- and liquid-metal breeder blankets. Conceptual blanket designs were developed, including the consideration of the generation, transport, and extraction of tritium. Evaluations were made of the inventory and leakage of tritium for helium-cooled Li_2O and $LiAlO_2$ and liquid lithium breeder blankets for tokamak and tandem mirror reactors. To facilitate the evaluation, a solid breeder tritium code TRIT4 was developed. The results from this study indicate that tritium inventories and leakages are acceptable for the proposed helium-cooled blankets. An assumption made in the tritium leakage calculations was that tritium is released to the helium purge and coolant streams as T_2 and remains in that form. If oxidation to T_2O is possible, significant reduction in the tritium leakage will be possible. We conclude that more experimental data on breeder material properties and tritium permeation behavior are needed. However, we are certain that an adequate number of different techniques are available to control the breeder tritium inventory and leakage to an acceptable level in helium-cooled solid- and lithium-breeder blankets.

41035 (INIS-BR—260, pp 132-140) **Approximated neutronic calculation for the tritium breeding ratio in fusion reactor blankets.** Santos, R. dos (Centro de Informacoes Nucleares, Rio de Janeiro (Brazil)). 1983. (In Portuguese). NTIS (US Sales Only), PC A20/MF A01. File Number DE85781434. (CONF-8311246—).

From 4. Brazilian meeting on reactor physics; Itaipava, RJ, Brazil (3 Nov 1983).

An approximated model for the calculation of the tritium breeding ratio in conceptual thermonuclear fusion reactor blankets is presented. This model makes use of the exponential absorption concept due to the $Li^6(n, He^4)T$ and $Li^7(n, n'He^4)T$ reactions. The results of this approximated method are compared with reference benchmarks which were generated by the nuclear codes ANISN (discrete ordinates) and MORSE (Monte Carlo method). The maximum deviation among the results have been around 10%.

41036 (INIS-SU—289, pp 99-101) **Study on possibility of development of a laser multicharged ion source for a heavy ion fusion driver.** Barabash, L.Z.; Krechet, K.I.; Lapitskij, Yu.Ya.; Latyshev, S.V.; Shumshurov, A.V.; Bykovskij, Yu.A.; Golubev, A.A.; Kozyrev, Yu.P.; Sharkov, B.Yu. (Inst. Teoreticheskoj i Ehksperimental'noj Fiziki, Moscow, USSR). 1983. (In Russian). NTIS (US Sales Only), PC A17/MF A01. File Number DE85781267. (CONF-8210133—Vol.1).

From 8. All-Union conference on the charged particle accelerators; Protvino, USSR (19 Oct 1982).

The results of studying laser produced plasma ion sources for a heavy ion accelerating-storage complex used as a heavy ion fusion driver are presented. The following parameters were measured on an installation aimed for studying physical characteristics of heavy ion laser plasma for a lead target at laser radiation flux density of approximately 3×10^{10} W/cm^2: scattered ion charge composition, energy spectra and scattering angle distributions, ion currents, absolute number of ions in every charge state, plasma electron temperature. The ion current pulse duration varied from 3×10^{-4} s at Z^{+1} to 2×10^{-5} s at Z^{+10}. The maximum current amplitude of 2 mA corresponded to Z^{+7} charge. The scattering velocity increased with charge. The total number of ions that could be used for acceleration was approximately 5×10^{13} for Z^{+2} and 5×10^{12} for Z^{+6} per pulse. The ion laser source brightness was 2×10^{11} A/cm^2, the particle phase density was 10^{18} (cmxrad)$^{-1}$. 4 references, 4 figures.

41037 **(JAERI-M—83-235) Report of the 2nd workshop on particle material interactions for fusion research.** Ozawa, Kunio; Gesi, Kazuo; Iwata, Tadao (eds.). (Japan Atomic Energy Research Inst., Tokyo). Feb 1984. 178p. (In Japanese). NTIS (US Sales Only), PC A09/MF A01. File Number DE85701753.

The plenary session of the sub-committee for the data-banking of particle-material interactions in the Research Committee of A M Data Center was held at the JAERI Headquarters, Tokyo, February 24 and 25, 1982. The subsequent local meeting was held in Osaka branch office of JAERI, June 10, 1982. The aim of this workshop has been not only to make clear the present status in the A M data banking and the material science relevant to fusion research, but also to obtain an overview of the approaches that should be developed for solving the problems. In these workshops, 16 papers on the specified fields were presented by the committee members. This report contains these papers, and the investigation report in 1982 fiscal year on Diffusional Behaviour of Hydrogen and it's Isotope in Iron and Steel is added supplementarily. The contents of this report are composed of 4 chapters which are connected with each other concerning A M activities of hydrogen recycling: 1) Perspective review, 2) Re-emission and Retention, 3) Desorption and Diffusion, and 4) Radiation effects of neutron and ions on hydrogen recycling process.

41038 **(JAERI-M—84-087) In-pile test of tritium recovery from lithium oxide. Tritium release behavior.** Kurasawa, Toshimasa; Yoshida, Hiroshi; Watanabe, Hitoshi; Takeshita, Hidefumi; Miyauchi, Takejiro; Matsui, Tomoaki. (Japan Atomic Energy Research Inst., Tokyo). May 1984. 62p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. File Number DE85701615.

In-situ tritium recovery experiment with sintered lithium oxide pellets was performed under a high neutron fluence in the JRR-2. The irradiation hole VT-10 is the vertical one in the fuel rods region of the reactor, and the neutron flux is as follows: the thermal neutron flux with the epithermal neutron; 1.12×10^{14} n/cm^2. sec, the fast neutron flux; 1.0×10^{13} n/cm^2. sec. Irradiation material is the four pellets of cylindrical Li_2O with the size of 11mm-OD, 1.8mm-ID, 10mm-H, and their total weight is 6.67g(the apparent bulk density 86%TD). A sweep gas capsule with a inner heater was constructed for the present study. Irradiation temperatures were regulated in the high temperature range, 470 -- 760°C. Four cycles of irradiation tests were carried out from May to August in 1983, and the effective thermal neutron fluence and the burnup of ^{6}Li were 5.9×10^{19}nvt and 0.24% of total lithium(natural abundance of Li), respectively. The amount of generated tritium was calculated to be 31.2Ci by using a value of the depression factor of the thermal neutron flux(0.148) and the effective neutron cross section(543b) for the ^{6}Li(n, α) ^{3}H reaction. Present report describes the tritium release behavior in the in-situ tritium recovery apparatus and discuss the effects of the moisture, the hydrogen spiking, the irradiation temperature, etc.. Problems relative to a real time measurement of a comparatively high tritium concentration(10^{-1} -- 10^2 μCi/cm^3) in the helium gas stream were also investigated.

41039 **(PPPL—2190) Reaching ignition in the tokamak.** Furth, H.P. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1985. Contract AC02-76CH03073. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015100.

This review covers the following areas: (1) the physics of burning plasmas, (2) plasma physics requirements for reaching ignition, (3) design studies for ignition devices, and (4) prospects for an ignition project. (MOW)

41040 **(PPPL—2228) Vacuum vessel eddy current modeling for TFTR adiabatic compression experiments.** DeLucia, J.; Bell, M.; Wong, K.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1985. Contract AC02-76CH03073. 44p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015314.

A relatively simple current filament model of the TFTR vacuum vessel is described. It is used to estimate the three-dimensional structure of magnetic field perturbations in the vicinity of the plasma that arise from vacuum vessel eddy currents induced during adiabatic compression. Eddy currents are calculated self-consistently with the plasma motion. The Shafranov formula and adiabatic scaling laws are used to model the plasma. Although the specific application is to TFTR, the present model is of generation applicability.

41041 **(PPPL—2231) Relaxation of spheromak plasmas toward a minimum-energy state through global magnetic fluctuations.** Janos, A.; Hart, G.W.; Yamada, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1985. Contract AC02-76CH03073. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015202.

Globally coherent modes which are observed during formation in the S-1 Spheromak plasma are shown to be important for flux conversion and plasma relaxation toward a minimum-energy state. A significant finding is the temporal progression through the n = 5, 4, 3, 2; m = 1 mode sequence as q rises through rational fractions m/n, where n and m are defined by the functional dependence e/sup i(nphi + mθ/) of the fluctuations on toroidal angle phi and poloidal angle θ. Resistive MHD analysis predicts the observed modes and the sequence of occurrence.

41042 **(PPPL—2233) Experimental research on toroidal devices at PPPL: 1960-1985.** (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1985. Contract AC02-76CH03073. 81p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE85015311.

Separate abstracts were prepared for each of the 7 included papers. (MOW)

41043 (PPPL—2233, pp 1-8) **Experiments on the Model C Stellarator.** Yoshikawa, S.; Stix, T.H. Jun 1985. NTIS, PC A05/MF A01. File Number DE85015311.

In Experimental research on toroidal devices at PPPL: 1960-1985.

The Model C Stellarator was the last and most powerful of a series of stellarator devices operated at Princeton during the period from 1953 to 1969. Experiments on Model C addressed the problem of anomalous plasma loss and tested major innovative concepts including the divertor and radio-frequency (rf) heating. This review focuses on portions of Model C work that have strongly influenced present-day research and understanding of toroidal confinement in stellarators and tokamaks.

41044 **(SAND—85-1235C) Velocity measurements of laser driven flyers backed by high impedance windows.** Sheffield, S.A.; Rogers, J.W. Jr.; Castaneda, J.N. (Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 13p. (CONF-850736—30). NTIS, PC A02/MF A01; GPO Dep. File Number DE85015142.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

Because of possible applications to inertial confinement fusion, the response of free-standing foils to laser intensity levels of 10^3 to 10^6 GW/cm² has been well characterized. Our interest is in characterizing the response of free-standing and backed foils at much lower intensities, i.e., in the region of 1 to 20 GW/cm², and using these flyers to initiate insensitive secondary high explosives. The output of a 3.5-J Nd:glass laser with a 16 ns pulse was used to drive 1.5-mm-diameter aluminum (Al) flyers. The velocities of both free-standing flyers and flyers backed on the driven side by windows of water, fused silica, or sapphire were measured using ORVIS (Optically Recording Velocity Interferometer System). Intensities were on the order of 10 GW/cm² and velocities as high as 5 km/s were measured for 13-μm/thick, Al flyers. Velocity and acceleration were observed to vary only slightly with the shock impedance of the window. Preliminary measurements indicate that PETN (pentaerythritol tetranitrate) at a density of 1.4 grams/cm³, and HNS-FP (hexanitrostilbene-fine particle) at a density of 1.6 grams/cm³, can be promptly detonated by 66-μm-thick, Al flyers impacting at a velocity of near 2.5 km/s.

41045 **Effect of wall material on H^- production in a multicusp source.** Leung, K.N.; Ehlers, K.W.; Pyle, R.V. (Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Applied Physics Letters;* **47**: No. 3, 227-228(1 Aug 1985). Contract AC03-76SF00098.

The effect of wall material on volume H^- production in a magnetically filtered multicusp source has been investigated. Under the same discharge conditions, Al and Cu generally produce the highest H^- ion current. It is shown that secondary electrons emitted from wall surfaces can account for the difference in H^- yield.

41046 **Compact, inexpensive target design for steady-state heat removal in high-heat-flux fusion applications.** Combs, S.K.; Milora, S.L.; Foster, C.A.; Haselton, H.H.; Menon, M.M.; Tsai, C.C. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Review of Scientific Instruments;* **56**: No. 8, 1526-1530(Aug 1985). Contract AC05-84OR21400.

A high-heat-flux target has been developed for intercepting multimegawatt, multisecond neutral beams at Oak Ridge National Laboratory (ORNL). Water-cooled copper swirl tubes are used for the heat transfer medium; these tubes exhibit an enhancement in burnout heat flux over conventional axial flow tubes. The target consists of 126 swirl tubes [each 0.95 cm in outside diameter (o.d.) with 0.16-cm-thick walls and roughly-equal1 m long] arranged in a V shape and inclined with respect to the beam axis. In tests with the ORNL long-pulse ion source (13 x 43-cm grid), the target has handled up to 3-MW, 30-s beam pulses with no deleterious effects. The peak power density was estimated at roughly-equal15 kW/cm² normal to the beam axis (>5 kW/cm² maximum on tube surfaces). The water flow rate through the tubes was 0.33 l/s (5.2 gal/min) per tube (axial flow velocity = 11.6 m/s) with a corresponding pressure drop of 1.14 MPa (165 psi). To date, the target has absorbed an estimated 25 000 full-power (roughly-equal3 MW) pulses for a cumulative time of roughly-equal100 000 beam seconds without failure. Other potential applications for swirl tube technology in the fusion area include plasma limiters, divertor collector plates, rf launchers, and Faraday shields.

41047 **The United States program for magnetic fusion energy.** Dowling, R.J.; Berk, S.E.; Clarke, J.F. (Office of Fusion Energy, Office of Energy Research, U.S. Department of Energy, Washington, DC). *Fusion Technology;* **6**: No. 2, 327-334(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

The United States (U.S.) Government supports a national program that seeks to demonstrate the scientific and engineering feasibility of magnetic fusion. The goal of the U.S. program is to develop a reactor concept to the point where decisions on commercial development can be made. This goal focuses the U.S. program on moving from its present research and development status toward commercial development. The U.S. program is nearing completion of the scientific feasibility phase, which will demonstrate that a magnetically confined plasma can produce, on a laboratory scale, a significant amount of energy in a potentially useful form. The U.S. plan is to pursue, at a pace commensurate with available resources, the product definition phase, which will identify a potentially practical confinement concept, and the product development phase, which will develop the technical base necessary for decisions about

FOR REPRODUCTION

the practical use of magnetic fusion. This paper provides an overview of the U.S. magnetic fusion energy program including goals and objectives, strategy, status, international cooperation, and budgets.

41048 **Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor refueling.** Kim, K.; Honig, J. (Department of Electrical Engineering, University of Illinois, Urbana, Illinois). *Fusion Technology;* 6: No. 2, 372-377(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

Design, construction, testing, and performance evaluation of a small-bore plasma-arc-driven electromagnetic railgun system are described. The railgun system, which is intended for injecting high-velocity hydrogen pellets into the magnetic fusion devices for the purpose of refueling, has two acceleration stages. One consists of a gas gun preaccelerator and the other a railgun booster accelerator. The plasma-arc armature is formed behind the pellet by electrically discharging the propellant gas following the pellet into the railgun from the gas gun.

41049 **On the fabrication of a uniform thick fuel layer inside a cryogenic inertial confinement fusion target.** Kim, K. (Department of Electrical Engineering, University of Illinois, Urbana, Illinois). *Fusion Technology;* 6: No. 2, 357-363(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

Key physics issues essential to the fabrication of a uniform fuel layer inside a cryogenic spherical-shell inertial confinement fusion (ICF) target are addressed. Existing methods for fabricating cryogenic ICF targets are briefly reviewed and their anticipated difficulties in producing a thick uniform fuel layer are pointed out. New methods designed to circumvent the drawbacks of the existing techniques are proposed. Experimental devices intended to implement the new methods are described.

41050 **Design and construction of the vacuum vessel for the tandem mirror fusion test facility.** Gerich, J.W. (University of California, Lawrence Livermore National Laboratory, Livermore, California). *Fusion Technology;* 6: No. 2, 351-356(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

The authors have designed the MFTF-B vacuum vessel both to maintain the required vacuum environment and to structurally support the 42 superconducting magnets plus auxiliary internal and external equipment. The design calculations were greatly aided by computer models, which also speeded our redesign effort when the machine configuration was changed to the Axicell MFTF-B this past year.

41051 **Progress report on pump limiter developments for the TEXTOR tokamak: ALT-I.** Pontau, A.E.; Campbell, G.A.; Doyle, B.L.; Finken, F.H.; Gauster, W.B.; Guthrie, S.E.; Malinowski, M.E.; Ver Berkmoes, A.A.; Watson, R.D.; Whitley, J.B. (Sandia Nat. Laboratories, Livermore, CA). *Fusion Technology;* 6: No. 2, 384-392(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

A collaborative program is underway to field a comprehensive pump limiter experimental program on TEXTOR: Advanced Limiter Test-I (ALT-I). Either of two interchangeable limiter modules may be attached to an insertion/rotation mechanism to direct particles to the about1 m^3 pumping chamber. Pumping is provided primarily by a solid getter assembly at about20,000 1/sec. Variation of geometric dimensions and gas puffing in the modules will allow the study of plasma and neutral interaction in differing recycle regimes. Multiple diagnostic systems are incorporated into the pump limiter design for use in conjunction with TEXTOR plasma diagnostics. Initial experiments are scheduled for December 1983.

41052 **Vacuum measurements on the Tandem Mirror Experiment Upgrade (TMX-U) fusion experiment.** Hunt, A.L.; Lang, D.D.; Nexsen, W.E.; Pickles, W.L.; Turner, W.C. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 6: No. 2, 364-371(Sep 1984). (CONF-8309103—).

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

The gas inventory of the Tandem Mirror Experiment Upgrade (TMX-U) must be carefully controlled, if it is to successfully create various plasma configurations for thermal barrier experiments designed to provide an improved performance for tandem mirror experiments. This paper is a progress report on the calibration methods and pressure measurements of machine conditions deriving from recently improved neutral-beam gas control, and changes to the internal baffling geometry and the gettering system. Various recorded pressure vs time histories produced by the machine's internal vacuum systems and their pumping mechanisms are presented. An upgraded computer code for calculating dynamic pressures is described. Our concluding remarks deal with the problems of establishing and maintaining a pressure measuring system for a large fusion experiment, where the quality and reliability of components must be carefully considered.

41053 **Heavy ion fusion physics.** Bangerter, R.O. (Los Alamos National Lab., NM (USA)). *Laser and Particle Beams;* 2: 387-393(1984).

Some of the basic questions pertinent to the feasibility of heavy ion fusion are reconsidered with HIBALL I as the 'standard' HIF scenario. The questions are quantified by developing scaling laws that enable the cost and capacity of HIBALL-like power plants to be varied.

41054 **Design constraints for an RF-linac/storage-ring driver.** Wangler, T.P. (Los Alamos National Lab., NM (USA)). *Laser and Particle Beams;* 2: 413-424(1984).

Some equations are reviewed that must be satisfied when generating RF-linac/storage-ring systems for heavy ion fusion. To treat the phase-space constraints, new formulae are derived for separate transverse and longitudinal available dilution factors in terms of parameters of the RF-linac/storage-ring system. A method is outlined for generating accelerator designs that satisfy target, current amplification, phase-space, and space-charge constraints.

41055 **Integral experiments for fusion reactor shield design - summary of progress.** Santoro, R.T.; Alsmiller, R.G. Jr.; Barnes, J.M.; Chapman, G.T. (Oak Ridge National Lab., TN (USA)). pp 627-635 of Proceedings of the sixth international conference on radiation shielding, 2. Tokai, Japan; Japan Atomic Energy Research Inst. (1983). (CONF-830538—Pt.2).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

Neutron and gamma-ray energy spectra from the reactions of ~14-MeV neutrons in blanket and shield materials and from the streaming of these neutrons through a cylindrical duct (L/D ~2) have been measured and calculated. These data are being obtained in a series of integral experiments to verify the radiation transport methods and nuclear data that are being used in nuclear design calculations for fusion reactors. The experimental procedures and analytic methods used to obtain the calculated data are reviewed. Comparisons between measured and calculated data for the experiments that have been performed to date are summarized.

41056 **Proceedings of the sixth international conference on radiation shielding, 2.** Tokai, Japan; Japan Atomic Energy Research Institute (1983). 662p. (CONF-830538—Pt.2).

From 6. international conference on radiation shielding; Tokyo, Japan (16 May 1983).

Separate abstracts were prepared for each of the included papers. (MOW)

41057 **Laser fusion experiments at Lawrence Livermore Laboratory.** Ahlstrom, H.G. (Lawrence Livermore National Lab., CA (USA)). pp 1-287 of Laser-plasma interaction. Balian, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Service de Physique Theorique); Adam, J.C. (Ecole Polytechnique, 91 - Palaiseau (France). Centre de Physique Theorique) (eds.). Amsterdam, Netherlands; North-Holland (1982). (CONF-8006278—).

From Summer school on laser-plasma interaction; Les Houches, France (30 Jun 1980).

In this paper, the author discusses diagnostic instrumentation and experiments relevant to the use of high intensity, high energy, short pulse lasers to produce microexplosions of inertial confined thermonuclear fuel. First, the diagnostic instrumentation is dealt with: methods and instruments associated with measuring the absorption of the laser energy, the plasma conditions and the implosion history and burn of the thermonuclear fuel. The section on experiments treats the interaction of the laser light with the plasma and the transport of the energy in the generation of the spherical compression waves. In addition the laser irradiation facilities at Lawrence Livermore Laboratory are briefly discussed.

99 GENERAL AND MISCELLANEOUS

41058 **(CONF-8411176—Summ.) Historically black colleges and universities invitational working session, November 8 and 9, 1984.** Dobbins, C.J. (comp.). (Space Qualified Systems Ltd., Washington, DC (USA)). 19 Feb 1985. Contract AC01-83MI10027. 25p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85014907.

From Historically black colleges and universities invitational working session; Washington, DC, USA (8 Nov 1984).

The Department of Energy (DoE) convened a 2-day Invitational Working Session (See Appendix A) November 8 and 9, 1984 at which 61 Historically Black College and University (HBCU) and 25 federal representatives discussed the "Interactive R and D Cluster Model" developed by the NAFEO Science and Technology Advisory Committee. Its purpose was to solicit candid responses to the Cluster Model from both the institutional and federal agency perspectives. As a result, the Department of Energy would be provided feedback on the issues of the practicality of the use of the Model as a vehicle to improve HBCU participation in energy-related activites.

41059 **(DOE/MA—0138/5) Listing of awardee names: retired awards as of July 1, 1985.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Procurement Support). 1 Jul 1985. 679p. NTIS, PC A99/MF A01; 1; GPO Dep. File Number DE85014881.

The Listing of Awardee Names is a computerized listing issued quarterly from the Procurement and Assistance Data System (PADS), including an alphabetical listing of all acquisition and financial assistance awards (excluding purchase orders) with the Department of Energy. This volume provides awards that have been closed out and retired at the time of issuance of the listing.

41060 **(DOE/MI/10028—T2-App.) Management and technical assistance to minority business enterprise. Appendices. Final report.** (Resources, Inc., Washington, DC (USA)). 31 Jan 1985. Contract AC01-83MI10028. 184p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE85013107.

These appendices include work management plan, letters, implementation plan, software, analyses of potential technology procurements, etc. (DLC)

41061 **(GAO/NSIAD—85-61) Actions taken by DOD on GAO recommendations to improve spare parts requirements determination.** (General Accounting Office, Washington, DC (USA). National Security and International Affairs Div.). 30 Apr 1985. 32p. US General Accounting Office, Box 6015, Gaithersburg, MD 20877. File Number TI85901767.

Report to the Honorable Sam Nunn, United States Senate.

GAO found that actions taken by the military services and DOD to improve the spare parts requirements determination process, in response to prior GAO report recommendations, have resulted in estimated cost savings of over $800 million during the past 5 years. Additional actions in process should result in further estimated savings of over $500 million.

41062 **(GAO/NSIAD—85-62) Issues affecting appropriations for the African Development Foundation.** (General Accounting Office, Washington, DC (USA). National Security and International Affairs Div.). 7 May 1985. 35p. US General Accounting Office, Box 6015, Gaithersburg, MD 20877. File Number TI85901768.

Report to the Chairman, Subcommittee on Foreign Operations, Committee on Appropriations, United States Senate.

In 1980 the Congress authorized establishment of the African Development Foundation (ADF) to fill the gap between larger US assistance programs and the needs of Africa at the grass roots level. ADF's first year of operations began in fiscal year 1984, but program development efforts came to a virtual standstill in April and May 1984 when its first president and vice president resigned. In June 1984, the Chairman of the Subcommittee on Foreign Operations asked GAO to review the operations of ADF to determine if it has the necessary management capability to efficiently spend more federal dollars and to meet its mandate. GAO conducted its review during July-November 1984 and found that ADF was putting into place the staff and administrative capacity to manage a modest program. However, GAO questions ADF's envisioned program growth to as much as $100 million within the next 5 years. GAO believes ADF should demonstrate the viability of its management and program systems before plans for substantial growth are approved.

41063 **(GAO/NSIAD—85-72) Improved controls needed over waivers of the Armed Services Exchange Regulations.** (General Accounting Office, Washington, DC (USA). National Security and International Affairs Div.). 13 May 1985. 19p. US General Accounting Office, PO Box 6015, Gaithersburg, MD 20877. File Number TI85901771.

Report to the Honorable Steve Symms, United States Senate.

If a base exchange wants to sell items other than those authorized by the Armed Services Exchange Regulations, a waiver can be approved by the Secretary of the service concerned on the grounds that the base is geographically isolated. The Secretary of the Air Force approved a waiver so that the base exchange at Mountain Home Air Force Base could sell certain major home appliances. It is questionable whether the base should still be considered isolated and, therefore, whether there is a continued need for the waiver. Further, GAO found several areas where the internal controls over the granting and revalidation of waivers could be improved. This report makes several recommendations designed to improve these internal controls. DOD agreed with GAO recommendations and has instituted actions to implement them.

41064 **(GAO/NSIAD—85-77) Foreign industrial targeting: US trade law remedies.** Bowsher, C.A. (General Accounting Office, Washington, DC (USA). Office of the Comptroller General). 23 May 1985. 45p. US General Accounting Office, Box 6015, Gaithersburg, MD 20877. File Number TI85901764.

Report to The Congress.

Many US business leaders have been increasingly concerned that foreign industrial targeting, the coordinated government support of specific industries, puts US firms at an unfair disadvantage. However, most nations, including the United States, provide some support. Distinguishing between "fair" and "unfair" targeting practices requires examining the facts of each case. Determining whether US business has been hurt by foreign practices also must be resolved on a case-by-case basis. As mandated by the Trade and Tariff Act of 1984, this report examines issues surrounding foreign industrial targeting and the applicability of current US trade laws. GAO believes that current law provides the opportunity to adequately address foreign targeting practices.

41065 **(INIS-BR—279) Proceedings of the 4. Japan - Brazil Symposium on Science and Technology. Vol. 4.** (Academia de Ciencias do Estado de Sao Paulo (Brazil)). 1984. 221p. (CONF-8408159—Vol.4). NTIS (US Sales Only), PC A10/MF A01. File Number DE85781265.

From 4. Japan-Brazil symposium on science and technology; Rio de Janeiro;Sao Paulo, Brazil (6 Aug 1984).

Individual items in scope for the data base are processed separately.

41066 **Explosively separable casing.** Jacobson, A.K.; Kychnovsky, R.E.; Visbeck, C.N. (to Dept. of Energy). US Patent 4,499,829. 19 Feb 1985. Filed date 8 Mar 1983. vp. PAT-APPL-473177.

An explosively separable casing including a cylindrical afterbody and a circular cover for one end of the afterbody is disclosed. The afterbody has a cylindrical tongue extending longitudinally from one end which is matingly received in a corresponding groove in the cover. The groove is sized to provide a pocket between the end of the tongue and the remainder of the groove so that an explosive can be located therein. A seal is also provided between the tongue and the groove for sealing the pocket from the atmosphere. A frangible holding device is utilized to hold the cover to the afterbody. When the explosive is ignited, the increase in pressure in the pocket causes the cover to be accelerated away from the afterbody. Preferably, the inner wall of the afterbody is in the same plane as the inner wall of the tongue to provide a maximum space for storage in the afterbody and the side wall of the cover is thicker than the side wall of the afterbody so as to provide a sufficiently strong surrounding portion for the pocket in which the explosion takes place. The detonator for the explosive is also located on the cover and is carried away with the cover during separation. The seal is preferably located at the longitudinal end of the tongue and has a chevron cross section.

41067 **(CNEA-NT—10/82) Activities of the Development Branch. 1978-1981.** Candame de Gallo, R.; Marrapodi, M.R.E.; Baez, L.B. (Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Gerencia de Desarrollo). 1982. 183p. (In Spanish). NTIS (US Sales Only), PC A09/MF A01. File Number DE85781322.

The activities carried out by the Development Branch from 1978 through 1981 are summarized. Subjects covered include: Metallurgy, Nuclear Fuels, Instrumentation and Control, Nuclear Reactors, as well as the various projects developed during this period and the administrative and technical activities of various groups belonging to this Branch. A list of publications by personnel of this Branch during the same period is also included.

41068 **(CNEA-NT—18/82) Summary of activities of the Research Branch during 1981.** (Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Gerencia de Investigaciones). Jul 1982. 76p. (In Spanish). NTIS (US Sales Only), PC A05/MF A01. File Number DE85781323.

A general view of the work performed during 1981 by CNEA's Research Branch in basic and applied research is provided. The information includes the main activities and achievements in: 1) Physics Department: Tandar Project; Technical Assistance and Engineering; Experimental and Theoretical Nuclear Physics; Solid State Physics. 2) Reactor Chemistry Department: Chemical Control Division; Moderator and Coolant Physical-Chemistry Division; Radiation Chemistry Division. 3) Radiobiology Department: Radiation Pathology; Cellular Biology; Somatic Effects of the Ionizing Radiations; Genetics; Radiomicrobiology; Bioterium; Irradiation and Dosimetry Section, and, finally, in Biomathematics, Labelled Molecules and Radiochemistry.

41069 **(DOE/EIA—0249(85/1)) Directory of Energy Data Collection Forms. Forms in use as of April 1985.** (USDOE Energy Information Administration, Washington, DC. Office of Statistical Standards). Jul 1985. 42p. NTIS, PC A03/MF A01 - GPO; GPO Dep. File Number DE85015553.

A listing of the energy information gathering forms approved for use by the Department of Energy on April 1, 1985, is provided. For each form, a descriptive abstract and the data collected are given. Also shown are the general energy sources(s) and function(s) covered by the form; the general categories of respondents; the frequency of collection; the public laws and regulations associated with the collection; the requirement for reporting; the name and phone numbers of the data collection manager; and the publications resulting from the data collection. Several indexes to the forms are also provided.

41070 **(DOE/S—0004/1) 1985 Guide to practice and procedure.** (USDOE Board of Contract Appeals, Washington, DC). Jan 1985. 190p. NTIS, PC A09/MF A01; GPO Dep. File Number DE85015535.

DOE contractual arrangements range from complex research and development contracts to loan guaranties and financial assistance agreements. Disputes and appeals which arise in the performance of these agreement when contractors and others disagree with decisions of government officials require resolution. It is for this purpose that the boards were established originally. While the boards have traditionally been concerned with such disputes, the additional authority and responsibilities granted to them under the CDA underline the crucial role they now occupy in the area of government procurement and related activities. From its inception, the DOE Board of Contract Appeals established a policy favoring rules that would emphasize the need for a prompt, impartial and inexpensive resolution of disputes. Equally important towards realizing this goal is the necessity that contractors, subcontractors and government counsel be aware as fully as possible of their rights and remedies under the contract and the Act, as well as of the rules and procedures issued by the Board to resolve disputes. These factors were the underlying reasons for publishing this Guide.

41071 **(INIS-mf—9487) Philippine Atomic Energy Commission: Annual report 1982.** (Philippine Atomic Energy Commission, Diliman, Quezon City). Feb 1983. 75p. NTIS (US Sales Only), PC A04/MF A01. File Number DE85701686.

Illus. .

This publication enumerates the research and development activities of the Philippine Atomic Energy Commission with priorities geared towards achieving the economic and social upliftment of the Filipinos in the field of agriculture, energy, industry, health and environment. Highlights are summaries of investigations and studies of great importance in crop improvement, animal production, nuclear fuels, nutrition research, not to mention its supportive technology, technical services, nuclear information and public acceptance, and nuclear manpower development.

41072 **(INIS-mf—9488) Philippine Atomic Energy Commission: Annual report 1983.** (Philippine Atomic Energy Commission, Diliman, Quezon City). Jan 1984. 37p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701687.

Illus. .

This publication gives the highlights of the research and development projects of the Philippine Atomic Energy Commission in agriculture and food, nuclear fuels and power system technology, medicine, public health and nutrition, environmental surveillance, supportive basic research, social response to nuclear technology, nuclear licensing and safeguards, supportive technology and international and local linkages including manpower development.

41073 **(INIS-mf—9681) Annual report 1983. [Institute for Energy Technology, Norway].** (Institute for Energy Technology, Kjeller (Norway)). 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781514.

Nuclear power, isotope technology and basic research in physics comprises the nuclear activities of Institute for Energy Technology (IFE), Norway. These activities represented in 1983 about 60% of the gross turnover and use about 50% of the state grant. IFE's nuclear power work is now mainly connected with the Halden reactor, where international collaboration through the OECD Halden Reactor Project enables Norway to carry out ad-

vanced research in central areas of nuclear power technology. The present programme in Halden is concentrated on fuel and safety research, as well as computerbased methods for control and surveillance of reactor installations. An important part of the reactor safety work at IFE is concentrated on Nordic collaboration projects under the direction of the Nordic Coordination Committee for Atomic Energy (NKA). The isotope laboratories activity includes the provision of isotopes, irradiation technology assignements and the development of new products and application methods in the field. Activities within basic research in physics are largely based on the use of neutron beams from the JEEP II reactor for research into the structure and dynamics of solid and liquid materials. The research activity has a broad contact network with Norwegian and foreign research groups. During 1983 IFE continued its countrywide monitoring of radioactive fallout which it began in 1982 as an assignment for the Norwegian Defence Research Establishment. The Committee of IFE's Founders report on IFE's place within Norwegian research was handled by the authorities and interested parties during 1983. This report is seen as an important foundation for IFE's further development and effort. (RF).

41074 **(INS-R—321) Nuclear Physics Group progress report January-December 1982.** Coote, G.E. (ed.). (Department of Scientific and Industrial Research, Lower Hutt (New Zealand). Inst. of Nuclear Sciences). Aug 1983. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85701688.

The work of the Nuclear Physics Group of the Institute of Nuclear Sciences during the period July-December 1981 is described. Installation of the EN-tandem electrostatic accelerator proceeded to the voltage test stage. Highlights of the research programme included nuclear microprobe studies of bone and teeth, and depth profiling of sodium in hydrated obsidian.

41075 **(NUREG/CR—3481-Vol.2) Nuclear power plant personnel qualifications and training: TAPS: the task analysis profiling system. Volume 2.** Jorgensen, C.C. (Oak Ridge National Lab., TN (USA)). Jun 1985. Contract AC05-84OR21400. 235p. (ORNL/TM—9308/V2). NTIS, PC A11/MF A01 - GPO. File Number TI85014906.

This report discusses an automated task analysis profiling system (TAPS) designed to provide a linking tool between the behaviors of nuclear power plant operators in performing their tasks and the measurement tools necessary to evaluate their in-plant performance. TAPS assists in the identification of the entry-level skill, knowledge, ability and attitude (SKAA) requirements for the various tasks and rapidly associates them with measurement tests and human factors principles. This report describes the development of TAPS and presents its first demonstration. It begins with characteristics of skilled human performance and proceeds to postulate a cognitive model to formally describe these characteristics. A method is derived for linking SKAA characteristics to measurement tests. The entire process is then automated in the form of a task analysis computer program. The development of the program is detailed and a user guide with annotated code listings and supporting test information is provided.

41076 **(UCRL—92077-II) Inner/outer iterative methods and numerical Schwarz algorithms - II.** Rodrigue, G.; Saylor, P. (Lawrence Livermore National Lab., CA (USA); Illinois Univ., Chicago (USA)). May 1985. Contract W-7405-ENG-48. 41p. (CONF-8505157—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE85013197.

From IBM conference on vector and parallel computations for scientific computing; Rome, Italy (28 May 1985).

Variants of the numerical Schwarz algorithms for solving elliptic partial differential equations on multiprocessing systems are described and analyzed. The methods are described in terms of domain decomposition techniques and mathematically cast into an inter/outer matrix iteration form. It is shown that under certain matrix nonnegativity conditions that the convergence rate of the global iteration is invariant to the amount of overlap of the subdomains when one inner iteration is taken.

41077 **(ANL/MCS-TM—23) Performance of various computers using standard linear equations software in a Fortran environment.** Dongarra, J.J. (Argonne National Lab., IL (USA)). 15 Jul 1985. Contract W-31-109-ENG-38. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015338.

This note compares the performance of different computer systems while solving dense systems of linear equations using the LINPACK software in a Fortran environment. About 100 computers, ranging from a CRAY X-MP to the 68,000 based systems such as the Apollo and SUN Workstations to IBM PC's, are compared.

41078 **(CONF-8503154—1) Hypercube concurrent computation and virtual time for robotic application.** Barhen, J. (Oak Ridge National Lab., TN (USA)). 1985. Contract AC05-84OR21400. 31p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85009479.

From International conference on robotics research; St. Louis, MI, USA (25 Mar 1985).

The programmatic activities of CESAR, the Center for Engineering Systems Advanced Research, are briefly reviewed. In the concurrent computation area, critical issues related to the control of intelligent machines using hypercube ensembles are outlined. The mapping of task graphs exhibiting structural irregularity and nonlocal communication patterns is discussed and the results of an application to the solution of robot inverse dynamics are given. Finally, the design of a Virtual Time Intelligent Machine Operating System (IMOS/VT) for the ORNL/NCube ensemble computer is presented.

41079 **(CTA-IEAV-NT—027/83) Grassmann algebras.** Garcia, R.L. (Centro Tecnico Aeroespacial, Sao Jose dos Campos (Brazil). Inst. de Estudos Avancados). Nov 1983. 21p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE85701690.

The Grassmann algebra is presented briefly. Exponential and logarithm of matrices functions, whose elements belong to this algebra, are studied with the help of the SCHOONSCHIP and REDUCE 2 algebraic manipulators.

41080 **(DOE/ER/10954—3) Iterative solution and finite element analysis in computational mechanics using supercomputers. Progress report, July 1, 1981-July 31, 1984.** Carey, G.F.; Young, D.M. (Texas Univ., Austin (USA)). 1984. Contract AS05-81ER10954. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85014732.

This study deals with the use of iterative solution algorithms in conjunction with finite element methods for solving partial differential equations arising in mechanics. Some aspects of the work are directed to the question of suitability of classes of techniques for computations on advanced vector and parallel architectures.

41081 **(EGG-M—01285) Potential uses of probabilistic risk assessment techniques for space station development.** Bruske, S.Z.; Wright, R.E.; Geaslen, W.D. (EG and G Idaho, Inc., Idaho Falls (USA); EG and G Space Systems, Titusville, FL (USA)). 1985. Contract AC07-76ID01570. 9p. (CONF-8503153—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85014629.

From Aerospace computer security conference; McLean, VA, USA (20 Mar 1985).

This paper presents the state of the art in probabilistic risk assessment (PRA) techniques used in the nuclear power industry, and discusses how these techniques can be applied to concerns associated with the development of a space station. PRA is valuable for evaluating safety concerns and unwanted events from system conception to final design. Identification of such concerns early in system development is essential to their elimination of mitigation. Once a system design has been chosen, PRA can also yield justification for system changes, for optimizing safety and reliability, and for demonstrating compliance with design and safety goals. The

paper presents basic PRA theory and offers an outline of PRA methodology. It also discusses operator action event trees (OAETs), an advance in PRA techniques, used to examine operator responses to off-normal events. OAETs can also be used to develop staffing and communication requirements and other managerial information. The paper also discusses advantages of applying PRA techniques to the field of space station design, operation, and maintenance. 3 refs., 10 figs.

41082 **(EGG-M—07685) Transistorized multigrid methods. I. Linear elliptic problems on two- and three-dimensional regions.** Shieh, A. (EG and G Idaho, Inc., Idaho Falls (USA)). Mar 1985. Contract AC07-76ID01570. 46p. (CONF-8504100—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85014632.

From 2. Copper Mountain conference on multigrid methods; Copper Mountain, CO, USA (1 Apr 1985).

Suitable combination of mathematical transistors and half-weighting filters gives accurate estimate of local truncation error for moderate size problems with reasonable smooth solutions without up and down cycling. The use of symmetric mathematical transistors is particularly effective for supercomputing.

41083 **(EPRI-NP—2709-CCM-Vol.4) ABAQUS-EPGEN: a general-purpose finite-element code. Volume 4. Systems manual.** Hibbitt, H.D.; Karlsson, B.I.; Sorensen, E.P. (Hibbitt and Karlsson, Inc., Providence, RI (USA)). Jun 1985. 392p. Research Reports Center, Box 50490, Palo Alto, CA 94303. File Number TI85920724.

This document is the Systems Manual for ABAQUS/EPGEN, a general purpose finite element computer program designed specifically to serve advanced structural analysis needs. ABAQUS/EPGEN is a large, modular, software system, made up of libraries of finite elements, constitutive models, arithmetic routines, and executive level routines that control the flow through the program to provide various analysis procedures. ABAQUS has extensive data files which are managed independently from the engineering/modeling code. The program is written in FORTRAN 77, with additional conventions within the language to ensure that the code is readily portable across different computers and operating systems. This includes support of fully single and fully double precision versions. This manual documents the system design of the code, including detailed descriptions of data file contents, and dictionaries of subroutines and common blocks. This outline can help programmers and development engineers understand the structure of the code and its use on different computers and operating systems. The highly sophisticated, nonlinear computer code supports advanced structural analyses for nuclear and fossil fuel power plant designs. The ABAQUS-EPGEN code analyzes such general nonlinear phenomena as fluid-structure interactions, reinforced concrete behavior, thermal stress, fracture mechanics, and high-temperature structural behavior. 18 refs.

From 6. national symposium on radiation dosimetry; Marianske Lazne, Czechoslovakia (28 Nov 1983).

Published in summary form only.

41085 **(INIS-mf—9567) FGM - a flexible gamma-spectrum analysis program for a small computer.** Szekely, G. (Magyar Tudomanyos Akademia, Debrecen. Atommag Kutato Intezete). Jun 1984. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781512.

A general purpose gamma-spectrum analysis program was developed on the basis of old programs written for big computers. The new program was adapted to mini- and microcomputers which can be used near the spot of the measurement. Computing methods to compensate the shorter word length, less memory and slower speed are built in the program and some recent mathematical methods for background and peak determination are applied, too. Detailed description of data processing method, parameter determination, error estimation, program organization, system variables, file organization, input and output formats and hardware requirements are presented. Some test run outputs are coupled.

41086 (INIS-mf—9625, pp 20) **Supplements to Jupiter system software.** Hulka, J.; Kuca, P.; Malatova, I.; Rulik, P. (Institut Hygieny a Epidemiologie, Prague (Czechoslovakia)). Oct 1984. (In Czech). NTIS (US Sales Only), PC A03/MF A01. File Number DE85780928. (CONF-8410254—Absts.).

From IAA '84 - seminar on instrumental activation analysis; Klucenice, Czechoslovakia (29 Oct 1984).

Published in summary form only.

From International lens design conference; Cherry Hill, NJ, USA (10 Jun 1985).

We are developing a Lens Design Program intended to operate without user intervention, and to improve its performace with repeated usage. The methodology and current status will be discussed in this paper. 5 refs., 6 figs.

41088 **(LA-UR—85-2292) Early history of computer simulations in statistical mechanics.** Wood, W.W. (Los Alamos National Lab., NM (USA); Carroll Coll., Helena, MT (USA)). 24 Jun 1985. Contract W-7405-ENG-36. 32p. (CONF-850764—1). NTIS, PC A03/MF A01; GPO Dep. File Number DE85014067.

From International School of Physics on molecular dynamics simulation of statistical mechanical systems; Varenna, Lake Como, Italy (23 Jul 1985).

A history of the early use of the Monte Carlo method is presented.

41089 **(OEFZS-A—0506) Description of the data acquisition software for cement-asbestos machines.** Bochskanl, W.; Stoisser, Ch. (Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.). Mar 1984. 185p. (In German). (MI—63/84). Author, OEFZS, A-2444 Seibersdorf, Austria.

Limited Distribution.

A computer program for PDP8 computer is described which handles the data acquisition for cement-asbestos machines. From these data an extensive report is generated containing production management data.

41090 **(SAND—85-1046C) Fiber optic ring network.** Gossage, S.A. (Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 6p. (CONF-850887—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE85013948.

From SPIE international technical symposium on optical and electro-optical engineers; San Diego, CA, USA (18 Aug 1985).

An optical fiber cable distribution architecture and a ring interface are described. The unique synergism of the ring configuration coupled with a widespread optical fiber cable facility are explored. The ring interface adapts a token passing network of workstations from coaxial cable to 50 micron core, telecommunications type, fiber optic cable. The optical fiber cable links a series of communications centers to as many as 288 optical fibers. The loop distribution of optical fibers forms the backbone for a 6.7 km ring operating at 6 to 12 Mbps.

41091 **(SOL—85-10) Existence of equilibrium prices for a simple planning model.** Hu, H. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jun 1985. Contract AS03-76ER72018. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE85015095.

A linear programming planning model is given with an economic interpretation of the model. (GHT)

41092 **(SOL—85-11) Projected Newton barrier methods for linear programming and an equivalence to Karmarkar's projective method.** Gill, P.E.; Murray, W.; Saunders, M.A.; Tomlin, J.A.; Wright, M.H. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jul 1985. Contract AS03-76ER72018. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE85015096.

We discuss interior-point methods for linear programming derived by applying a logarithmic barrier transformation and performing projected Newton steps for a sequence of barrier parameters. Under cetain conditions, one of these "projected Newton barrier" methods is shown to be equivalent to Karmarkar's (1984) projective method for linear programming. Details are given of a specific barrier algorithm and its practical implementation. Numerical results are given for several nontrivial test problems.

41093 **(Y—2351) Computer-assisted program design.** Young, K.G. (Oak Ridge Y-12 Plant, TN (USA)). 28 Jun 1985. Contract AC05-84OS21400. 27p. NTIS, PC A03/MF A01; GPO Dep. File Number DE85015315.

An automated interactive specification technique that has a mathematical basis is discussed. Two sample applications, a hypothetical environmental monitoring system and data management in an industrial environment, are presented. To give a realistic understanding of this new technique, alternative methods of software specification are discussed. This new technique appears to be particularly suited for large complex systems. 10 refs., 12 figs.

Russian original distributed as INDC(CCP)-207/G.

In Translation of selected papers published in Nuclear Constants, Volume 2(51), Moscow 1983.

The article reviews a hardware/software configuration designed along modular lines for tasks involving graphically presented information, especially suitable for organizing collections of nuclear data.

41097 (INIS-mf—9573-Vol.1, pp 1-23) **Nuclear information and documentation center.** Zamora, P. (Instituto Nacional de Investigaciones Nucleares, Mexico City). 1981. (In Spanish). NTIS (US Sales Only), PC A09/MF A01. File Number DE85781445.

From International training course on the use of radiation and isotopic techniques in soil-plant relationships; Irapuato (Mexico) (3 Nov - 11 Dec 1981).

Described are the activities and services of the Nuclear Information and Documentation Center of the Mexican National Institute of Nuclear Research, among which the most important are: DSI computerized services, compilation of bibliographies and current awareness.

41098 **(PNL—5527) Assurance Program for Remedial Action (APRA) microcomputer-operated bibliography management system.** Stenner, R.D.; Washburn, D.K.; Denham, D.H. (Pacific Northwest Labs., Richland, WA (USA)). Jun 1985. Contract AC06-76RL01830. 68p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE85008763.

Pacific Northwest Laboratory (PNL) provided technical assistance to the Office of Operational Safety (OOS) in developing their Assurance Program for Remedial Action (APRA). The APRA Bibliography Management System (BMS), a microcomputer-operated system designed to file, locate and retrieve project-specific bibliographic data, was developed to manage the documentation associated with APRA. The BMS uses APRABASE, a PNL-developed computer program written in dBASE II language, which is designed to operate using the commercially available dBASE II database software. This document describes the APRABASE computer program, its associated subprograms, and the dBASE II APRA file. A User's Manual is also provided in the document. Although the BMS was designed to manage APRA-associated documents, it could be easily adapted for use in handling bibliographic data associated with any project.

41099 **(SAND—85-0308C) Sandia shock compression database.** Anderson, C.E.; Wilbeck, J.S.; Hokanson, J.C.; Asay, J.R.; Grady, D.E.; Graham, R.A.; Kipp, M.E. (Southwest Research Inst., San Antonio, TX (USA); Sandia National Labs., Albuquerque, NM (USA)). 1985. Contract AC04-76DP00789. 11p. (CONF-850736—29). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE85015141.

From American Physical Society topical conference on shock waves in condensed matter; Spokane, WA, USA (22 Jul 1985).

An authoritative, updatable, and searchable bibliographic database whose topical area is shock compression is currently under development. The database is derived from published scientific articles and reports with current emphasis in the subareas of strength, phase transitions, spall, and stress-volume relations. The content of the cited work is described by keywords which are selected and reviewed by scientific advisors. Keywords are organized to provide major and minor descriptors which summarize the technical content in considerable detail. Details of theoretical and experimental approaches are described and major emphasis is identified. In addition to bibliographic information, abstracts are also included, and a field is provided for figure captions and table headings.

9904 Law

41100 **(INIS-mf—9689) Sim and Ritchie's summary of the law relating to atomic energy and radioactive substances.** Grazebrook, D.; Turner, M. (UKAEA Headquarters, London). Dec 1984. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781492.

The law is summarised under the headings: the Common Law; the Legislation; Regulations under the Factories Act 1961; Regulations relating to educational establishments; Regulations and Orders relating to food and medicines; Regulations, Rules, etc. affecting the transport of radioactive materials; Regulations under the Social Security Act 1975; control of import and export; the Euratom Treaty; important non-statutory Codes of Practice, etc.; international Conventions, Regulations, etc. relating to the peaceful use of atomic energy and radioactive substances, in which the United Kingdom is interested; foreign legislation. (U.K.).

41101 **(INIS-mf—9725) Atomic Energy Amendment Act (No. 2) 1980 No. 119 of 1980.** (International Atomic Energy Agency, Vienna (Austria)). 11 Sep 1980. 3p. NTIS (US Sales Only), PC A02/MF A01. File Number DE85781509.

This Act amends those provisions of the Atomic Energy Act 1953 concerning the manner in which the Australian Atomic Energy Commission can deal in securities or borrow money. (NEA).

41102 **(INIS-mf—9726) Radioactive Substances and Irradiating Apparatus Regulations 1962-1979 (South Australia).** (International Atomic Energy Agency, Vienna (Austria)). 6 Jun 1980. 45p. NTIS (US Sales Only), PC A03/MF A01. File Number DE85781493.

These regulations are a consolidation of regulations made under the Health Act 1935-1978, which cover such topics as licensing, registration and record-keeping procedures, prevention of injury by radiation and methods of storage, labelling, transport and packaging of radioactive substances. (NEA).

9905 Civilian Defense

41103 **(ORNL/TM—9411) Provision of shelter for critical workers: potential social issues and policy options.** Schweitzer, M.; Rickert, L.W. (Oak Ridge National Lab., TN (USA)). Jul 1985. Contract AC05-84OR21400. 54p. NTIS, PC A04/MF A01; GPO Dep. File Number DE85015055.

Two major types of social issues are discussed: (1) adoption issues, which focus on the process by which individuals choose to adopt an innovation such as the construction or use of critical worker shelter; and (2) infrastructure issues, which address those institutions and organizations that provide the goods and services needed to facilitiate adoption. A number of tentative policy options are suggested for addressing these potential social issues. These options are organized by four basic categories of action: (1) education and persuasion; (2) provision of goods and services; (3) use of tax incentives; and (4) regulation. Most of these policies can be established by the federal government to encourage public and private sector critical facilities (or critical workers themselves) to provide necessary shelter, but some could also be enacted by employers attempting to get critical workers to construct individual shelters at home. Should federal civil defense planners decide that the available evidence indicates that the practical difficulties associated with a critical worker shelter program can be overcome at an acceptable cost, then further research in this area is in order. Not only is more information necessary concerning the adoption and infrastructure issues identified here, but research is also needed on major societal issues to help determine if a critical-worker shelter program is in the best interest of society as a whole.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Planning for energy self-reliance: a case study of the District of Columbia, 19:39437 (R;US)
Institute of Gas Technology, Chicago, IL (USA)
Experimental program for the development of an advanced wet carbonization process. Project 61070 topical Phase I report, August 12, 1983-December 31, 1984, 19:38693 (R;US)

Institute of Nuclear Physics, Krakow (Poland)
Anticipated radiological hazard in the AIC-144 cyclotron, 19:39793 (R;PL;In Polish)
Institute of Oceanographic Sciences, Godalming (UK)
Assessment of biological processes close to the sea bed in a slope region and its significance to the assessment of sea bed disposal of radioactive waste, 19:38898 (R;GB)
Institut Franco-Allemand de Recherches de Saint-Louis, 68 (France)
Studies of the Bauer piezoelectric polymer gauge (PVF_2) under impact loading, 19:40095 (R;US)
Institut National des Sciences Appliquees (INSA), 31 - Toulouse (France)
Waste water treatment in an anaerobic fluidized bed reactor with immobilized cells, 19:39466 (R;FR;In French)
Instituto de Fisica Teorica, Sao Paulo (Brazil)
Crystalline and amorphous solid phases in the classical hard sphere system, 19:40918 (R;BR)
2-d N=1 and 4-d N=2 Yang-Mills SUSY models on the lattice, 19:40621 (R;BR)
Fractionization of the Witten index in some soluble models, 19:40620 (R;BR)
Infrared dimensional meromorphy of the massless lambda phi 4 model, 19:40619 (R;BR)
Lattice supersymmetry for N=4 Yang-Mills Model, 19:40618 (R;BR)
Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)
Synergistic effect in the solvent extraction of some trivalent lanthanides. 1. Behaviour of the elements La and Yb in the HTTA-TBP, HTTA-HDEHP, HDEHP-TBP systems, 19:39672 (R;BR)
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores, 19:39120 (R;BR;In Portuguese)
Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil)
Composition profile determination in isomorphous binary alloys, 19:39522 (R;BR;In Portuguese)
2-D impurity states associated with inversion layers, 19:39771 (R;BR)
Impurity states in two-and three-dimensional disordered systems, 19:39615 (R;BR)
Microwave and X-Ray emission during a isentropic expansion and its application to solar bursts, 19:40400 (R;BR;In Portuguese)
Observations of galactic center for annihilation line at 0.511 MeV, 19:40402 (R;BR)
Oscillator phenomena in the solar atmosphere and radiation modulation in microwaves, 19:40401 (R;BR;In Portuguese)
Pb /sub 1-x/ Sn /sub x/ Te monocrystal growth by vapor phase transport, with formation of a liquid/solid growth interphase, 19:39521 (R;BR;In Portuguese)
Use of hydrazine as an alternate source of energy, 19:38988 (R;BR)
Instituto Militar de Engenharia, Rio de Janeiro (Brazil)
Calculation of pressure drop and flow redistribution in the LMFBR core, 19:39149 (R;BR;In Portuguese)
Evaluation and reffinement of the neutronic calculation methodology, 19:39176 (R;BR;In Portuguese)
Instituto Nacional de Investigaciones Nucleares, Mexico City
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40236 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40237 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40254 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40260 (R;MX;In Spanish)
International training course on the use of the radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40251 (R;MX;In Spanish)
Institutt for Energiteknikk, Halden (Norway). OECD Halden Reaktor Projekt
OECD Halden Reactor Project. 1958-1983, 19:39229 (R;NO)
Institutul de Fizica si Inginerie Nucleara, Bucharest (Romania)
Contributions to atomic microdynamics study in some liquid metals by means of soft neutrons scattering, 19:39520 (R;RO;In Romanian)
Control organization in data storage systems for nuclear physics, 19:40075 (R;RO;In Romanian)
Crystal field and magnetocrystalline anisotropy in various crystalline systems, 19:40450 (R;RO;In Romanian)
Intensive beam dosimetry of accelerated electrons of low energy, 19:40449 (R;RO;In Romanian)
Magnetic, electric and optic properties of liquid crystals, 19:39612 (R;RO;In Romanian)
Study of the deviation influence from the lattice upon the transport properties providing equilibrium and non-equilibrium conditions, 19:39613 (R;RO;In Romanian)
Study of Xe poisoning effect on fuel displacement strategies in a nuclear electric plant equipped with a natural uranium - heavy water reactor, 19:39144 (R;RO;In Romanian)
International Atomic Energy Agency, Vienna (Austria)
1984 Ordinance on nuclear activities (1984:14), 19:38955 (R;XA)
Act of 14 July 1983 amending Act of 29 March 1958 relating to the protection of the population against the hazards of ionizing radiation, 19:40903 (R;XA;In French and English)
Atomic Energy Amendment Act (No. 2) 1980 No. 119 of 1980, 19:41101 (R;XA)
Breeder accelerators: overview of some problems, 19:39791 (R;XA)
Code of Practice on Radiation Protection in the Mining and Processing of Mineral Sands (1982) (Western Australia), 19:39399 (R;XA)
Decision in principle of 10 November 1983 on the objectives to be observed in carrying out research, surveys and planning in the field of nuclear waste management, 19:38897 (R;XA)
Decree 3322/1971 of 23 December on the purposes of the National Uranium Enterprise, 19:38829 (R;XA;In Spanish)
Decree 2869/1972 of 21 July approving the Regulations on nuclear and radioactive installations, 19:39163 (R;XA;In Spanish)
Decree No. 83/7405 of 10 November 1983 on the licensing procedure for nuclear installations, 19:39162 (R;XA)
Elimination of Salmonella in froglegs by irradiation. Coordinated programme on factors influencing the utilization of food irradiation processes. Final report for the period 1 November 1980-31 October 1984, 19.40279 (R;XA)
Health physics research abstracts No. 11, 19:40278 (R;XA)
Health (Radiation Safety) Act 1983 (Victoria) No. 9889 of 17 May 1983, 19:40906 (R;XA)
Health (Radiation Safety) (Amendment) Regulations 1984 (Victoria) No. 236 of 10 July 1984, 19:40910 (R;XA)
Health (Radiation Safety) Regulations 1984 (Victoria), No. 191 of 8 May 1984, 19:40907 (R;XA)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40236 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40237 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40254 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40260 (R;MX;In Spanish)
International training course on the use of the radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 19:40251 (R;MX;In Spanish)
Isotopic study of Karst water. Final report for the period 1 April 1981-31 May 1984, 19:40332 (R;XA)
Mines Safety Control (Radiation Protection) Regulations (Northern Territory) No. 30 of 25 September 1981, 19:38956 (R;XA)
Ministerial Order of 31 December 1982 made in implementation of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 19:38853 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 9 of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 19:38856 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 3(2)(a) of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying

radioactive materials in cisterns or vessels, 19:38854 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 8(1) of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 19:38855 (R;XA;In French and Dutch)
Modification of 28 November 1983 of the Radiation Protection ordinance of 30 June 1976, 19:40904 (R;XA;In French)
Modification of radiosensitivity of mammalian cells by means of hyperthermia and chemical agent. Coordinated programme on improvement of cancer therapy by the combination of treatment by conventional radiation and physical or chemical means. Final report for the period 15 October 1982-14 October 1984, 19:40281 (R;XA)
Nuclear theory for applications - 1982. Proceedings of the course on advances in nuclear theory and nuclear data for reactor applications held at Trieste, 25 January-19 February 1982 during the winter college on nuclear physics and reactor jointly organized by the IAEA and the ICTP and held at the ICTP, Trieste, 25 January-26 March 1982, 19:39175 (R;AT)
Order of the Ministry of Labour of 9 March 1971 on health and safety at work. General Ordinance, 19:40911 (R;XA;In Spanish)
Ordinance of 5 December 1983 concerning funds for the decommissioning of nuclear installations, 19:39339 (R;XA;In French)
Ordinance of 18 January 1984 on definitions and licences in the atomic energy field, 19:39159 (R;XA;In French)
Ordinance of 14 March 1983 on the supervision of nuclear installations, 19:39161 (R;XA;In French)
Ordinance of 28 November 1983 on protection in case of emergencies in the neighbourhood of nuclear installations, 19:39160 (R;XA;In French)
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 19:39109 (R;HU)
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 19:39701 (R;XA)
Quality assessment and consistency check of measured nuclear data up to 20 MeV including the range of resonances. Final report for the period 1 May 1982-30 April 1984, 19:40705 (R;XA)
Radiation Safety (General) Regulations 1983 (Western Australia), 19:40908 (R;XA)
Radiation Safety (Qualifications) Amendment Regulations 1984, 19:40909 (R;XA)
Radiation Safety (Qualifications) Regulations 1980, 19:40905 (R;XA)
Radiation Safety (Transport of Radioactive Substances) Regulations 1982, 19:38958 (R;XA)
Radioactive Ores and Concentrates (Packaging and Transport) Regulations 1980 (Northern Territory) No. 30 of 21 July 1980, 19:38957 (R;XA)
Radioactive Substances and Irradiating Apparatus Regulations 1962-1979 (South Australia), 19:41102 (R;XA)
Research in radiation processing dosimetry. Final report of the co-ordinated research programme on high-dose standardization and intercomparison for industrial radiation processing organized by the IAEA and proceedings of the final research co-ordination meeting held in Munich, 8-11 November 1983, 19:40893 (R;AT)
Royal Decree-Law 12/1982 of 27 August regulating State intervention in the Lemoniz nuclear power plant, 19:39128 (R;XA;In Spanish)
Storage properties of irradiated potatoes and onions. Part of a coordinated programme on the Asian Regional Cooperative Project on Food Irradiation. Final report for the period 1 December 1980 - 31 August 1984, 19:40280 (R;XA)

International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit
International bulletin on atomic and molecular data for fusion. No. 27, 19:40969 (R;XA)

International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee
Translation of selected papers published in Nuclear Constants 1(50) 1983, 19:40649 (R;AT)

International Atomic Energy Agency, Vienna (Austria). International Working Group on Fast Reactors
Specialist meeting on mechanical properties of structural materials including environmental effects, Chester, England, 10-14 October 1983, 19:39547 (R;AT)

International Centre for Theoretical Physics, Trieste (Italy)
Augmented space formulation of the optical conductivity of random semiconducting alloys, 19:39507 (R;XA)
Core electron energy loss spectra in metallic La, 19:40867 (R;IT)
Effect of pressure on the bandstructure and superconductivity in lutetium, 19:39509 (R;XA)
Nuclear theory for applications - 1982. Proceedings of the course on advances in nuclear theory and nuclear data for reactor applications held at Trieste, 25 January-19 February 1982 during the winter college on nuclear physics and reactor jointly organized by the IAEA and the ICTP and held at the ICTP, Trieste, 25 January-26 March 1982, 19:39175 (R;AT)
Phonon frequency shifts and the pressure dependence of Tsub(c) in lanthanum, 19:39508 (R;XA)

International Energy Agency Coal Research, London (UK)
Coal research projects: Exploration, mining and preparation, 19:38731 (R;GB)
Coal research projects: properties, conversion and combustion, 19:38720 (R;GB)

International Energy Associates Ltd., Washington, DC (USA)
History of nuclear materials transportation and packaging research and development sponsored by the US federal government. Final report, 19:38859 (R;US)

International Nuclear Law Association (INLA), Brussels (Belgium)
Administrative requirements of financial securities to cover decommissioning operations, 19:39333 (R;BE;In Spanish)
Comparative study of legal limits of safety requirements for nuclear installations, 19:39332 (R;BE)
Control of non-proliferation of nuclear weapons and nuclear development - present uncertainties, 19:39391 (R;BE)
Current assessment and future potential of the international nuclear market, 19:39389 (R;BE)
IAEA and non-proliferation: is quiescence progress, 19:39387 (R;BE)
Legal aspects of nuclear technology transfer in connection with Latin America, 19:39390 (R;BE)
Non-proliferation and nuclear cooperation - accomplishments and challenges, 19:39388 (R;BE)
Political and legal problems of international nuclear supply agreements: the Euratom experience, 19:38863 (R;BE)
Safety assurance for nuclear chemical plants - regulatory practice in the UK, 19:39331 (R;BE)

Iowa Energy Policy Council, Des Moines (USA)
Energy savings from window replacement, 19:39436 (R;US)

Iowa State Commerce Commission, Des Moines (USA)
PURPA Grant Program. Final report, October 1, 1979-January 31, 1982, 19:39407 (R;US)

Iowa State Univ. of Science and Technology, Ames (USA). Energy Extension Service
[Short articles on energy conservation], 19:39429 (R;US)

Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy
Boundary layers as the primary transport regions of the earth's magnetotail. Scientific report 1977-1979, 19:40429 (R;US)

J

Japan Atomic Energy Research Inst., Tokyo
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute (No. 16). April 1, 1982-March 31, 1983, 19:39699 (R;JP)
Carburization of UO_2 kernels in cracked particles and its effect on xenon release, 19:39132 (R;JP)
Conceptual design study on actinide burning fast reactor, 19:39154 (R;JP;In Japanese)
Core design and critical experiment on FCA XI-1 Assembly, 19:39230 (R;JP;In Japanese)
Data of very low wind velocity and of air tracer concentration in the diffusion experiments under very stable condition. September 1976-October 1981, 19:40142 (R;JP;In Japanese)

Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 19:40453 (R;JP)
Data on ionization, excitation, dissociation and dissociative ionization of targets by helium ion bombardments, (1). Target ionization, excitation, dissociation and dissociative ionization induced by several keV to 3.5 MeV helium ions incident on thin gas targets, 19:40452 (R;JP)
Development of partitioning method; partitioning test with nuclear fuel reprocessing waste prepared at PNC, 2, 19:38901 (R;JP;In Japanese)
Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead, 19:40873 (R;JP)
High accuracy measurements of bulk densities of ThO_2 and (Th, U)O_2 microspheres by mercury pycnometry, 19:39705 (R;JP;In Japanese)
High temperature alloys and ceramic heat exchanger, 19:39548 (R;JP;In Japanese)
In-pile test of tritium recovery from lithium oxide. Tritium release behavior, 19:41038 (R;JP;In Japanese)
Intermediate-Level Waste Treatment Facility in the Tokai Research Establishment, 19:38900 (R;JP;In Japanese)
Iodine-initiated, solid-state copolymerization of tetraoxane with 1,3-dioxolane in the presence of methylal, 19:39597 (R;JP;In Japanese)
Irradiation effect on the reaction of mixture of carbon monoxide and hydrogen, (3). Radiation chemical reaction at elevated pressure under gas circulation, 19:39698 (R;JP;In Japanese)
Laser spectroscopy of U and UF_6, 19:39704 (R;JP)
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 19:39596 (R;JP;In Japanese)
Recirculation pump suction line 2.8% break integral test at ROSA-III with HPCS failure, RUN 984, 19:39343 (R;JP)
Report of the 2nd workshop on particle material interactions for fusion research, 19:41037 (R;JP;In Japanese)
SPEEDI: system for prediction of environmental emergency dose information, 19:39342 (R;JP;In Japanese)
Stopping power for ions in solids, 19:40872 (R;JP;In Japanese)
Study on the experimental method of chlorine treatment of raw drinking water, 19:40187 (R;JP;In Japanese)
Treatment of liquid waste from the production of molybdenum-99 by $^{235}U(n, f)$ ^{99}Mo reaction, 2. Method for treating medium level liquid waste, 19:38899 (R;JP;In Japanese)

JAYCOR, San Diego, CA (USA)
Tests of an explosive-driven coaxial generator, 19:39780 (R;US)

Jet Propulsion Lab., Pasadena, CA (USA)
Proceedings of the Flat-Plate Solar Array Project Research Forum on the high-speed growth and characterization of crystals for solar cells, 19:39000 (R;US)

Joint FAO/IAEA Div. of Isotope and Radiation Applications of Atomic Energy for Food and Agricultural Development, Vienna (Austria)
Radiotracer studies of bound pesticide residues in soil, plants and food. Report of a research co-ordination meeting on isotopic tracer-aided studies of unextractable or bound pesticide residues in soil, plants and food organized by the Joint FAO/IAEA Division of Isotope and Radiation Applications of Atomic Energy for Food and Agricultural Development and held in Neuherberg, 11-15 July 1983, 19:40166 (R;AT)

Joint Inst. for Nuclear Research, Dubna (USSR)
11. International symposium on nuclear electronics, 19:39779 (R;SU)
2^{-} resonances in the $\pi^{+}\pi^{-}\pi^{-}$ systems, 19:40530 (R;SU)
Optical filtration of laser track shadowgrams in streamer chamber, 19:40029 (R;SU)
Proceedings of the 8. All-union conference on the charged particle accelerators. Volume 1, 19:39792 (R;SU;In Russian)
Role of gravitation in the existence of an electric charge and its magnetic moment. Dynamics, 19:40938 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Dept. of New Acceleration Methods
Investigation of the SILUND-20 electron linear induction accelerator beam, 19:39814 (R;SU;In Russian)
Nonlinear theory of relativistic electron beam interaction with a slow electromagnetic wave, 19:39813 (R;SU;In Russian)
Numerical simulation of electron-ion beam dynamics, 19:39812 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation
Hardware for the operator-computer dialogue in the AEhLT-2/160 system on-line with the SM-4 computer, 19:39772 (R;SU;In Russian)
Investigation of characteristics of proportional chambers filled with some gaseous mixtures, 19:40001 (R;SU;In Russian)
Production of meson pairs with large transverse momenta in hadron-nuclear interactions, 19:40591 (R;SU;In Russian)
Six- and eight-dimensional gluon condensates from lattice QCD, 19:40628 (R;SU)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
Analysis of V^{0}-events registered in the streamer spectrometer SKM-200, 19:40028 (R;SU)
Coherent bremsstrahlung from 10 GeV positrons in thin Si crystal, 19:40874 (R;SU;In Russian)
Deuterium track sensitive target in a working volume of hydrogen bubble chamber, 19:39998 (R;SU;In Russian)
Dubna synchrophasotron. Performance and improvement (quarter 1, 1984), 19:39795 (R;SU;In Russian)
Gas threshold Cherenkov 14-channel counter, 19:39990 (R;SU;In Russian)
Holographic bubble chamber in a proton beam, 19:40037 (R;SU;In Russian)
Light output as a function of ionization density for a scintillator on polysterene basis, 19:39993 (R;SU;In Russian)
Measurement of polarization in the $\pi^{-}p \rightarrow \pi^{0}n$, $\pi^{0} \rightarrow 2\gamma$ reaction at the momentum of 40 GeV/c with detection of all reaction products, 19:40531 (R;SU;In Russian)
Multichannel threshold gas Cherenkov counter placed in the spectrometric magnetic of the BIS-2 facility, 19:39992 (R;SU;In Russian)
Nonlinear theory of relativistic electron beam interaction with a slow electromagnetic wave, 19:39813 (R;SU;In Russian)
Program of geometric reconstruction for the Lyudmila facility with internal track-sensitive target, 19:39987 (R;SU;In Russian)
Some performance of plastic streamer tubes, 19:40003 (R;SU;In Russian)
Technical cryogenic thermometers on the basis of commercial TVO resistors, 19:39724 (R;SU;In Russian)
Three-dimensional simulation of magnetic system elements of JINR superconducting synchrotron, 19:39794 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Gamma-irradiation and neutron effect on DNA-membrane complexes of mammalian cells, 19:40289 (R;SU;In Russian)
Modulation of ultracold neutron flux by means of thin-film ferromagnetic shutter, 19:40032 (R;SU;In Russian)
Search for the phonon analog of Cherenkov radiation at the neutron passage flight through matter, 19:40876 (R;SU;In Russian)
Software for data acquisition system of the DN-2 diffractometer at the IBR-2 pulsed reactor, 19:40034 (R;SU;In Russian)
Thermal neutron scattering in MBBA and EBBA solid phases, 19:40877 (R;SU;In Russian)
To calculation of a neutron adiabatic spin-flipper, 19:40082 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Amplifier-pulse shaper with symmetric feedbacks for drift chambers, 19:39994 (R;SU;In Russian)
Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions, 19:40596 (R;SU;In Russian)
Automatic search-lock-track circuit of a nuclear magnetometer, 19:40080 (R;SU;In Russian)
Charge collection time effecting energy and time resolution of semiconductor detectors, 19:39997 (R;SU;In Russian)
Detection and analysis of neutrino interactions with nuclei in photoemulsion at IHEP accelerator (Serpukhov), 19:40529 (R;SU;In Russian)
Differential cross section of the $\pi^{+}p \rightarrow K^{+}\Sigma^{+}$ (1385) reacton at 12 GeV/c, 19:40533 (R;SU;In Russian)
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 19:40456 (R;SU)
Electrodeless drift chamber in particle fluxes more than $10^{5}s^{-1}$ per wire, 19:39995 (R;SU;In Russian)
Experimental study on the $\pi^{+}p \rightarrow K^{+}\Sigma^{+}$ reaction at 12 GeV/c, 19:40532 (R;SU;In Russian)

Flat problem of the linear transport theory for uniform semispace and Mnatsakanjan semigroup method, 19:40875 (R;SU)
High-resistance low-noise resistor for spectrometers with a cooled semiconductor detector, 19:40089 (R;SU;In Russian)
Liquid tritium target with temperature variation in the 20.6 < T < 40 K range, 19:39857 (R;SU;In Russian)
Magnetometer for the magnet measurement complex at the JINR phasotron, 19:40081 (R;SU;In Russian)
Medium-size polarized deuteron target, 19:39854 (R;SU;In Russian)
Monte-Carlo simulation for the showers in the DELPHI (LEP) hadron calorimeter, 19:40030 (R;SU)
Multi-prong star detection efficiency in a streamer chamber triggered by a hodoscopic detector, 19:39999 (R;SU;In Russian)
Preliminary investigations of the JINR phasotron beam spill system, 19:39856 (R;SU;In Russian)
Problem of self-quenching streamer and limited-Geiger modes in wire detectors, 19:40035 (R;SU;In Russian)
QCD sum rules of the finite energy type, 19:40592 (R;SU;In Russian)
Scintillation time-of-flight spectrometer on-line with KM 001 microcomputer and SM-3 minicomputer, 19:40000 (R;SU;In Russian)
Sensitivity of experiment on search for neutrinoless double beta-decay by using semiconductor detectors, 19:40033 (R;SU;In Russian)
Shock tensometer for multiwire chambers, 19:40036 (R;SU;In Russian)
Single computer variant of software for accurate measurement of JINR phasotron subsystem parameters, 19:39796 (R;SU;In Russian)
Spectrometer for investigation of perturbed gamma-gamma angular correlations with three Ge(Li) detectors and two analog-to-digital converters on-line with SM-3 computers, 19:39988 (R;SU;In Russian)
Spectrometric amplifiers, 19:40079 (R;SU;In Russian)
Technique and results of spectroscopy amplifiers testing for semiconductor nuclear radiation detectors, 19:39989 (R;SU;In Russian)
Testing technique for streamer tubes of the DELPHI (LEP) hadron calorimeter, 19:40027 (R;SU;In Russian)
Time performance investigation of the spectrometer with a planar HPGe detector, 19:39991 (R;SU;In Russian)
Time-of-digit converter with nanosecond resolution, 19:39996 (R;SU;In Russian)
Wide-gap drift chamber with field-forming electrodes on fibreglass, 19:40031 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions

Cryogenic current leads with a braiding heat exchanger, 19:39725 (R;SU;In Russian)
Experimental data registration system of DEMAS-MULTI setup, 19:39986 (R;SU;In Russian)
Heavy ion cyclotron facility of the Laboratory of Nuclear Reactions of JINR, 19:39845 (R;SU;In Russian)
Investigation of ion beam extraction from the U-400 cyclotron by the stripping method, 19:39844 (R;SU;In Russian)
LIDIA high-sensitivity mass spectrometer, 19:40088 (R;SU;In Russian)
Study on characteristics of valves for pulsed gas feed into a cyclotron multicharged ion source, 19:39855 (R;SU;In Russian)
System for automation of experiments on the search for rare nuclear decay events by detecting multiple neutron emission, 19:40038 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics

About quantum energy-momentum tensor for the Thirring model, 19:40631 (R;SU;In Russian)
Analysis of experimental semi-inclusive distributions at the SPS collider energies, 19:40594 (R;SU;In Russian)
Covariant Bogolyubov transformation and quantum excitation of real solitons, 19:40937 (R;SU;In Russian)
Description of π meson structure functions in a relativistic theory of bound states, 19:40593 (R;SU;In Russian)
Dynamic origin of Wess-Zumino massless model, 19:40625 (R;SU)
Flat problem of the linear transport theory for uniform semispace and Mnatsakanjan semigroup method, 19:40875 (R;SU)
Formulation of euclidean QED manifestly obeying conditions of gauge, translational and rotational invariance, 19:40627 (R;SU)
Hybrid model of the chiral field and relativistic string, 19:40632 (R;SU;In Russian)
New procedure for finite-dimensional approximations of path integrals, 19:40629 (R;SU;In Russian)
No anomaly is observed, 19:40626 (R;SU)
$Q_1 \rightarrow K(p,\omega)$ decays of Q_1-meson, 19:40595 (R;SU;In Russian)
Relativistic covariant single-time equation for $(\pi\mu)$ atom, 19:40457 (R;SU;In Russian)
Stochastic quantization of Abelian fields, 19:40630 (R;SU;In Russian)
Vacuum problem in the Schwinger model, 19:40624 (R;SU)

Jones (William A.) and Associates, Lotus, CA (USA)

[Field testing of enhanced recovery pump for petroleum]. First quarter research summary, 19:38788 (R;US)

Zurich Univ. (Switzerland)
p anti p annihilations at rest in hydrogen gas: report on preliminary results of the ASTERIX experiment at LEAR, 19:40501 (R;CH)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

ACES
See QUARKS

ACETALDEHYDE
Chemical Reaction Kinetics
Rate constants for the reaction of hydroxyl radicals with acetaldehyde from 244—528 K, 10:39696 (J;US)

ACETALS
Copolymerization
Iodine-initiated, solid-state copolymerization of tetraoxane with 1,3-dioxolane in the presence of methylal, 10:39597 (R;JP;In Japanese)

ACETIC ALDEHYDE
See ACETALDEHYDE

ACETONE
Biosynthesis
Agitation and pressure effects on acetone-butanol fermentation (Clostridium acetobutylicum), 10:38987 (J;US)

ACETYLENE
Combustion Kinetics
Laser fluorescence studies of the detailed flame chemistry of nitrogen, sulfur, and carbon. Final technical report, March 1, 1982-May 31, 1983, 10:39709 (R;US)
Infrared Spectra
Identification of atmospheric C_2H_2 lines in the 3230-3340 cm^{-1} region of high resolution solar absorption spectra recorded at the National Solar Observatory, 10:40134 (J;US)

ACID ELECTROLYTE FUEL CELLS
Anodes
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
Cathodes
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
Fabrication
Phosphoric and electric utility fuel cell technology development. Technical progress report No. 14 for quarter ending June 1984, 10:39425 (R;US)
Performance Testing
Phosphoric and electric utility fuel cell technology development. Technical progress report No. 14 for quarter ending June 1984, 10:39425 (R;US)
ACID PHOSPHATES
Phase Transformations
Structural study of the high-pressure antiferroelectric phase of CsH_2PO_4, 10:39604 (R;US)
ACID RAIN
State of California perspective on NO/sub x/ control for stationary sources, 10:40151 (RA;US)
Environmental Effects
Regional perspective on aquatic effects of acid deposition, 10:40182 (R;US)
Environmental Impacts
Chemical processes in forest soils. Progress report, August 1, 1984-July 1, 1985, 10:40161 (R;US)
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)
Environmental Policy
Acid rain issues, 10:40150 (RA;US)
Monitoring
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)
Research Programs
Chemical processes in forest soils. Progress report, August 1, 1984-July 1, 1985, 10:40161 (R;US)
ACQUISITION (DATA)
See DATA ACQUISITION
ACRIDINES
Hydrogenation
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)
ACRYLAMIDE
Chemical Reaction Kinetics
Subthreshold generation of free radicals in shock-loaded organic solids, 10:39695 (R;US)
ACTINIDE BURNER REACTORS
Design
Conceptual design study on actinide burning fast reactor, 10:39154 (R;JP;In Japanese)
Feasibility Studies
Conceptual design study on actinide burning fast reactor, 10:39154 (R;JP;In Japanese)
ACTINIDE NUCLEI

ACTINIUM D
See LEAD 207
ACTINIUM ISOTOPES
Fission Fragments
Investigation of the pre-actinide nucleus fission, 10:40853 (RA;SU;In Russian)
ACTIVATION ANALYSIS
Calibration Standards
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Use of aerosol standard in quality testing of instrumental neutron activation analysis results, 10:39652 (RA;CS;In Czech)
Sensitivity
Neutron activation analysis, 10:39651 (RA;MX;In Spanish)
ACTIVATION DETECTORS
Use of activation detectors for low neutron flux densities, 10:39930 (RA;CS;In Czech)
ADAPTIVE INTRUSION DATA SYSTEMS
See INTRUSION DETECTION SYSTEMS
ADENOCARCINOMAS
See CARCINOMAS
ADIABATIC TOROIDAL COMPRESSORS
See ATC DEVICES
ADRENAL GLANDS
Scintiscanning
^{131}I-3-iodobenzylguanidine (^{131}I-3-IBG) as a scintigraphic agent for the visualization of adrenal medulla tumors, 10:39702 (R;NO)
ADSORBENTS
Dielectric Properties
Kinetics of sulfur and nitrogen reactions in combustion systems. Quarterly report No. 1, 10:39100 (R;US)
Sorbent sulfation kinetics (MIT), 10:38716 (RA;US)
Sorptive Properties
Kinetics of sulfur and nitrogen reactions in combustion systems. Quarterly report No. 1, 10:39100 (R;US)
ADSORPTION
Reaction Kinetics
Research highlights subsurface transport program. Physical-chemical mechanisms affecting transport of inorganic/organic microcontaminants in heterogeneous systems, 10:40183 (R;US)
ADVANCED THERMAL REACTOR FUGEN
See JATR REACTOR
AERIAL MONITORING
Gamma Spectrometers
Theoretical calibration of aerial spectrometer for accident dosimetry of nuclear power plant vicinity, 10:39936 (RA;CS;In Czech)
AFRICA
See also LIBERIA
Financial Assistance
Issues affecting appropriations for the African Development Foundation, 10:41062 (R;US)
AFTERSHOCKS
Monitoring
Source parameters of Coalinga aftershocks from a UC Berkeley temporary digital array, 10:40372 (RA;US)

AGRICULTURE
Irrigation
Sensitivity analysis of conservation opportunities in the irrigated agriculture sector of the Pacific Northwest, 10:39465 (R;US)
Isotope Dilution
Isotopic techniques in studies of soil fertility and minerals as plant nutrients, 10:40259 (RA;MX;In Spanish)
Tracer Techniques
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40254 (R;MX;In Spanish)
International training course on the use of the radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40251 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40260 (R;MX;In Spanish)
AIC-144 CYCLOTRON
See CRACOW AIC-144 CYCLOTRON
AIR
See also SURFACE AIR
Beam Transport
Laser-based foilless diode, 10:39824 (R;US)
RADLAC II lead pulse stability, 10:39825 (R;US)
Neutron Dosimetry
Investigation of radiation dose fields from the fast neutron beams obtained from d(50 MeV) → Be reaction, 10:40912 (RA;SU;In Russian)
AIR FILTERS
Efficiency
Removal of airborne particulate radioactivity under accident conditions, 10:39240 (R;DE)
Performance Testing
Improved quality assurance testing of respirator filters, 10:39726 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Remote Sensing
Hydrogen chloride measurements with a DAS lidar in the marine atmosphere, 10:40129 (R;DE)
State-of-the-art DAS lidar for SO_2 and NO_2, 10:40130 (R;DE)
AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Economics
Deregulation in environmental policy, 10:40200 (R;DE;In German)
AIR POLLUTION MONITORS
Electrolytic Cells
Development of a stationary carbon monoxide detector, 10:39786 (R;DE;In German)
AIR QUALITY
Prevention of Significant Deterioration
EPA's delegation of responsibilities to prevent significant deterioration of air quality: how is it working, 10:40147 (R;US)
Standards
Development and revision of air quality standards with special attention to the NO_2 standard review, 10:40149 (RA;US)
AIR WALL IONIZATION CHAMBERS
See BRAGG GRAY CHAMBERS
AIRBORNE PARTICLES
See PARTICULATES
AIRBORNE PARTICULATES

Fault Tree Analysis
CANDU alarm sequence analysis following abnormal incidents, 10:39326 (RA;HU)
Monitoring
Interior sensor and environment monitor, 10:38966 (R;US)
Specifications
Abnormal event operator aids in CANDU nuclear power stations, 10:39323 (RA;HU)
ALASKA
Continental Shelf
US capability to support ocean engineering in the Arctic, 10:38785 (R;US)
ALBERTA
Oil Sand Deposits
Methods of enhancing fluid communication in oil sands, 10:38810 (RA;US)
ALCATOR DEVICE
Plasma Diagnostics
Spectrum and propagation of lower-hybrid waves in a tokamak plasma, 10:41003 (J;US)
ALFVEN WAVES
Ballooning Instability
High-n ideal and resistive shear Alfven waves in tokamaks, 10:41009 (J;US)
ALGAE
See also UNICELLULAR ALGAE
Radiation Monitoring
Assessment of radioactivity in the environs of a titanium dioxide plant at Bunbury, Western Australia, 10:40193 (R;AU)
ALGEBRA
Grassmann algebras, 10:41079 (R;BR;In Portuguese)
ALLOY-HD-8077
See NICKEL BASE ALLOYS
ALLOY-IN-100
Corrosion Protection
Study of the corrosion of superalloys protected by coatings: role of impurities and stresses). Final report, 1 October 1984-1 October 1985, 10:39554 (R;FR;FR)
ALLOY-MA-754

Corrosion
Marine corrosion. Final report, 10:39479 (R;US)
X-Ray Diffraction
Synchrotron radiation and x-ray topography. Part II. Examples of some applications, 10:39496 (R;US)
X-Ray Emission Analysis
Metallurgical applications of x-ray microanalysis, 10:39512 (RA;CA)
ALLOY-TZM
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

ALLOY-WAZ-16
See NICKEL BASE ALLOYS
ALLUVIAL DEPOSITS
Permeability
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
Radionuclide Migration
In situ gaseous tracer diffusion experiments and predictive modeling at the Greater Confinement Disposal Test, 10:38878 (R;US)
ALPHA DETECTION
Dielectric Track Detectors
Solid-state track detector response to high-energy charged particles, 10:39938 (RA;CS;In Czech)
Thermoluminescent Dosemeters
Thermoluminescent detector response to high-energy charged particles, 10:39939 (RA;CS;In Czech)
ALPHA DOSIMETRY
Thermoluminescent Dosemeters
Dosimetric energy response of $CaSO_4$; Dy thermoluminescence dosimeters to alpha particles, 10:39887 (R;EG)
ALPHA PARTICLE MODEL
See CLUSTER MODEL
ALPHA PARTICLES
Emitted by nuclei.
Dosimetry
Studies on alpha track formation in cellulose nitrate solid state detectors using scanning electron microscopy, 10:40274 (RA;US)
Particle Production
Escape of light charged particles and interaction of heavy ions with nuclei, 10:40845 (RA;SU;In Russian)
ALPHA REACTIONS
Direct Reactions
Direct and exchange processes in alpha reactions on light nuclei, 10:40685 (RA;SU;In Russian)
Elastic Scattering
Realistic effective interaction for nucleus - Nucleus collision, 10:40807 (RA;FR)
Exchange Interactions
Direct and exchange processes in alpha reactions on light nuclei, 10:40685 (RA;SU;In Russian)
Fission
Determination of energy dependence on unresolved resonance density, 10:40782 (RA;SU;In Russian)
Study on probability of the actinide nuclei fission by 40-80 MeV α-particles, 10:40792 (RA;SU;In Russian)
Inelastic Scattering
Effect of population of the magnetic substates of the 2^+_1 level on alpha particle inelastic scattering, 10:40706 (RA;SU;In Russian)
Identification of an internal-wave contribution to inelastic scattering, 10:40710 (RA;FR)
Knock-Out Reactions
Description of nuclear reaction product spectra and excited nuclei temperature, 10:40759 (RA;SU;In Russian)
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Particle Production
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Potential Scattering
Contribution of exchange processes in α-particles elastic scattering on light nuclei, 10:40687 (RA;SU;In Russian)
Stripping
Calculation of angular correlation function and spin-tensors of the density matrix in the $^{11}B(\alpha, t_1\gamma)^{12}C$ reaction, 10:40686 (RA;SU;In Russian)
Total Cross Sections
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
ALPHA SPECTROMETERS
Automation
Automatic α-spectrometry using surface barrier detectors, 10:40048 (R;DD;In German)
Surface Barrier Detectors
Automatic α-spectrometry using surface barrier detectors, 10:40048 (R;DD;In German)
ALPHA-BEARING WASTES
Radioactive Waste Disposal
Preliminary evaluation of criteria for the disposal of transuranic contaminated waste, 10:38877 (R;US)
Radioactive Waste Storage
Savannah River Interim Waste Management Program Plan, FY 1985, 10:38879 (R;US)
Transuranic waste: long-term planning, 10:38935 (R;US)
ALPHA-TRANSFER REACTIONS
Form Factors
Phenomenological parametrization of alpha-transfer form factors, 10:40742 (RA;SU;In Russian)
ALTERNATE FUELS
See FUEL SUBSTITUTION
SYNTHETIC FUELS
ALUMINIA
See ALUMINIUM OXIDES
ALUMINIUM
Activation Analysis
Construction of a facility for 14 MeV neutron activation analysis of oxygen in aluminium, 10:39678 (R;NO)
Shielding considerations and design of a set up for on-line determination of aluminium in bauxite ore using activation analysis with Am-Be neutron source, 10:39911 (RA;BR)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Measurement of transition radiation from medium-energy electrons, 10:40883 (J;US)
Compression
Chemical synthesis under shock compression, 10:39559 (R;US)
Equations of State
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Pion Minus Reactions
Compton effect on πp meson, 10:40519 (R;SU;In Russian)
Positron Collisions
2D ACAR momentum density study of the nature of the positron surface state on Al(100), 10:39481 (R;US)
Shock Waves
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Strain rate dependence in steady, plastic shock waves, 10:39561 (R;US)
Stresses
Effects of microstructure on the acoustoelastic measurements of stress, 10:39523 (R;US)
Superconductivity
Resistance measurements and vortex fluctuations in two-dimensional superconducting films, 10:39577 (J;US)
Ultrasonic Waves
Effects of microstructure on the acoustoelastic measurements of stress, 10:39523 (R;US)
ALUMINIUM 26
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
ALUMINIUM 27 TARGET
Alpha Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Argon 40 Reactions
Direct transfer reactions induced by 1760 MeV ^{40}Ar beam on ^{27}Al target nucleus, 10:40701 (RA;FR)
Neon 20 Reactions
Fragment production in the $^{20}Ne+^{27}Al$ system at 30 MeV/A, 10:40703 (RA;FR)

Oxygen 16 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)
Sulfur 32 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)

ALUMINIUM ALLOYS
See also ALLOY-IN-100
ALUMINIUM BASE ALLOYS
HEUSLER ALLOYS
Chemisorption
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report, January-December 1984, 10:39555 (R;US)
Electronic Structure
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report, January-December 1984, 10:39555 (R;US)
Explosive Forming
Shock-wave synthesis of titanium aluminides, 10:39560 (R;US)
Synthesis of nickel-aluminum alloys by shock compression of composite particles, 10:39591 (R;US)
Magnetic Properties
Itinerant electron ferromagnetism in Fe-alloyed, Ni_3Al based materials, 10:39493 (R;US)
Mass Transfer
Electron nuclear gamma resonance spectroscopy for studying mass transfer in solids, 10:40720 (RA;SU;In Russian)
Phase Studies
Shock-wave synthesis of titanium aluminides, 10:39560 (R;US)
Synthesis of nickel-aluminum alloys by shock compression of composite particles, 10:39591 (R;US)
Physical Radiation Effects
Radiation damage in crystalline materials as investigated using ion channeling and transmission electron microscopy, 10:39516 (RA;CA)

ALUMINIUM ARSENIDES
Molecular Beam Epitaxy
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Superlattices
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)

ALUMINIUM BASE ALLOYS
Impact Tests
Stress and strain-rate dependence of spall strength in two aluminum alloys, 10:39557 (R;US)

ALUMINIUM COMPOUNDS
See also ALUMINIUM ARSENIDES
ALUMINIUM NITRIDES
ALUMINIUM OXIDES
Molecular Beam Epitaxy
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Soil Chemistry
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)
Superlattices
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)

ALUMINIUM NITRIDES
Compression
X-ray diffraction studies of shock-modified inorganic materials, 10:39592 (R;US)

ALUMINIUM OXIDES
See also CORUNDUM
Catalytic Effects
Catalyst deactivation in direct coal liquefaction processes: a quantitative approach to understanding the rate of activity loss, 10:38707 (R;US)
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Compression
X-ray diffraction studies of shock-modified inorganic materials, 10:39592 (R;US)
Crystallization
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Refractivity
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Sorptive Properties
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
Thermal Expansion
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)

ALUMINUM

ALVEOLI (PULMONARY)
See LUNGS

AMERICAN BLACKS
See BLACK AMERICANS

AMERICIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Distribution Functions
Studies of the hydrolytic and gamma-radiolytic degradation of the TRUEX-CCl$_4$ process solvent, 10:38841 (R;US)
Solubility
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
Solvent Extraction
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)
Studies of the hydrolytic and gamma-radiolytic degradation of the TRUEX-CCl$_4$ process solvent, 10:38841 (R;US)
Sorption
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)

AMERICIUM 241
Retention Functions
Metabolic studies of ^{241}Am in man: continued follow-up of a non-occupational contamination of a child and his father, 10:40270 (RA;US)
Tissue Distribution
Cross-placental transfer of ^{241}Am in the baboon during late gestational pre-parturition, 10:40272 (RA;US)
Radioactivity studies. Progress report, 10:40267 (R;US)

AMERICIUM BROMIDES
Hydrolysis
Studies on the vapour phase hydrolysis of some lanthanide and actinide (III) bromides, 10:39703 (R;DE;In German)

AMERICIUM CARBONATES
Solubility
Behavior of americium in aqueous carbonate systems, 10:38946 (RA;US)

AMES TEST
See MUTAGEN SCREENING

AMINES
See also POLYCYCLIC AROMATIC AMINES
QUATERNARY COMPOUNDS
Derivatization
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)
Gas Chromatography
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)

Mass Spectroscopy
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)
AMINO ACIDS
Organic acids containing both a basic amino group and an acidic carboxyl group.
Physical Radiation Effects
Comparative study of radiation damage by EELS and electron diffraction, 10:39664 (RA;CA)
AMINO ALCOHOLS
See AMINES
AMINO SUGARS

AMMETERS
Birefringence
Calibrated Faraday current and magnetic field sensor, 10:40094 (R;US)
Optical Fibers
Calibrated Faraday current and magnetic field sensor, 10:40094 (R;US)
AMMONIA
Electric Conductivity
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Shock Waves
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Shock temperature measurements in ammonia, 10:40488 (R;US)
ANAEROBIC DIGESTION
Chestnuts
Pilot project to investigate the anaerobic digestion of the European water chestnut. Final report, 10:38982 (R;US)
ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS
ANALYSIS (QUANTITATIVE CHEMICAL)
See QUANTITATIVE CHEMICAL ANALYSIS
ANGRA-2 REACTOR
Angra Dosreis, Rio De Janeiro, Brazil
Reactor Safety
Verification of SACI-2 computer code compared with experimental results of Biblis-A and Loop-7 computer code, 10:39314 (RA;BR;In Portuguese)
ANIMAL CELLS
Includes human cells.
Labelling
Improved method for calculating labeling indices of lung epithelial and interstitial cells, 10:40209 (J;US)
Mammals
Modification of radiosensitivity of mammalian cells by means of hyperthermia and chemical agent. Coordinated programme on improvement of cancer therapy by the combination of treatment by conventional radiation and physical or chemical means. Final report for the period 15 October 1982-14 October 1984, 10:40281 (R;XA)
Sampling
Improved method for calculating labeling indices of lung epithelial and interstitial cells, 10:40209 (J;US)
ANODES
Catalysts
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
ANTHRACENE
Chemical Reaction Kinetics
Subthreshold generation of free radicals in shock-loaded organic solids, 10:39695 (R;US)
ANTIFERROELECTRIC MATERIALS
Crystal Structure
Structural study of the high-pressure antiferroelectric phase of CsH_2PO_4, 10:39604 (R;US)
ANTIFERROMAGNETIC MATERIALS
Free Energy
Low-temperature phase of a stacked triangular Ising antiferromagnet, 10:40927 (J;US)
Phase Studies
Low-temperature phase of a stacked triangular Ising antiferromagnet, 10:40927 (J;US)
Solitons
Narrow and broad solitons in the antiferromagnetic chains of $CsCoCl_3$ and TMMC, 10:39606 (R;FR)
ANTIMONY ALLOYS
Optical Properties
Augmented space formulation of the optical conductivity of random semiconducting alloys, 10:39507 (R;XA)
ANTINEOPLASTIC DRUGS
Radiosensitivity Effects
Modification of radiosensitivity of mammalian cells by means of hyperthermia and chemical agent. Coordinated programme on improvement of cancer therapy by the combination of treatment by conventional radiation and physical or chemical means. Final report for the period 15 October 1982-14 October 1984, 10:40281 (R;XA)
ANTINEUTRINO-NUCLEON INTERACTIONS
Charged-Current Interactions
Nuclear effect study on nucleon structure functions, in comparison with antineutrino interactions on neon and deuterium, 10:40535 (R;FR;In French)
ANTIOXIDANTS
Toxicity
Role of toxicological interactions in lung injury, 10:40315 (J;US)
ANTIPROTON BEAMS
Feasibility Studies
anti pp physics above 2GeV/c, 10:40580 (RA;DE)
ANTIPROTON REACTIONS
Annihilation
High nuclear temperatures by antimatter-matter annihilation, 10:40854 (R;US)
Cascade Theory
High nuclear temperatures by antimatter-matter annihilation, 10:40854 (R;US)
Particle Production
Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions, 10:40596 (R;SU;In Russian)
ANTRIM SHALES
See BLACK SHALES
APATITES
Isotope Dating
Radiocarbon dating of fossil bone apatite, 10:40336 (RA;NZ)
APPARATUS
See EQUIPMENT
APPLIANCES
Sales
Improved controls needed over waivers of the Armed Services Exchange Regulations, 10:41063 (R;US)
APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES
AQUATIC ECOSYSTEMS
Carbon Isotopes
Use of stable carbon isotope ratios as a problem solving tool in ecological research, 10:40198 (RA;NZ)
AQUATIC ORGANISMS
Unspecified biota characteristic of aquatic ecosystems.
See also FISHES
Radionuclide Migration
Assessment of biological processes close to the sea bed in a slope region and its significance to the assessment of sea bed disposal of radioactive waste, 10:38898 (R;GB)
AQUEOUS SOLUTIONS
Optimization
Optimization of aqueous sample composition for measurement with liquid scintillator detectors, 10:40064 (RA;CS;In Czech)
AQUIFERS
Contamination
Study of contaminant plume control in fractured porous media, 10:40344 (RA;US)
Hydrology
Hydrogeology of parts of the Central Platte and Lower Loup Natural Resources Districts, Nebraska, 10:40359 (R;US)

Study of contaminant plume control in fractured porous media, 10:40344 (RA;US)
Research Programs
Glacial aquifer systems in the northeastern United States: a study plan, 10:40351 (R;US)
Water Supply
Availability of water from the alluvial, aquifer in part of the Green River Valley, King County, Washington, 10:40358 (R;US)

ARCHAEOLOGICAL SPECIMENS
Activation Analysis
Trace-element discrimination of distinct sources of native copper for archaeological provenance, 10:39670 (RA;NZ)
Age Estimation
Pleistocene climate and archaeology in Kashmir. New multidisciplinary data, 10:40334 (RA;NZ)

ARCHAEOLOGY
Meetings
Symposium on Archaeological Science in the Pacific Region. Pacific Science Congress, February 1-11 1983, jointly held with the Annual Conference of the Society for Archaeological Sciences, 10:40340 (R;NZ)

ARCTIC REGIONS
Natural Gas Deposits
Arctic energy technologies workshop: proceedings, 10:38786 (R;US)
Petroleum Deposits
Arctic energy technologies workshop: proceedings, 10:38786 (R;US)
Resource Development
Arctic energy technologies workshop: proceedings, 10:38786 (R;US)

ARGENTINA
Radioisotopes and radiations program. Contribution to the technological development, 10:38973 (R;AR;In Spanish)
Research Programs
Activities of the Development Branch. 1978-1981, 10:41067 (R;AR;In Spanish)
Summary of activities of the Research Branch during 1981, 10:41068 (R;AR;In Spanish)

ARGON
Emission Spectra
Argon arc lamps, 10:40100 (J;US)
Ion-Atom Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Ion-Molecule Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)

ARGON 39
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)

ARGON 40 REACTIONS
Equations
Linearized Uehling-Uhlenbeck equation applied to high energy nuclear collisions, 10:40711 (RA;FR)
Fission
Phase space model of angular distributions in heavy-ion-induced fission, 10:40767 (RA;FR)
Fission Fragments
Investigation of linear momentum transfer on the Ar + U system at 44 MeV/u, 10:40777 (RA;FR)
Heavy Ion Fusion Reactions
Investigation of linear momentum transfer on the Ar + U system at 44 MeV/u, 10:40777 (RA;FR)
Inclusive Interactions
Linearized Uehling-Uhlenbeck equation applied to high energy nuclear collisions, 10:40711 (RA;FR)
Linear Momentum Transfer
Investigation of linear momentum transfer on the Ar + U system at 44 MeV/u, 10:40777 (RA;FR)
Pickup Reactions
Direct transfer reactions induced by 1760 MeV ^{40}Ar beam on ^{27}Al target nucleus, 10:40701 (RA;FR)
Stripping
Direct transfer reactions induced by 1760 MeV ^{40}Ar beam on ^{27}Al target nucleus, 10:40701 (RA;FR)
Transfer Reactions
Direct transfer reactions induced by 1760 MeV ^{40}Ar beam on ^{27}Al target nucleus, 10:40701 (RA;FR)

ARGON IONS
Ion-Atom Collisions
Study on a neon Auger spectrum in ion-atom collisions with neon and argon ions at E=5.6 MeV/nucleon 230, 10:40455 (RA;SU;In Russian)

ARGON ISOTOPES
See also ARGON 39
Argon 40 Reactions
Linearized Uehling-Uhlenbeck equation applied to high energy nuclear collisions, 10:40711 (RA;FR)

ARGON METHOD
See ISOTOPE DATING

ARIZONA
Floods
Estimation of magnitude and frequency of floods in Pima County, Arizona, with comparisons of alternative methods, 10:40364 (R;US)
Nature Reserves
Assessment of mineral resources in the Muggins Mountains Bureau of Land Management Wilderness Study Area (AZ-050-53A), Yuma County, Arizona, 10:40354 (R;US)

ARKANSAS
Water Tables
Ground-water levels in Arkansas, Spring 1984, 10:40356 (R;US)

ARKANSAS POWER-LIGHT-1 REACTOR
See ARKANSAS-1 REACTOR

ARKANSAS-1 REACTOR
Pope, Arkansas, USA
Neutron Dosimetry
Correlations between calculated surveillance dosimeter activities and pressure vessel fluxes in the Arkansas Nuclear One-Unit 1 Reactor, 10:39115 (R;US)
Neutron Flux
Correlations between calculated surveillance dosimeter activities and pressure vessel fluxes in the Arkansas Nuclear One-Unit 1 Reactor, 10:39115 (R;US)
Personnel
How accreditation can help achieve excellence in training programs, 10:39165 (RA;US)
Use of task analysis in early program development, 10:39168 (RA;US)
Pressure Vessels
Correlations between calculated surveillance dosimeter activities and pressure vessel fluxes in the Arkansas Nuclear One-Unit 1 Reactor, 10:39115 (R;US)
Reactor Operators
How accreditation can help achieve excellence in training programs, 10:39165 (RA;US)

AROMATIC COMPOUNDS
See AROMATICS

AROMATICS
See also CONDENSED AROMATICS
POLYCYCLIC AROMATIC HYDROCARBONS
TETRALIN
TOLAN
Chemical Bonds
Estimation of aromatic and hydroaromatic content in complex hydrocarbon samples by liquid chromatography and field-ionization mass spectrometry, 10:38713 (RA;US)
Mass Spectra
Estimation of aromatic and hydroaromatic content in complex hydrocarbon samples by liquid chromatography and field-ionization mass spectrometry, 10:38713 (RA;US)
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985 (Hydroxyl aromatics), 10:38712 (R;US)

Molecular Weight
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985 (Hydroxyl aromatics), 10:38712 (R;US)

ARSENIC
Adsorption
Arsenic-terminated Ge(111): An ideal 1 x 1 surface, 10:39633 (J;US)
Binding Energy
Arsenic-terminated Ge(111): An ideal 1 x 1 surface, 10:39633 (J;US)
Emission Spectra
Measurement and analysis of the spectrum of neutral arsenic, 10:40480 (J;US)
Removal
Trace element removal by coprecipitation with amorphous iron oxyhydroxide: engineering evaluation. Final report, 10:38723 (R;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

ARSENIC ALLOYS
Optical Properties
Augmented space formulation of the optical conductivity of random semiconducting alloys, 10:39507 (R;XA)

ARSENIC SELENIDES
Photoconductivity
Study of the deviation influence from the lattice upon the transport properties providing equilibrium and non-equilibrium conditions, 10:39613 (R;RO;In Romanian)
Photovoltaic Effect
Study of the deviation influence from the lattice upon the transport properties providing equilibrium and non-equilibrium conditions, 10:39613 (R;RO;In Romanian)

ASBESTOS
Data Acquisition Systems
Description of the data acquisition software for cement-asbestos machines, 10:41089 (R;AT;In German)

ASHES
See also FLY ASH
Chemical Composition
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 10:38750 (R;US)

ASPHALTENES
Chemical Reaction Yield
Combined processing of coal and heavy resids. Progress report, January 16, 1985-April 15, 1985, 10:38686 (R;US)
Fractionation
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)
Hydrogenation
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)

ASTATINE 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)

ATC DEVICES
Joule Heating
ATC tokamak, 10:40984 (RA;US)

ATOM COLLISIONS
See also ION-ATOM COLLISIONS
Bibliographies
International bulletin on atomic and molecular data for fusion. No. 27, 10:40969 (R;XA)

ATOMIC ABSORPTION SPECTROSCOPY
See ABSORPTION SPECTROSCOPY

ATOMIC BEAM DIFFRACTION
Temperature dependence of diffracted-beam intensities in atom-surface scattering. Annual technical report, 10:40434 (R;US)
Wave Packets
Examination of the use of wave packets for the calculation of atom diffraction by surface. Annual technical report, 10:40433 (R;US)

ATOMIC BOMBS
See NUCLEAR WEAPONS

ATOMIC ENERGY
See NUCLEAR ENERGY

ATOMIC ENERGY LAWS
Sim and Ritchie's summary of the law relating to atomic energy and radioactive substances, 10:41100 (R;GB)

ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS

ATOMIC MODELS
Hartree-Fock Method
Multiconfiguration Hartree-Fock calculations for complex atoms, 10:40483 (BA;US)

ATOMIC PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Eigenfunctions
Manifest rotation symmetric expressions for angular momentum eigenfunctions, 10:40856 (R;NO)

ATOMIC SHELLS
See ELECTRONIC STRUCTURE

ATOMIC WEAPONS
See NUCLEAR WEAPONS

ATOMS
See also MUONIC ATOMS
Electromagnetic Fields
A three level atom with quantized field modes and coherent trapping, 10:40641 (BA;US)
Optical Pumping
Further generalization of Landau-Zener calculation, 10:40476 (J;US)
Resonance Fluorescence
Transient delayed spectrum of collisionally damped resonance fluorescence in a partially coherent field, 10:40477 (J;US)
Trapping
A three level atom with quantized field modes and coherent trapping, 10:40641 (BA;US)

ATTITUDES OF THE PUBLIC
See PUBLIC OPINION

AUDITORY ORGANS
Protective Clothing
Overview of Bureau of Mines hearing protection research, 10:38781 (RA;US)

AUGER ELECTRON SPECTROSCOPY
Accuracy
Precision in Auger analysis, 10:39666 (RA;CA)
Meetings
Proceedings, 10:40067 (R;CA)
Reviews
Introduction to quantitative microanalysis with the scanning Auger microprobe (SAM), 10:39665 (RA;CA)

AURORAE
Charged-Particle Transport
IMS (International Magnetospheric Study) contributions to the understanding of auroral precipitation, transport, and particle sources, 10:40428 (R;US)

AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Materials Testing
Materials division facilities and equipment (Petten Establishment, high temperature materials), 10:39503 (R;XE)
Mechanical Properties
Overview of the research programmes of the Commission of the European Communities Joint Research Centre in the field of LMFBR materials properties, 10:39529 (RA;XA)

Physical Radiation Effects
Electron microscopy of some irradiated solids, 10:39487 (R;FR;In French)
AUSTRALIAN ATOMIC ENERGY COMMISSION
See AAEC
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES STANDARDS
AUTOMOBILE INDUSTRY
See AUTOMOTIVE INDUSTRY
AUTOMOBILES
Air Pollution Abatement
Technologies for reducing air pollution on the motor vehicle sector, 10:39468 (R;DE;In German)
Environmental Impacts
Technologies for reducing air pollution on the motor vehicle sector, 10:39468 (R;DE;In German)
Hydrogen Fuels
Hydrogen drives in practice, 10:39472 (R;DE;In German)
Propulsion Systems
Initial evaluation of a coal burning turbine powered vehicle system, 10:39470 (RA;US)
Road Tests
Hydrogen drives in practice, 10:39472 (R;DE;In German)
AUTOMOTIVE INDUSTRY
Economic Growth
Unbalanced recovery in energy related markets: growth retarding implications for 1985, 10:39378 (R;US)
AUTORADIOGRAPHY
Nuclear radiation detection by autoradiography, 10:40286 (RA;MX;In Spanish)
AVIATION FUELS
Exports
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
Freezing
Fuel freeze-point investigations. Final report, September 1982-March 1984, 10:38792 (R;US)
Imports
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
Production
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
Stockpiles
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)

B

B MESONS
Particle Production
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
Semileptonic Decay
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
Weak Hadronic Decay
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
BACKFILLING
Radionuclide Migration
Buffer mass test - Site documentation, 10:38951 (R;SE)
BACKSCATTERING
Monte Carlo Method
Probability calculation of electron backscattering, 10:40894 (RA;CS;In Czech)
BACTERIA
See also METHANOGENIC BACTERIA SALMONELLA
DNA-Cloning
Development of a genetic system in Bacteroides. Final report, June 14, 1981-June 14, 1985, 10:40204 (R;US)
Enzyme Activity
β-xylosidase of Thermomonospora, 10:40232 (J;US)
BAG MODEL
Eigenfunctions
Manifest rotation symmetric expressions for angular momentum eigenfunctions, 10:40856 (R;NO)
BAGHOUSES
Technology Assessment
Arapahoe low-sulfur coal fabric filter pilot plant. Volume 2. Characterization and reverse-gas cleaning tests, October 1980-April 1982. Final report, 10:38722 (R;US)
BALLOONING INSTABILITY
Effects of trapped alpha particles on ballooning modes in tokamaks, 10:40977 (R;US)
BANKS
See COMMERCIAL BUILDINGS
BARITE
Activation Analysis
Methodological aspects and development of techniques for neutron activation analysis of microcomponents in materials of geologic origin, 10:39647 (R;AR;In Spanish)
Geologic Deposits
Origin and control of the Camamu barite deposit (BA), 10:40333 (R;BR;In Portuguese)
BARIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)
BARIUM ISOTOPES
See also BARIUM 141
Energy Levels
Low-lying dipole states of spherical nuclei, 10:40736 (RA;SU;In Russian)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BARYONS
See also HYPERONS NUCLEONS
Mass Spectra
Quark model with one-gluon corrections-radially excited states, 10:40599 (R;BR)
Quark Model
Quark model with one-gluon corrections-radially excited states, 10:40599 (R;BR)
Semileptonic Decay
Semileptonic *DELTA*S=1 decays of baryons with boosted bags, 10:40598 (R;NO)
BASALT
Acoustic Measurements
Cross-hole acoustic measurements in basalt, 10:40368 (RA;US)
Deformation
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
Geochemistry
Investigation of natural analogs of nuclear waste repository conditions in Columbia River basalt, 10:38913 (RA;US)
Geologic Structures
Evaluation of technology for detection of anomalies ahead of a tunnel face in basalt, 10:40384 (RA;US)
Hydraulic Conductivity
Probability encoding of hydrologic parameters for basalt. Elicitation of expert opinions from a panel of five consulting hydrologists, 10:40349 (R;US)
Probability encoding of hydrologic parameters for basalt. Elicitation of expert opinions from a panel of three basalt waste isolation project staff hydrologists, 10:40350 (R;US)
Hydraulic Fracturing
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
Hydrology
Extent and hydrologic properties of the disturbed rock zone around underground openings in basalt, 10:38907 (RA;US)
Hydrothermal Alteration
Hydrothermal alteration of host rocks near buried high-level radioactive waste, 10:38909 (RA;US)

Porosity
Probability encoding of hydrologic parameters for basalt. Elicitation of expert opinions from a panel of five consulting hydrologists, 10:40349 (R;US)
Probability encoding of hydrologic parameters for basalt. Elicitation of expert opinions from a panel of three basalt waste isolation project staff hydrologists, 10:40350 (R;US)
Radioactive Waste Disposal
Thermomechanical response of salt and hard rocks to thermal loading by wastes over 10 years old, 10:38906 (RA;US)
Waste-Rock Interactions
Thorium species on basalt surfaces, 10:38911 (RA;US)

BASELINE ECOLOGY
Aquatic Ecosystems
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume IV, 10:38669 (R;US)

BATTELLE PACIFIC NORTHWEST LABORATORIES
Data Base Management
Assurance Program for Remedial Action (APRA) microcomputer-operated bibliography management system, 10:41098 (R;US)

BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES

BAUXITE
Activation Analysis
Shielding considerations and design of a set up for on-line determination of aluminium in bauxite ore using activation analysis with Am-Be neutron source, 10:39911 (RA;BR)
Ore Processing
Shielding considerations and design of a set up for on-line determination of aluminium in bauxite ore using activation analysis with Am-Be neutron source, 10:39911 (RA;BR)

BAYARD-ALPERT GAGES
Control Equipment
Precision ion vacuum gage with logarithmic response, 10:40097 (R;US)
Design
Precision ion vacuum gage with logarithmic response, 10:40097 (R;US)
Fabrication
Precision ion vacuum gage with logarithmic response, 10:40097 (R;US)

BEAM BENDING MAGNETS
Design
Design and performance of 40 mm, 6.5 T, collared, cold-iron model magnets, 10:39799 (R;US)

BEAM DUMPS
Performance Testing
Remote recovery of irradiated tensile samples incapsulated in Pb-Bi, 10:39861 (R;US)

BEAM DYNAMICS
See also BETATRON OSCILLATIONS
Computerized Simulation
Effect of induced charge at boundaries on transverse dynamics of a space-charge-dominated beam, 10:39818 (R;US)

BEAM FOCUSING MAGNETS
Permanent Magnets
Hybrid rare earth quadrupole drift tube magnets, 10:39816 (R;US)
Some uses of REPMM's in storage rings and colliders, 10:39828 (R;US)

BEAM INJECTION
See also NEUTRAL ATOM BEAM INJECTION
Mode Selection
Achievement of Bevalac rapid mode switching, 10:39864 (R;US)
Phase Oscillations
Phase setting of radiofrequency fields in LEP injector linear accelerators, 10:39863 (R;FR;In French)

BEAM MONITORS
Field Effect Transistors
Amplifiers for operation at 4.2 K, 10:39851 (RA;SU;In Russian)

BEAM TRANSPORT
Design
High energy beam transport system for a Heavy Ion Medical Accelerator, 10:40222 (R;US)

BEANS
Biological Radiation Effects
Stimulation effects of gamma radiation on mung bean (Vigna radiata (L) Wilzcek), 10:40296 (R;TH;In Thai)

BEARINGS
Inspection
Correction of compressor critical speed condition through fluid-film bearing optimization, 10:38834 (R;US)
Specifications
Correction of compressor critical speed condition through fluid-film bearing optimization, 10:38834 (R;US)

BEAUTY PARTICLES
Particle Identification
Charm, bottom and Higgs search, 10:40578 (RA;DE)
Particle Production
Observation of Bsup(*) production in e^+e^- interactions above the b-flavor threshold, 10:40537 (R;DE)
Weak Particle Decay
Charm and heavy flavor lifetimes, 10:40509 (R;US)

BELGIUM
Radiation Protection Laws
Act of 14 July 1983 amending Act of 29 March 1958 relating to the protection of the population against the hazards of ionizing radiation, 10:40903 (R;XA;In French and English)
Radioactive Materials
Ministerial Order of 31 December 1982 made in implementation of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 10:38853 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 3(2)(a) of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 10:38854 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 8(1) of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 10:38855 (R;XA;In French and Dutch)
Ministerial Order of 31 December 1982 made in implementation of Section 9 of the Royal Order of 5 November 1982 on the training certificate for drivers of vehicles carrying radioactive materials in cisterns or vessels, 10:38856 (R;XA;In French and Dutch)

BENTONITE
Radionuclide Migration
Buffer mass test - Site documentation, 10:38951 (R;SE)

BENZOFURANS
Hydrogenation
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)

BENZOPYRENE
Biological Effects
Measurement of unscheduled DNA synthesis in germ cells of the male mouse (Mus musculus), 10:40303 (R;US)

BENZOTHIOPHENES
See THIONAPHTHENES

BERKELEY BEVALAC
See BEVALAC

BERKELEY SUPERHILAC

BERYLLIUM
Charged-Particle Transport
Measurement of transition radiation from medium-energy electrons, 10:40883 (J;US)
Neutron Transport
Search for the phonon analog of Cherenkov radiation at the neutron passage flight through matter, 10:40876 (R;SU;In Russian)
Pion Minus Reactions
Compton effect on πp meson, 10:40519 (R;SU;In Russian)

BERYLLIUM 10
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)

BERYLLIUM 7
Deposition
Beryllium-7 deposition to terrestrial vegetation in Tennessee, 10:40137 (R;US)
Foliar Uptake
Beryllium-7 deposition to terrestrial vegetation in Tennessee, 10:40137 (R;US)
BERYLLIUM 8 TARGET
Photonuclear Reactions
Photodisintegration of p-shell light nuclei, 10:40683 (RA;SU;In Russian)
BERYLLIUM 9 TARGET
Carbon 14 Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)
Neon 22 Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)
Nitrogen 14 Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)
BERYLLIUM MODERATORS
See BERYLLIUM
BETA BACKSCATTERING GAGES
See RADIOMETRIC GAGES
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA BEAMS (POSITRONS)
See POSITRON BEAMS
BETA DECAY
For neutron and nuclear decay.
Asymmetry
Measurement of the energy dependent beta asymmetry in the decay of ^{8}Li, 10:40679 (R;US)
BETA DETECTION
Exoelectron Dosemeters
Efficacy of TSEE response for soft beta detection, 10:39942 (RA;CS;In Czech)
Li-Drifted Ge Detectors
Double beta decay research with a Ge(Li) detector, 10:40013 (RA;SU)
Liquid Scintillation Detectors
Cerenkov counting, 10:39960 (RA;MX;In Spanish)
Counting by liquid scintillation techniques, 10:39959 (RA;MX;In Spanish)
Possible uses of liquid scintillation detector in radionuclide metrology, 10:39949 (RA;CS;In Czech)
Proportional Counters
Multicell proportional counter for the ^{136}Xe neutrinoless double beta-decay, 10:40014 (RA;SU;In Russian)
Scintillation Counting
Double labelled sample counting, 10:39961 (RA;MX;In Spanish)
BETA SPECTRA
Spectra Unfolding
Unfolding of beta spectra measured with semiconductor detector, 10:39932 (RA;CS;In Czech)
BETA SPECTROMETERS
Position Sensitive Detectors
Sector beta-spectrometer with a position-sensitive detector, 10:39970 (RA;SU;In Russian)
Resolution
Beta spectrometer for precise comparative measurements with two beta sources, 10:39971 (RA;SU;In Russian)
BETATRON OSCILLATIONS
Damping
Systems for damping the beam transverse dipole oscillations in the IHEP accelerator, 10:39807 (R;SU;In Russian)
BETATRONS
Bremsstrahlung
Contribution to spectrometry of betatron bremsstrahlung, 10:39839 (RA;CS;In Slovak)
BETHE-WEIZSAECKER RELATION
See WEIZSAECKER FORMULA
BEVALAC
Beam Injection
Achievement of Bevalac rapid mode switching, 10:39864 (R;US)
Dosimetry
Wobbler dosimetry for the biomedical program at the LBL Bevalac, 10:40223 (R;US)
BEVATRON
Beam Injection
Initial operation of the new Bevatron local injector, 10:39869 (R;US)
Versatile rf controller, 10:39868 (R;US)
Penning Ion Sources
Improved Bevatron local injector ion source performance, 10:39867 (R;US)
BIBLIS REACTOR
See BIBLIS-A REACTOR
BIBLIS-A REACTOR
Reactor Safety
Verification of SACI-2 computer code compared with experimental results of Biblis-A and Loop-7 computer code, 10:39314 (RA;BR;In Portuguese)
BINARY ALLOY SYSTEMS
Energy-Level Density
Renormalization group treatment for the electronic spectrum of partially ordered one-dimensional alloys, 10:39556 (R;BR)
Solidification
Macroscopic global modeling of binary alloy solidification processes, 10:40949 (J;US)
BINARY MIXTURES
Solidification
Macroscopic global modeling of binary alloy solidification processes, 10:40949 (J;US)
BIOASSAY
Uses
Cell-specific activation of chemical carcinogens into mutagens for cultured human and rodent cells, 10:40305 (R;US)
BIOCENOSES
See ECOSYSTEMS
BIOGAS
See METHANE
BIOGEOCENOSES
See ECOSYSTEMS
BIOLOGICAL INDICATORS
Research Programs
Search for indicatory criteria to predict possible effects of stress on ecosystems. Vol. 6, 10:40313 (R;DE;In German)
BIOLOGICAL MATERIALS
See also FOREST LITTER
Activation Analysis
Dry and wet ashing of biological materials, 10:39655 (RA;CS;In Czech)
Neutron activation determination of low manganese concentrations in standard biological materials, 10:39653 (RA;CS;In Czech)
Dry Ashing
Dry and wet ashing of biological materials, 10:39655 (RA;CS;In Czech)
Electron Spectroscopy
Quantification in very high resolution elemental maps of biological specimens by electron spectroscopic imaging, 10:39667 (RA;CA)
Wet Ashing
Dry and wet ashing of biological materials, 10:39655 (RA;CS;In Czech)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL TESTING
See BIOASSAY
BIOMASS
Energy Source Development
Assessment of potential biomass energy impacts on the forest resource of the 201-county Tennessee Valley region, 10:39003 (R;US)

Meetings
Energy from biomass: building on a generic technology base. Proceedings of the third technical review meeting, 10:38995 (R;US)

BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Performance
Waste water treatment in an anaerobic fluidized bed reactor with immobilized cells, 10:39466 (R;FR;In French)

BIOSPHERE
Radionuclide Migration
ECOS: sorption, dose, consumption and miscellaneous data values, 10:38938 (R;GB)

BIPHOSPHATES
See ACID PHOSPHATES

BIRDS
Behavior
Radar, electro-optical, and visual methods of studying bird flight near transmission lines. Final report, 10:39104 (R;US)

BISMUTH
Structure Factors
Contributions to atomic microdynamics study in some liquid metals by means of soft neutrons scattering, 10:39520 (R;RO;In Romanian)

BISMUTH 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)

BISMUTH 209
Isomer Shift
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
M1-Transitions
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)

BISMUTH 209 TARGET
Alpha Reactions
Description of nuclear reaction product spectra and excited nuclei temperature, 10:40759 (RA;SU;In Russian)
Chlorine 37 Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Iron 56 Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Iron 58 Reactions
Measurement of alpha decay rare events in experiments on synthesis of far transfermium elements, 10:40791 (RA;SU;In Russian)
Proton Reactions
Description of double differential cross sections of reactions with complex particles in a formalism of multistage direct processes with account for the coalescence mechanism, 10:40738 (RA;SU;In Russian)

BITTER SPAR
See DOLOMITE

BITUMENS
Chemical Analysis
Tar sand, 10:38812 (RA;US)

BITUMINOUS COAL
Activation Energy
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
Chemical Composition
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Combustion
Coal-Burning Gas Turbine Program of the Locomotive Development Committee, Bituminous Coal Research, Inc., 10:39469 (RA;US)
Combustion Products
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Mineralogy
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Washing
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)

BLACK AMERICANS
Research Programs
Historically black colleges and universities invitational working session, November 8 and 9, 1984, 10:41058 (R;US)

BLACK SHALES
Hydrogenation
Application of solvent hydrogen donor process for the conversion of eastern oil shales. Final progress report, October 1, 1982-December 31, 1984, 10:38813 (R;US)

BLADES (TURBINES)
See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLENDERS
See MIXERS

BLOOD CELLS
Early Radiation Effects
Pheripheral blood indicators of animals, irradiated by fast neutrons of different energies, 10:40293 (RA;SU;In Russian)

BLOOD FORMATION
Ontogenesis
Differential expression of murine adult hemoglobins in early ontogeny, 10:40233 (R;US)

BLOOD PLASMA
Biological Radiation Effects
Blood plasma inhibitor activity of animals irradiated by fast neutrons, 10:40292 (RA;SU;In Russian)
Radiation Injuries
Free-radical oxidation in evaluation of the chemiluminescent characteristics of the irradiated animal blood plasma, 10:40290 (RA;SU;In Russian)

BLOOD SERUM
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)

BODY
See also TISSUES
Radionuclide Kinetics
In vivo measurements of /sup 243,244/Cm retention in the adult baboon, 10:40269 (RA;US)

BODY WAVES P (SEISMIC)
See SEISMIC P WAVES

BOILERS
Proceedings of the joint symposium on stationary combustion NO/sub x/ control. Volume I. NO/sub x/ emission issues and invited papers, 10:38724 (R;US)
Crack Propagation
Life extension of components with high cumulative fatigue usage, 10:39498 (R;US)
Efficiency
Combustion testing of coal-water and coal-methanol-water mixtures in oil-designed boilers, 10:38757 (R;US)
Retrofitting
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)

BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS

BONES
See SKELETON

BONNEVILLE POWER ADMINISTRATION
Energy Conservation
Review and assessment of Bonneville Power Administration's Conservation/Load/Resource Modeling Process, 10:39410 (R;US)
Research Programs
Issue Backgrounder: west of the divide - Fish and Wildlife projects in western Montana, 10:38992 (R;US)
Weatherization
Actual electricity savings for homes retrofit by the BPA Residential Weatherization Program, 10:39447 (R;US)
BOREHOLES
Directional Drilling
Feasibility studies and conceptual design for placing steel liner in long, horizontal boreholes for a prospective nuclear waste repository in tuff, 10:38928 (R;US)
Strains
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
Stresses
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
BORON
Leaching
Parametric testing of a DWPF glass, 10:38934 (R;US)
Mass Spectroscopy
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
Titration
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
BORON 10
Energy Levels
Excitation of low-lying states of light nuclei in the (e,e'), (π,π') and (γ,π) reactions, 10:40682 (RA;SU;In Russian)
BORON 10 REACTIONS
Pickup Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
BORON 10 TARGET
Nitrogen 14 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)
BORON 11 REACTIONS
Pickup Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
BORON 11 TARGET
Alpha Reactions
Calculation of angular correlation function and spin-tensors of the density matrix in the $^{11}B(\alpha, t_1\gamma)^{13}C$ reaction, 10:40686 (RA;SU;In Russian)
BORON ALLOYS
Extrusion
Hydrostatic extrusion of amorphous $Fe_{83}B_{13}Si_6$ and $U_{70}Cr_{30}$ ($Fe_{83}B_{13}Si_6$; $U_{70}Cr_{30}$), 10:39567 (R;US)
BORON CARBIDES
Quantitative Chemical Analysis
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
BOROSILICATE GLASS
Leaching
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)
Parametric testing of a DWPF glass, 10:38934 (R;US)
BOROSILICATES
See BOROSILICATE GLASS
BOSONS
See also MESONS
Weak Particle Decay
New weak boson decays and possible spin 3/2 leptons, 10:40558 (R;FR)
BOTTOM MESONS
See B MESONS
BOTTOM PARTICLES
See BEAUTY PARTICLES
BOUND STATE
Nuclear Reaction Kinetics
Three-body forces, 10:40861 (J;US)
BPA
See BONNEVILLE POWER ADMINISTRATION
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAGG GRAY CHAMBERS
Ionization chambers for measurement in high-energy electron and photon beams, 10:39924 (RA;CS;In Czech)
Radiation Dose Units
Inspection of Bragg-Gray theory applicability to the ionization chamber, irradiated by approximately 20 MeV neutrons, 10:40913 (RA;SU;In Russian)
BRAZIL
Isochronous Cyclotrons
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
Nuclear Energy
Nuclear energy insertion in the Brazilian electric system - Institutional and legal aspects, 10:39158 (R;BR;In Portuguese)
Proliferation
Control of non-proliferation of nuclear weapons and nuclear development - present uncertainties, 10:39391 (R;BE)
BREAKWATERS
See DAMS
BREEDER REACTORS
See also FBR TYPE REACTORS
LWBR TYPE REACTORS
Burnup
Burnup characteristics of binary breeder reactors, 10:39153 (RA;BR;In Portuguese)
Cost
Promise of tritium-lean fusion breeders, 10:39394 (RA;IL)
Reactor Safety
Project of a binary breeder reactor and its inherent safety, 10:39313 (RA;BR;In Portuguese)
Specifications
Project of a binary breeder reactor and its inherent safety, 10:39313 (RA;BR;In Portuguese)
BREEDING BLANKETS
Comparative Evaluations
Tritium control in helium-cooled blankets, 10:41034 (R;US)
Inventories
Tritium control in helium-cooled blankets, 10:41034 (R;US)
Neutron Transport
Integral experiments for fusion reactor shield design - summary of progress, 10:41055 (BA;JP)
Photon Transport
Integral experiments for fusion reactor shield design - summary of progress, 10:41055 (BA;JP)
BREEDING RATIO
Computer Calculations
Approximated neutronic calculation for the tritium breeding ratio in fusion reactor blankets (Using ANISN and MORSE computer codes), 10:41035 (RA;BR;In Portuguese)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BROMINE 77
Isotope Production
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
BROMINE 82
Radiochemistry
Myocardial imaging agents: synthesis, characterization, and evaluation of (Z)- and (Z,E)-18-^{82}Brbromo-5-tellura-17-octadecenoic acids, 10:39708 (J;US)
BRONCHOGENIC CARCINOMA
See CARCINOMAS
BROOKHAVEN AGS
Research Programs
AGS experiments: 1983, 1984, and 1985. Second edition, 10:39832 (R;US)

BROWN COAL
See also LIGNITE
Combustion
Open-cycle coal-burning turbine in Australia (1948 - 1970), 10:39070 (RA;US)
Fly Ash
Brown coal fly ash in soil stabilization, 10:38726 (R;US)
Hydrogenation
Optimization and operation of a small-scale test plant for brown coal hydrogenation, 10:38664 (R;DE;In German)
BRUCE-4 REACTOR
Tiverton, Ontario, Canada
ECCS
Commissioning a major retro fit in an existing nuclear power station, 10:39337 (R;CA)
Performance Testing
Commissioning a major retro fit in an existing nuclear power station, 10:39337 (R;CA)
Reactor Commissioning
Commissioning a major retro fit in an existing nuclear power station, 10:39337 (R;CA)
BTU CONTENT
See CALORIFIC VALUE
BUBBLE CHAMBERS
See also CRYOGENIC BUBBLE CHAMBERS
HEAVY LIQUID BUBBLE CHAMBERS
Image Processing
Procedure for physicist's scanning in the image processing system of bubble chambers, 10:39909 (R;SU;In Russian)
On-Line Measurement Systems
Program of geometric reconstruction for the Lyudmila facility with internal track-sensitive target, 10:39987 (R;SU;In Russian)
BUBBLES
Size
Assessment of experimental techniques for the measurement of bubble size in a bubble slurry reactor as applied to indirect coal liquefaction. Tasks 2 and 3, 10:38702 (RA;US)
BUILDING MATERIALS
See also CEMENTS
CONCRETE BLOCKS
CONCRETES
Fly Ash
Brown coal fly ash in soil stabilization, 10:38726 (R;US)
Mechanical Properties
Specialist meeting on mechanical properties of structural materials including environmental effects, Chester, England, 10-14 October 1983, 10:39547 (R;AT)
Meetings

Alarm Systems
BWR shutdown analyzer using artificial intelligence techniques, 10:39112 (R;US)
Computerized Control Systems
Computerized operator support system for BWR power plant during normal and abnormal conditions, 10:39205 (RA;HU)
Computerized Simulation
Computerized operator support system for BWR power plant during normal and abnormal conditions, 10:39205 (RA;HU)
Containment Buildings
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)
Pretest predictions for the response of a 1:8-scale steel LWR containment building model to static overpressurization, 10:39356 (R;US)
Coolant Cleanup Systems
Monitoring of chemical contaminants in BWRs. Final report, 10:39111 (R;US)
Depressurization Systems
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
ECCS
Recirculation pump suction line 2.8% break integral test at ROSA-III with HPCS failure, RUN 984, 10:39343 (R;JP)

Failures
Fault location using digraph with application to boiling water reactor, 10:39319 (RA;HU)
High Pressure Coolant Injection
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
Loss of Coolant
Recirculation pump suction line 2.8% break integral test at ROSA-III with HPCS failure, RUN 984, 10:39343 (R;JP)
Meltdown
Corium quench in deep pool mixing experiments, 10:39255 (R;US)
Neutron Dosimetry
Measurements of neutron dose and spectra inside reactor containment, 10:39365 (R;US)
Primary Coolant Circuits
Fault location using digraph with application to boiling water reactor, 10:39319 (RA;HU)
Monitoring of chemical contaminants in BWRs. Final report, 10:39111 (R;US)
Reactor Cooling Systems
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)
Reactor Materials
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)
Reactor Safety
German offsite accident consequence model for nuclear facilities: further development and application, 10:39299 (RA;US)
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
Reactor Shutdown
BWR shutdown analyzer using artificial intelligence techniques, 10:39112 (R;US)
Spent Fuel Storage
Thermal testing of simulated BWR consolidated fuel. Final report, 10:38848 (R;US)
Transients
Analytical modeling techniques for efficient heat transfer simulation in nuclear power plant transients, 10:39241 (R;US)
TITAN: an advanced three-dimensional coupled neutronic/thermal-hydraulics code for light water nuclear reactor core analysis, 10:39346 (R;US)

BWR
6 TYPE REACTORS
See GE STANDARD REACTOR

BY-PRODUCTS
Equations of State
Improved model of mixtures and its application to predict postdetonation behavior of PETN, 10:40114 (J;US)
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)

C

C CODES
Manuals
TORAC User's Manual. A computer code for analyzing tornado-induced flow and material transport in nuclear facilities, 10:39732 (R;US)

CABLES

CADMIUM
Biological Accumulation
Cadmium inhalation exposure estimates: their significance with respect to kidney and liver cadmium burden, 10:40314 (J;US)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Occupational Exposure
Cadmium inhalation exposure estimates: their significance with respect to kidney and liver cadmium burden, 10:40314 (J;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

CADMIUM 110 TARGET
Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

CADMIUM 111 TARGET
Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

CADMIUM 112 TARGET
Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

CADMIUM 113
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)

CADMIUM 114 TARGET
Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

CADMIUM 116 TARGET
Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

CADMIUM TELLURIDES
Chemical Composition
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
Chemical Vapor Deposition
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
Electric Conductivity
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
Optical Properties
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
Photoconductivity
Study of the deviation influence from the lattice upon the transport properties providing equilibrium and non-equilibrium conditions, 10:39613 (R;RO;In Romanian)
Photovoltaic Effect
Study of the deviation influence from the lattice upon the transport properties providing equilibrium and non-equilibrium conditions, 10:39613 (R;RO;In Romanian)

CAFFEINE
Radiosensitivity Effects
Modification of radiosensitivity of mammalian cells by means of hyperthermia and chemical agent. Coordinated programme on improvement of cancer therapy by the combination of treatment by conventional radiation and physical or chemical means. Final report for the period 15 October 1982-14 October 1984, 10:40281 (R;XA)
CALCIUM
Proton Reactions
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)
CALCIUM 40
Cluster Model
Clusters with mass numbers 5 <= X <= 16 in atomic nuclei, 10:40716 (RA;SU;In Russian)
CALCIUM 40 TARGET
Alpha Reactions
Identification of an internal-wave contribution to inelastic scattering, 10:40710 (RA;FR)
Boron 10 Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
Boron 11 Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
Carbon 13 Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
Carbon 14 Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)
Chlorine 37 Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Giant Resonance
Isospin homogeneity of giant dipole resonances, 10:40681 (RA;SU;In Russian)
Oxygen 16 Reactions
Effects of two-particle two-hole excitations on the mass distributions in the ^{16}O + ^{40}Ca reaction, 10:40709 (RA;FR)
Proton Reactions
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
CALCIUM 48
Giant Resonance
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)
M1-Transitions
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)
CALCIUM 48 REACTIONS
Heavy Ion Fusion Reactions
Recent attempts to produce superheavy elements by the ^{48}Ca+^{248}Cm reaction, 10:40789 (RA;SU)
CALCIUM 48 TARGET
Proton Reactions
Spin excitations in ^{48}Ca and ^{90}Zr with 319 MeV protons, 10:40717 (R;US)
Spin Flip
Spin excitations in ^{48}Ca and ^{90}Zr with 319 MeV protons, 10:40717 (R;US)
CALCIUM HYDROXIDES
Sorptive Properties
Low temperature capture of SO_2 (EER), 10:39101 (RA;US)
CALCIUM IODIDES
Excited States
Spin-rotation and hfs constants for the $X^2\Sigma^+$ and $B^2\Sigma^+$ states of CaI ($^{40}Ca^{127}I$), 10:40482 (J;US)
Ground States
Spin-rotation and hfs constants for the $X^2\Sigma^+$ and $B^2\Sigma^+$ states of CaI ($^{40}Ca^{127}I$), 10:40482 (J;US)
CALCIUM OXIDES
Sorptive Properties
Low temperature capture of SO_2 (EER), 10:39101 (RA;US)
CALCIUM SULFATES
Chemical Preparation
Preparation of $CaSO_4$-Dy and one of the possibilities of manufacturing TL gamma detectors, 10:39943 (RA;CS;In Czech)
Rare Earth Additions
Preparation, testing and dosimetric applications of $CaSO_4$ rare earth phosphors, 10:39601 (R;AU)
Thermoluminescence
Preparation, testing and dosimetric applications of $CaSO_4$ rare earth phosphors, 10:39601 (R;AU)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALIFORNIA
See also LONG VALLEY
Earthquakes
Source parameters of Coalinga aftershocks from a UC Berkeley temporary digital array, 10:40372 (RA;US)
Environmental Policy
State of California perspective on NO/sub x/ control for stationary sources, 10:40151 (RA;US)
Fishes
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Pacific Southwest) - California grunion (Leuresthes tenuis), 10:40178 (R;US)
Nature Reserves
Analytical results of stream-sediment samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40395 (R;US)
Spectrographic and chemical analyses of rock and soil samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40394 (R;US)
Petroleum Deposits
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
Petroleum Refineries
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
Seismic Waves
Seismic attenuation and crustal structure near the San Andreas fault zone from reflection profiling, 10:40373 (RA;US)
CALORIFIC VALUE
Measuring Instruments
Development of a prototype energy meter. Final report, November 1982-August 1984, 10:38806 (R;US)
CALORIMETERS
Calibration
Measurements of the response of a hadronic calorimeter to beams of pions and protons of 1-10 GeV/c momenta, 10:40052 (J;NL)
Ionization Chambers
Measurements of the response of a hadronic calorimeter to beams of pions and protons of 1-10 GeV/c momenta, 10:40052 (J;NL)
Response Functions
Measurements of the response of a hadronic calorimeter to beams of pions and protons of 1-10 GeV/c momenta, 10:40052 (J;NL)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALORIMETRIC DOSEMETERS
Electron Beams
Simple water calorimeter for measuring absorbed dose in irradiation using Tesla-4 MeV linear electron accelerator, 10:39920 (RA;CS;In Czech)
CALORIMETRY
On-Line Measurement Systems
Automatic apparatus for measuring thermophysical quantities controlled by calculator EMG 666, 10:40087 (RA;SU)
Computerized calorimeter system based on the ELECTRONICA-60 micro-computer, 10:40086 (RA;SU;In Russian)
Thermal Conductivity
Automatic apparatus for measuring thermophysical quantities controlled by calculator EMG 666, 10:40087 (RA;SU)

CAM
See COMPUTER-AIDED MANUFACTURING
CAMAC SYSTEM
Computer Application to Measurement And Control.
Logic Circuits
Logic units for complex experimental facilities with inter-unit connections, 10:39774 (RA;SU;In Russian)
CAMERAS
See also STREAK CAMERAS
Design
Type of new Chinese-produced high-speed camera and its utilization in detonation physics experiments, 10:40113 (TG;US)
Performance
Type of new Chinese-produced high-speed camera and its utilization in detonation physics experiments, 10:40113 (TG;US)
CANADA

CAPACITORS
Health Hazards
Health-hazard evaluation report HETA 81-415-1385, High Voltage Maintenance Corporation, Mentor, Ohio, 10:40321 (R;US)
CAPSULES
Molecular Structure
Structure of the capsid of Kilham rat virus from small-angle neutron scattering, 10:40208 (J;US)
Radiation Scattering Analysis
Structure of the capsid of Kilham rat virus from small-angle neutron scattering, 10:40208 (J;US)
CARBINOL
See METHANOL
CARBON
See also DIAMONDS
GRAPHITE
Alpha Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
Charged-Particle Transport
Measurement of transition radiation from medium-energy electrons, 10:40883 (J;US)
Projectile charge dependence of heavy ion stopping, 10:40863 (R;GB)
Deuteron Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Gravimetric Analysis
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
Helium 3 Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Pion Minus Reactions
Compton effect on πp meson, 10:40519 (R;SU;In Russian)
Proton Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
CARBON 12
Energy Levels
Excitation of low-lying states of light nuclei in the (e,e'), (π,π') and (γ,π) reactions, 10:40682 (RA;SU;In Russian)
CARBON 12 REACTIONS
Heavy Ion Fusion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Fusion oscillations for symmetric light heavy-ion systems, 10:40694 (RA;SU)
Incomplete Fusion Reactions
Study on reaction mechanism of incomplete fusion reactions; with reaction channel isolation on X-ray radiation of residual nuclei, 10:40761 (RA;SU;In Russian)
Nuclear Molecules
Microscopic molecular picture of the ^{12}C-^{12}C scattering, 10:40669 (RA;FR)
Scattering
Microscopic molecular picture of the ^{12}C-^{12}C scattering, 10:40669 (RA;FR)
CARBON 12 TARGET
Alpha Reactions
Contribution of exchange processes in α-particles elastic scattering on light nuclei, 10:40687 (RA;SU;In Russian)
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Carbon 12 Reactions
Microscopic molecular picture of the ^{12}C-^{12}C scattering, 10:40669 (RA;FR)

Deuteron Reactions
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Giant Resonance
Isospin homogeneity of giant dipole resonances, 10:40681 (RA;SU;In Russian)
Lithium 6 Reactions
Application of the hyperspherical function method to analysis of the $^6Li + {}^{12}C$ elastic scattering at different energies, 10:40690 (RA;SU;In Russian)
Oxygen 16 Reactions
Complete fusion reaction at high energies, 10:40678 (RA;FR)
Photonuclear Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Pion Minus Reactions
Study on the mechanism of π^--meson absorption in the $^{12}C(\pi^-,n\alpha)^7Li$ reaction, 10:40684 (RA;SU;In Russian)
Pion Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Proton Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Interpretation of relation of ^3He and ^4He isotope production in ^{12}C nucleus fragmentation with the help of intranuclear cluster direct knock-out mechanism, 10:40688 (RA;SU;In Russian)
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Sulfur 32 Reactions
Quasi-symmetric two-body fragmentation of the $^{32}S + {}^{12}C$ and $^{32}S + {}^{24}Mg$ composite systems, 10:40702 (RA;FR)

CARBON 13 REACTIONS
Pickup Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)

CARBON 13 TARGET
Nitrogen 14 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)

CARBON 14
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
Mass Spectroscopy
^{14}C sample preparation for analysis by tandem accelerator mass spectrometer (TAMS), 10:39671 (RA;NZ)
Radioactive Waste Disposal
Carbon-14 waste management, 10:38883 (R;XE)
Radioactive Waste Management
Carbon-14 waste management, 10:38883 (R;XE)

CARBON 14 REACTIONS
Charge-Exchange Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)
Pickup Reactions
Single proton pickup reactions from ^{40}Ca and heavy ion detection techniques, 10:40713 (R;US)

CARBON DIOXIDE
Air-Water Interactions
Annual sea ice. An air-sea gas exchange moderator, 10:40184 (RA;US)
Biological Effects
Field studies of sweet potatoes and cowpeas in response to elevated carbon dioxide. Progress report (Ipomoea batatas; Vigna unguiculata), 10:40306 (R;US)
Ecological Concentration
Arctic troposphere carbon dioxide; low altitude aircraft sampling, 10:40124 (RA;US)
Carbon dioxide in arctic and subarctic regions. Final report, 10:40123 (R;US)
Carbon dioxide and methane in the atmosphere and surface ocean waters of the Indian Ocean and Antarctic Regions, 10:40126 (RA;US)
Carbon dioxide and nitrous oxide in the surface waters of the Norwegian, Barents and East Greenland Seas-YMER CRUISES, 10:40185 (RA;US)
PCO_2 in surface water and air, Norwegian and Barents Seas - Winter, 1983, 10:40125 (RA;US)
Sources and sinks of carbon dioxide in the arctic regions, 10:40127 (RA;US)
Environmental Effects
Effect of elevated atmospheric CO_2 on plant communities. Annual report, 1984-1985, 10:40307 (R;US)
Partial Pressure
PCO_2 in surface water and air, Norwegian and Barents Seas - Winter, 1983, 10:40125 (RA;US)
Pollution Sources
Sources and sinks of carbon dioxide in the arctic regions, 10:40127 (RA;US)
Sinks
Sources and sinks of carbon dioxide in the arctic regions, 10:40127 (RA;US)

CARBON DIOXIDE FIXATION
Tracer Techniques
Determination of photosynthesis activity by means of $^{14}CO_2$, 10:40252 (RA;MX;In Spanish)

CARBON IONS
Energy Losses
Projectile charge dependence of heavy ion stopping, 10:40863 (R;GB)
Ion-Atom Collisions
Low energy charge capture cross sections, 10:40437 (R;GB)
Molecular orbitals for charge exchange, 10:40436 (R;GB)

CARBON MONOXIDE
Air Pollution Monitors
Development of a stationary carbon monoxide detector, 10:39786 (R;DE;In German)
Chemical Radiation Effects
Irradiation effect on the reaction of mixture of carbon monoxide and hydrogen, (3). Radiation chemical reaction at elevated pressure under gas circulation, 10:39698 (R;JP;In Japanese)
Chemisorption
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Hydrogenation
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)

CARBON STEELS
Heat Transfer
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)
Stress Analysis
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)
Thermal Analysis
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)

CARBON SULFIDES
Absorption Spectra
Absorption spectra of shocked liquid CS_2, 10:39688 (R;US)
Compression
Absorption spectra of shocked liquid CS_2, 10:39688 (R;US)
Microwave Spectra
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)

CARBONATES
See also AMERICIUM CARBONATES
POTASSIUM CARBONATES
SODIUM CARBONATES
Isotope Ratio
Isotopic study of Karst water. Final report for the period 1 April 1981-31 May 1984, 10:40332 (R;XA)

CARBONIZATION
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Waste Water
Experimental program for the development of an advanced wet carbonization process. Project 61070 topical Phase I report, August 12, 1983-December 31, 1984, 10:38693 (R;US)
CARBONYLS
Only for compounds of metals with carbonyl radicals.
Photochemical Reactions
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)
Pyrolysis
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)
CARCINOMAS
Radioinduction
Radionuclide injury to the lung, 10:40301 (J;US)
CARIBOU
See DEER
CAROLINA POWER LIGHT ROBINSON-2 REACTOR
See ROBINSON-2 REACTOR
CASCADE SOLAR CELLS
Superlattices
Investigation of defects in GaAsP superlattice structures, 10:39002 (R;US)
CASINGS (WELL)
See WELL CASINGS
CASKS
Seals
Factors influencing the design and assessment of elastomer seals for Nuclear Fuel Transport Flasks, 10:39715 (R;GB)
CASTE (INSECTS)
See OCCUPATIONS
CASTINGS
Neutron Radiography
Czechoslovak system for X-ray and neutron nondestructive testing, 10:39763 (RA;SU)
Tracer Techniques
Monitoring of chemical ingot covering using radiotracers, 10:38975 (RA;CS;In Czech)
X-Ray Radiography
Czechoslovak system for X-ray and neutron nondestructive testing, 10:39763 (RA;SU)
CATALYSTS
Chemical Composition
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits (Shell 324 with 12.4% Mo, 2.8% Ni and 2.7% P on an alumina support), 10:38705 (R;US)
Titanium deposition on coal liquefaction catalysts (Shell 328 extrudates with hydrogenated oil, with and without titanium porphyrin), 10:38706 (R;US)
Chemical Preparation
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Comparative Evaluations
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Deactivation
Catalyst deactivation in direct coal liquefaction processes: a quantitative approach to understanding the rate of activity loss (Shell 324M (12.4% Mo, 2.8% Ni on alumina)), 10:38707 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits (Shell 324 with 12.4% Mo, 2.8% Ni and 2.7% P on an alumina support), 10:38705 (R;US)
Titanium deposition on coal liquefaction catalysts (Shell 328 extrudates with hydrogenated oil, with and without titanium porphyrin), 10:38706 (R;US)
PH Value
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
Poisoning
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
Promoters
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Size
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Sulfidation
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Surface Area
Catalytic upgrading of solvent-refined lignite using hydrogen sulfide and prepared iron oxide-supported catalysts, 10:38681 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
CATHODE RAY TUBES
Radiation Hazards
Investigation of radiation emissions from video display terminals, 10:40891 (R;CA)
CATHODES
See also PHOTOCATHODES
Catalysts
Deactivation and poisoning of fuel cell catalysts, 10:39428 (R;US)
CAVITIES

CELLULOSE ESTERS
Electron Dosimetry
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Gamma Dosimetry
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)

CEMENTS
See also PORTLAND CEMENT
Data Acquisition Systems
Description of the data acquisition software for cement-asbestos machines, 10:41089 (R;AT;In German)
Leaching
Equilibrium leach testing of Magnox fuel cladding residues, 10:38868 (R;GB)

CENTRIFUGAL PUMPS
Seals
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)

CENTRIFUGATION
Efficiency of a fluid-fluid centrifugal separation, 10:39681 (R;SE)

CERAMIC MELTERS
Design
Design features of the radioactive Liquid-Fed Ceramic Melter system, 10:38920 (R;US)

CERATITIS CAPITATA
Biological Radiation Effects
Use of rapid quality control in determining mating propensity and mating competitiveness of irradiated Mediterranean fruit flies. Ceratitis capitata (Wiedeman) at various ages, 10:40294 (R;TH;In Thai)
Sterile Male Technique
Use of rapid quality control in determining mating propensity and mating competitiveness of irradiated Mediterranean fruit flies. Ceratitis capitata (Wiedeman) at various ages, 10:40294 (R;TH;In Thai)

CERIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)

CERIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)

CERIUM 145
Radioactivity
Study of transitional nuclei at TRISTAN. Progress report, 10:40729 (R;US)

CERIUM ALLOYS
Fermi Level
Analysis of the series of moderately heavy fermion materials: $CeSn_3$, USn_3, and $NpSn_3$, 10:39491 (R;US)

CERIUM BORIDES
Magnetic Properties
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)
Superconductivity
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)

CERIUM COMPOUNDS
See also CERIUM BORIDES
CERIUM FLUORIDES
Fluorescence
Ce^{+3}- and Tb^{+3}-luminescence in glasses. Ce^{+3}-activated bulk silica and silica thin films. An α-particle detector based on a Ce^{+3}-activated silica thin film. A Ce^{+3}-Tb^{+3}-energy transfer in a high melting point phosphate glass, 10:39889 (R;FR)

CERIUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)

CERIUM ISOTOPES
See also CERIUM 141
CERIUM 145
Energy Levels
Low-lying dipole states of spherical nuclei, 10:40736 (RA;SU;In Russian)
Photonuclear Reactions
Measurement of photonuclear cross sections from 30 to 140 MeV for intermediate and heavy mass nuclei (Sn, Ce, Ta, Pb and U), 10:40769 (R;FR;In French)

CESIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Positron Collisions
Positron annihilation and pressure-induced electronic s-d transition, 10:40465 (R;US)

CESIUM 137
Distribution Functions
Retention of ^{60}Co, ^{85}Sr and ^{137}Cs on inorganic ion exchangers, 10:38892 (R;FR;In French)
Foliar Uptake
Beryllium-7 deposition to terrestrial vegetation in Tennessee, 10:40137 (R;US)
Leaching
Leaching studies of low-level radioactive waste forms, 10:38872 (R;US)
Partition
Development of partitioning method; partitioning test with nuclear fuel reprocessing waste prepared at PNC, 2, 10:38901 (R;JP;In Japanese)
Radioecological Concentration
Freshwater exposure pathways in the Nordic countries, 10:40194 (R;NO)

CESIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)

CESIUM CHLORIDES
Compatibility
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)
Solitons
Narrow and broad solitons in the antiferromagnetic chains of $CsCoCl_3$ and TMMC, 10:39606 (R;FR)

CESIUM ISOTOPES
See also CESIUM 137
CESIUM 141
Isotope Production
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)

CESIUM PHOSPHATES
Phase Transformations
Structural study of the high-pressure antiferroelectric phase of CsH_2PO_4, 10:39604 (R;US)

CHARGE EXCHANGE
Computer Codes
Molecular orbitals for charge exchange, 10:40436 (R;GB)
Molecular Orbital Method
Molecular orbitals for charge exchange, 10:40436 (R;GB)

CHARGE-COUPLED DEVICES
Uses
Prospect for using charge-coupled devices in precise vertex detectors for short-lived particle decays, 10:39906 (R;SU;In Russian)
CHARGED PARTICLE DETECTION
See also ALPHA DETECTION
BETA DETECTION
ELECTRON DETECTION
ION DETECTION
PROTON DETECTION
Charge-Coupled Devices
Prospect for using charge-coupled devices in precise vertex detectors for short-lived particle decays, 10:39906 (R;SU;In Russian)
Drift Chambers
DIOGENE: A 4PI detector for studying central collisions of relativistic heavy ions, 10:40062 (RA;DE)
CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.
See also ALPHA PARTICLES
IONS
TRITONS
Equations of Motion
Invariant for radiation transition in the Coulomb field, 10:40935 (R;SU;In Russian)
CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED PARTICLES
CHARGED-PARTICLE TRANSPORT
Program for processing spectra of characteristic x-radiation induced by accelerated charged particles, 10:40871 (RA;SU;In Russian)
Measuring Methods
In situ investigation of transport in semiconductors: A contactless approach, 10:39627 (J;US)
Trajectories
Numerical study of the mean-trajectory approximation in a nonadiabatic process. Annual technical report, 10:40793 (R;US)
CHARM PARTICLES
See also D MESONS
Particle Identification
Charm, bottom and Higgs search, 10:40578 (RA;DE)
Particle Production
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
Weak Particle Decay
Charm and heavy flavor lifetimes, 10:40509 (R;US)
CHARMONIUM
Spectroscopy
Charmonium spectroscopy in proton-antiproton annihilation, 10:40538 (R;NO)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Combustion Kinetics
Char reactivity determination in a high density combustion furnace, October 1984-April 1985, 10:38764 (RA;US)
Effect of in-situ heat treatment on coal char reactivity. Progress report, October 1, 1984-April 30, 1985, 10:38763 (R;US)
Gasification
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
Heat Treatments
Char reactivity determination in a high density combustion furnace, October 1984-April 1985, 10:38764 (RA;US)
Effect of in-situ heat treatment on coal char reactivity. Progress report, October 1, 1984-April 30, 1985, 10:38763 (R;US)
CHELATING AGENTS
Synthesis
Porous sorbents and membrane supported specific actinide chelators and solvent extractants (H-octadentate catecholamide), 10:39679 (R;US)
CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
ELECTRON MICROPROBE ANALYSIS
NONDESTRUCTIVE ANALYSIS
QUANTITATIVE CHEMICAL ANALYSIS
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
CHEMICAL COMPOSITION
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
CHEMICAL DOSEMETERS
Calibration
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
Response Functions
Environmental effects on the ethanol-monochlorobenzene dosimeter system before, during and after irradiation, 10:39899 (RA;XA)
Testing
Environmental effects on the ethanol-monochlorobenzene dosimeter system before, during and after irradiation, 10:39899 (RA;XA)
CHEMICAL EXPLOSIONS
Detonation Limits
Transition from slow deflagration to detonation. Final report, 10:39364 (R;XE)
Shock Waves
Measurements and calculations of shock propagation in dry desert alluvium, 10:40105 (R;US)
CHEMICAL EXPLOSIVES
See also PETN
TATB
TNT
Chemical Composition
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 10:40108 (R;US)
Combustion Products
Motion of thin metal walls and the equation of state of detonation products (LX-14 containing 95% HMX and 5% polyurethane), 10:40109 (R;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 10:40108 (R;US)
Compressibility
Dynamic and static compressibility of porous granular hexanitrostilbene, 10:40104 (R;US)
Compression
Shock-induced temperature distributions in powder compact recovery fixtures, 10:40103 (R;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 10:40108 (R;US)
Density
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Shock-induced temperature distributions in powder compact recovery fixtures, 10:40103 (R;US)
Detonations
Improved model of mixtures and its application to predict postdetonation behavior of PETN, 10:40114 (J;US)
Modeling short pulse duration shock initiation of solid explosives, 10:40107 (R;US)
Motion of thin metal walls and the equation of state of detonation products (LX-14 containing 95% HMX and 5% polyurethane), 10:40109 (R;US)
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 10:40108 (R;US)
Type of new Chinese-produced high-speed camera and its utilization in detonation physics experiments, 10:40113 (TG;US)

Ignition
Modeling short pulse duration shock initiation of solid explosives, 10:40107 (R;US)
Mechanical Properties
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Sensitivity
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Stability
Properties of plastic-bonded nitroguanidine (NQ/TNT/PVB), 10:40112 (TG;US)
Temperature Distribution
Shock-induced temperature distributions in powder compact recovery fixtures, 10:40103 (R;US)

CHEMICAL FEEDSTOCKS
Photosynthesis
Microalgae and "in vitro" plant cells for the photosynthetic production of chemical products, 10:38998 (R;FR;In French)

CHEMICAL PROPERTIES
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)

CHEMICAL REACTION KINETICS
See also COMBUSTION KINETICS
Measuring Methods
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)

CHEMICAL REACTORS
Comparative Evaluations
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1984, 10:38980 (R;US)
Computerized Simulation
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, April 1-June 30, 1985, 10:38692 (R;US)
Design
Indirect liquefaction of coal: Fischer-Tropsch synthesis in slurry bubble column reactors. Task 1, 10:38701 (RA;US)

CHEMICAL VAPOR DEPOSITION
Chemistry
Advanced Thermionic Technology Program: summary report. Volume 2. Final report, 10:39422 (R;US)

CHEMICALS
See CHELATING AGENTS
SURFACTANTS

CHEMILUMINESCENCE
Radioinduction
Free-radical oxidation in evaluation of the chemiluminescent characteristics of the irradiated animal blood plasma, 10:40290 (RA;SU;In Russian)

CHERENKOV COUNTERS
Computerized Simulation
Analysis of Cherenkov counter efficiencies for E691, 10:39891 (R;US)
Efficiency
Gas threshold Cherenkov 14-channel counter, 10:39990 (R;SU;In Russian)
Specifications
Multichannel threshold gas Cherenkov counter placed in the spectrometric magnetic of the BIS-2 facility, 10:39992 (R;SU;In Russian)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHERENKOV RADIATION
Liquid Scintillation Detectors
Affecting the conditions of detecting with measuring cuvette the Cherenkov radiation due to ^{33}P, 10:39950 (RA;CS;In Czech)

CHEST
Phantoms
Fabrication of a set of realistic torso phantoms for calibration of transuranic nuclide lung counting facilities, 10:40915 (R;US)

CHINA
International Cooperation
US-China's cooperation in unified resource development, 10:38991 (R;US)

CHLOR-ALKALI INDUSTRY
See CHLORINE
SODIUM CARBONATES

CHLORINATED AROMATIC HYDROCARBONS
Environmental Effects
Search for indicatory criteria to predict possible effects of stress on ecosystems. Vol. 6, 10:40313 (R;DE;In German)
Health Hazards
Health-hazard evaluation report HETA 81-415-1385, High Voltage Maintenance Corporation, Mentor, Ohio, 10:40321 (R;US)
Inventories
PCB annual report for Oak Ridge National Laboratory, 1983 (Polychlorinated biphenyl), 10:39642 (R;US)

CHLORINE
Voltametry
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)

CHLORINE CHLORIDES
See CHLORINE

CHONDROSARCOMAS
See SARCOMAS

CHOPPERS (NEUTRON)
See NEUTRON CHOPPERS

CHROMATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Galena/dichromate solution interaction and the nature of the resulting chromium(III) species: an important reaction system in the froth flotation processing of galena, 10:40393 (RA;US)

CHROMIUM
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)
Electronic Structure
Experimental and theoretical investigations of Cr(001) surface electronic structure, 10:39569 (J;US)
Ferromagnetism
Experimental and theoretical investigations of Cr(001) surface electronic structure, 10:39569 (J;US)
Photoelectron Spectroscopy
Experimental and theoretical investigations of Cr(001) surface electronic structure, 10:39569 (J;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

CHROMIUM ALLOYS
See also ALLOY-IN-100
STAINLESS STEELS
Extrusion
Hydrostatic extrusion of amorphous $Fe_{83}B_{12}Si_6$ and $U_{70}Cr_{30}$ ($Fe_{83}B_{12}Si_6$; $U_{70}Cr_{30}$), 10:39567 (R;US)
Grain Boundaries
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Hydrogen Embrittlement
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Intergranular Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)

Physical Radiation Effects
Experimental determination of the critical cavity radius in Fe-10% Cr for ion irradiation, 10:39584 (J;US)
Stress Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)

CHROMIUM-MOLYBDENUM STEELS
Electric Conductivity
Thermal and electrical conductivities of an improved 9 Cr-1 Mo steel from 360 to 1000 K, 10:39582 (J;US)
Mechanical Properties
Survey on structural material investigations for SNR 300, 10:39525 (RA;XA)
Thermal Conductivity
Thermal and electrical conductivities of an improved 9 Cr-1 Mo steel from 360 to 1000 K, 10:39582 (J;US)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHRONIC RADIATION EFFECTS
See DELAYED RADIATION EFFECTS

CIVIL DEFENSE
Shelters
Provision of shelter for critical workers: potential social issues and policy options, 10:41103 (R;US)

CLASSICAL MECHANICS
Coordinates
Dependent coordinates in classical mechanics, 10:40936 (R;SU)
Heisenberg Picture
Quantum-like methods of solution for classical dynamical equations, 10:40940 (R;NO)
Matrices
Dependent coordinates in classical mechanics, 10:40936 (R;SU)

CLAYS
See also BENTONITE
Permeability
Hydrophysical interactions of organic chemicals with geological materials. Research highlights subsurface transport program, 10:40160 (R;US)
Radionuclide Migration
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)

CLINCH RIVER BREEDER REACTOR
Flow Rate
Calculation of pressure drop and flow redistribution in the LMFBR core, 10:39149 (R;BR;In Portuguese)
Pressure Drop
Calculation of pressure drop and flow redistribution in the LMFBR core, 10:39149 (R;BR;In Portuguese)
Reactor Core Disruption
Numerical simulations of the nonlinear dynamic response of the CRBRP head assembly, 10:39249 (R;US)
Reactor Cores
Calculation of pressure drop and flow redistribution in the LMFBR core, 10:39149 (R;BR;In Portuguese)
Reactor Licensing
Structural research needs for Clinch River Breeder Reactor licensing, 10:39155 (J;NL)

CLINTON P. ANDERSON MESON PHYSICS FACILIT
See LAMPF LINAC

CLIPPING CIRCUITS
See PULSE SHAPERS

CLOSED PLASMA DEVICES
See also STELLARATORS
TOKAMAK DEVICES
Magnetic Fields
Study on vacuum magnetic configurations in a six-period geodesic screw tore, 10:40966 (R;SU;In Russian)

CLOSTRIDIUM ACETOBUTYLICUM
Productivity
Agitation and pressure effects on acetone-butanol fermentation (Clostridium acetobutylicum), 10:38987 (J;US)

CLUSTER MODEL
Effective cluster numbers and heavy fragmentation processes of atomic nucleus, 10:40850 (RA;SU;In Russian)

CLUSTERS (STAR)
See STAR CLUSTERS

COAL
See also BROWN COAL
SUBBITUMINOUS COAL
Ash Content
Coal cleaning test facility: 1985 plan, 10:38752 (R;US)
Ashes
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 10:38750 (R;US)
Calorific Value
Coal cleaning test facility: 1985 plan, 10:38752 (R;US)
Carbonization
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Chemical Bonds
Macromolecular structure of low rank coals and lignites. Report period: March 1, 1985-June 1, 1985, 10:38717 (R;US)
Chemical Composition
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)
Chemical Properties
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Cleaning
Coal cleaning test facility: 1985 plan, 10:38752 (R;US)
Combustion
Char reactivity determination in a high density combustion furnace, October 1984-April 1985, 10:38764 (RA;US)
Clean coal use technologies. Volume I, 10:38751 (R;US)
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Effect of in-situ heat treatment on coal char reactivity. Progress report, October 1, 1984-April 30, 1985, 10:38763 (R;US)
Experimental coal-water slurry fired combustor, 10:39471 (RA;US)
Mechanisms governing the destruction of nitrogen species during staged coal combustion, 10:38767 (RA;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Combustion Properties
Coal cleaning test facility: 1985 plan, 10:38752 (R;US)
Cost
Investigation of the Virginia coal industry. Final technical report, May 1, 1984-April 30, 1985, 10:38732 (R;US)
Dehydrogenation
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Depolymerization
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Desulfurization
Intermediates formed during supercritical desulfurization of coal. Seventh quarterly technical progress report, January 1-March 31, 1985, 10:38695 (R;US)
Dusts
Health hazard evaluation report HETA 81-472-1380, Pennsylvania Power and Light, Martins Creek Steam Electric Station, Martins Creek, Pennsylvania, 10:38782 (R;US)

Energy Consumption
Monthly Energy Review, April 1985, 10:39414 (R;US)
Flotation
Preparation of super-clean coal: Zeta potential measurements on miocrobubbles generated using various surfactants. Technical progress report, September 15, 1984-March 14, 1985, 10:38748 (R;US)
Fluidized-Bed Combustion
Testing of Western Kentucky No. 9 coal in an atmospheric fluidized-bed combustor. Technical report, 10:38769 (R;US)
Hydrogenation
Combined processing of coal and heavy resids. Progress report, January 16, 1985-April 15, 1985, 10:38686 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Infrared Spectra
Macromolecular structure of low rank coals and lignites. Report period: March 1, 1985-June 1, 1985, 10:38717 (R;US)
In-Situ Processing
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Macerals
Relationship between reflectivity and organic sulfur content of macerals with respect to total organic sulfur content and rank of coals, 10:38721 (J;US)
Market
Investigation of the Virginia coal industry. Final technical report, May 1, 1984-April 30, 1985, 10:38732 (R;US)
Mechanical Properties
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Molecular Structure
Macromolecular structure of low rank coals and lignites. Report period: March 1, 1985-June 1, 1985, 10:38717 (R;US)
Optical Properties
Relationship between reflectivity and organic sulfur content of macerals with respect to total organic sulfur content and rank of coals, 10:38721 (J;US)
Organic Sulfur Compounds
Relationship between reflectivity and organic sulfur content of macerals with respect to total organic sulfur content and rank of coals, 10:38721 (J;US)
Petrology
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Physical Properties
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Pneumatic Transport
Analysis of dense phase gas-solid flow (Vertical dense phase gas-solid flow), 10:38743 (RA;US)
Analysis of pressure losses in bends for gas-solid flow, 10:38744 (RA;US)
Coal-fluid properties study for DOE. Progress report, 10:38746 (R;US)
Coal-fluid properties study. Final report, 10:38742 (R;US)
Power Generation
Effects of technological change, experience, and environmental regulation on the construction cost of coal-burning generating units, 10:38770 (J;US)
Production
Coal mining in Wyoming, 10:38735 (R;US)
Monthly Energy Review, April 1985, 10:39414 (R;US)
Pyrolysis
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Controlled flash pyrolysis. First quarterly technical progress report, September-December 1980, 10:38683 (R;US)
Pressure pyrolysis of coal, 10:38708 (TJ;GB)
Quantitative Chemical Analysis
Applicability of standard test methods to the analysis of coal samples for coal research, 10:38711 (R;US)
Application of the reference intensity method to coal analysis. Quarterly report, 1 April 1985-30 June 1985, 10:38718 (R;US)
Rail Transport
Investigation of the Virginia coal industry. Final technical report, May 1, 1984-April 30, 1985, 10:38732 (R;US)
Research Programs
Coal research projects: supply, transport and the environment, 10:38733 (R;GB)
Sampling
Achieving reliable and accurate coal sampling and weighing for heat rate determination, 10:39086 (RA;US)
Solvent Extraction
Macromolecular chemistry of coalification. Quarterly report, February 1-April 31, 1985, 10:38697 (R;US)
Staged Combustion
Determination of dispersion coefficients by transient helium tracer pulse, April 1985, 10:38766 (RA;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Structural Chemical Analysis
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Sulfur Content
Coal cleaning test facility: 1985 plan, 10:38752 (R;US)
Supercritical Gas Extraction
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, March 21-June 30, 1985, 10:38698 (R;US)
Weight Measurement
Achieving reliable and accurate coal sampling and weighing for heat rate determination, 10:39086 (RA;US)

COAL CHEMICALS

COAL DEPOSITS
Data Base Management
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Exploration
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Geology
Coal mining in Wyoming, 10:38735 (R;US)
Hydrology
Underground coal gasification, 10:38679 (RA;US)
Information Dissemination
Coal research project. Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Methane
Development and evaluation of technology for methane production from a deep coal seam in the Piceance Basin. Annual report, April 15, 1983-May 31, 1984, 10:38805 (R;US)
Hydrologic characterization of coal seams for methane recovery - Activity 2 topical report: hydrologic constraints and single-phase test procedures. Volume 2. Selected methods for well-test analysis. Final report, March-June 1983, 10:38804 (R;US)
Research Programs
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)

COAL EXTRACTS
Chemical Composition
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Depolymerization
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
NMR Spectra
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

Structural Chemical Analysis
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

COAL FINES

Agglomeration
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Ash Content
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Calorific Value
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Cleaning
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Filtration
Effect of surfactant washing on enhanced dewatering of fine coal (Microstructure and porosity of coal filter cakes), 10:38741 (R;US)

Flotation
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Particle Size
Effect of surfactant washing on enhanced dewatering of fine coal (Microstructure and porosity of coal filter cakes), 10:38741 (R;US)
Polydisperse coal slurry rheology. Quarterly report, 10:38715 (R;US)
Pressurized electroosmotic dewatering (PED) of fine coal suspensions, 10:38754 (R;US)

Pneumatic Transport
Pneumatic conveying activities, 10:39714 (R;GB)

Sulfur Content
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)

Washing
Effect of surfactant washing on enhanced dewatering of fine coal (Microstructure and porosity of coal filter cakes), 10:38741 (R;US)

Water Removal
Effect of surfactant washing on enhanced dewatering of fine coal (Microstructure and porosity of coal filter cakes), 10:38741 (R;US)

COAL GASIFICATION

Pipeline Gas Demonstration Plant, Phase I. Site survey report (Illinois Coal Gasification Group; Perry County), 10:38672 (R;US)
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume IV (Illinois Coal Gasification Group; Perry County), 10:38669 (R;US)
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume III (Illinois Coal Gasification Group; Perry County), 10:38668 (R;US)
Pipeline gas demonstration plant: Phase I. Site transportation study report (Illinois Coal Gasification Group; Perry County), 10:38673 (R;US)
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume V (Illinois Coal Gasification Group; Perry County), 10:38670 (R;US)
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume II, Book 1 (Illinois Coal Gasification Group; Perry County), 10:38710 (R;US)
Pipeline Gas demonstration plant, Phase I. Site environmental survey report (Illinois Coal Gasification Group; Perry County), 10:38675 (R;US)
Pipeline gas demonstration plant, Phase I. Preliminary foundation investigation and soil analysis report. Appendix B (Illinois Coal Gasification Group; Perry County), 10:38676 (R;US)

Design
Pipeline gas demonstration plant: Phase I. Record environmental analysis report. Volume I (Illinois Coal Gasification Group; Perry County), 10:38667 (R;US)

Environmental Impacts
Pipeline gas demonstration plant: Phase I. Record environmental analysis report. Volume II, Book 2 (Illinois Coal Gasification Group; Perry County), 10:38709 (R;US)
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume II, Book 1 (Illinois Coal Gasification Group; Perry County), 10:38710 (R;US)

Foundations
Pipeline gas demonstration plant, Phase I. Preliminary foundation investigation and soil analysis report. Appendix B (Illinois Coal Gasification Group; Perry County), 10:38676 (R;US)

Research Programs
Clean coal use technologies. Volume I, 10:38751 (R;US)
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)

Site Selection
Pipeline gas demonstration plant. Site master plan report (Illinois Coal Gasification Group; Perry County), 10:38677 (R;US)
Pipeline Gas Demonstration Plant, Phase I. Site survey report (Illinois Coal Gasification Group; Perry County), 10:38672 (R;US)

Socio-Economic Factors
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume II, Book 1 (Illinois Coal Gasification Group; Perry County), 10:38710 (R;US)

Solid Wastes
Geochemical properties of coal wastes and the toxicological effects on aquatic life. Environmental geology notes, 10:38728 (R;US)

Water Requirements
Pipeline Gas Demonstration Plant, Phase I. Site water resources report (Illinois Coal Gasification Group; Perry County), 10:38678 (R;US)

Water Resources
Pipeline Gas Demonstration Plant, Phase I. Site water resources report (Illinois Coal Gasification Group; Perry County), 10:38678 (R;US)

COAL GASIFICATION PLANTS

Materials Testing
Corrosion behavior and mechanical properties of silicon carbide exposed to a coal gasification environment, 10:38662 (R;US)
Mechanisms of fatigue in metals under coal liquefaction conditions. Progress report, June 24-August 31, 1981, 10:38682 (R;US)

Water Requirements
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume III (Illinois Coal Gasification Group; Perry County), 10:38668 (R;US)

COAL INDUSTRY
Investigations
Investigation of the Virginia coal industry. Final technical report, May 1, 1984-April 30, 1985, 10:38732 (R;US)
COAL LIQUEFACTION
See also FISCHER-TROPSCH/MOBIL PROCESS
SUPERCRITICAL GAS EXTRACTION
TSL PROCESS
Catalysts
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, April 1-June 30, 1985, 10:38692 (R;US)
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits, 10:38705 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Titanium deposition on coal liquefaction catalysts, 10:38706 (R;US)
Chemical Reaction Kinetics
Isotope effects in supercritical water: kinetic studies of coal liquefaction, 10:38666 (R;US)
Chemical Reactors
Assessment of experimental techniques for the measurement of bubble size in a bubble slurry reactor as applied to indirect coal liquefaction. Final technical report, 10:38700 (R;US)
Assessment of experimental techniques for the measurement of bubble size in a bubble slurry reactor as applied to indirect coal liquefaction. Tasks 2 and 3, 10:38702 (RA;US)
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, April 1-June 30, 1985, 10:38692 (R;US)
Computerized Simulation
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, April 1-June 30, 1985, 10:38692 (R;US)
Data Analysis
Coal liquefaction laboratory studies. Volume 1. Two-stage variations - bituminous coal, 10:38703 (R;US)
Pilot Plants
Optimization and operation of a small-scale test plant for brown coal hydrogenation, 10:38664 (R;DE;In German)
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)
Yields
Isotope effects in supercritical water: kinetic studies of coal liquefaction, 10:38666 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
COAL LIQUEFACTION PLANTS
Centrifugal Pumps
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)
Heaters
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)
Pumps
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)
COAL LIQUIDS
Dehydrogenation
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Distillation
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Fractionation
Estimation of aromatic and hydroaromatic content in complex hydrocarbon samples by liquid chromatography and field-ionization mass spectrometry, 10:38713 (RA;US)
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)
Hydrogenation
Catalytic upgrading of solvent-refined lignite using hydrogen sulfide and prepared iron oxide-supported catalysts, 10:38681 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits, 10:38705 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
Molecular Weight
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
NMR Spectra
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Nuclear Magnetic Resonance
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Physical Properties
Coal liquefaction: investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, April 1-June 30, 1985, 10:38692 (R;US)
Structural Chemical Analysis
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)
Thermodynamic Properties
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Seventh quarterly progress report, March 1-June 1, 1985, 10:38714 (R;US)
COAL MINERS
Life Support Systems
Development of an automated breathing metabolic simulator (ABMS). Open File report, 10:38783 (R;US)
COAL MINES
Noise Pollution Abatement
Reduced-noise auger miner cutting head, 10:38774 (RA;US)
Scrubbers
Feasibility of a machine-mounted scrubber system for ventilating coal-mine working faces. Open File report, 10:38730 (R;US)
Solid Wastes
Geochemical properties of coal wastes and the toxicological effects on aquatic life. Environmental geology notes, 10:38728 (R;US)
Modeling the performance of sediment detention pond. Volume 1. The CSTRS (continuous stirred tank reactors in series) model based on simple reactor theory. Final report, 10:38725 (R;US)
Surface Mining
Dispersion of airborne particulates in surface coal mines: data analysis, 10:38729 (R;US)
Underground Mining
Feasibility of a machine-mounted scrubber system for ventilating coal-mine working faces. Open File report, 10:38730 (R;US)
Standardization of controls for roof-bolter machines: Executive Summary. Volume 1. Open File report, 10:38736 (R;US)
Standardization of controls for roof-bolter machines. Volume 2. Open File report, 10:38737 (R;US)

COAL MINING
Data Base Management
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Information Dissemination
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Research Programs
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
COAL PREPARATION
Agglomeration
Coal cleaning by oil agglomeration. Volume 1. An investigation of the process, with oil recovery. Final report, 10:38753 (R;US)
Data Base Management
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Information Dissemination
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Research Programs
Clean coal use technologies. Volume I, 10:38751 (R;US)
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Coal research projects: Exploration, mining and preparation (1449 projects (total)), 10:38731 (R;GB)
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)
Solid Wastes
Geochemical properties of coal wastes and the toxicological effects on aquatic life. Environmental geology notes, 10:38728 (R;US)
COAL PREPARATION PLANTS
Design
Coal cleaning by oil agglomeration. Volume 1. An investigation of the process, with oil recovery. Final report, 10:38753 (R;US)
Noise Pollution Control
Noise control in coal preparation plants, 10:38780 (RA;US)
Retrofit noise controls for crushing and screening plants, 10:38779 (RA;US)
COAL TAR
Coking
Study of the coking mechanisms of coal tar pitches and its constituents for the purpose of formation of high-grade needle coke and development of in-situ-methods for technical production, 10:38663 (R;DE;In German)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES
COASTAL REGIONS
Anthropology
Impact of coastal geological changes of shoreline environments on man's occupancy. 400 AD to present, NE O'ahu Coast, Hawaii, 10:40202 (RA;NZ)
COATED FUEL PARTICLES
Carburization
Carburization of UO_2 kernels in cracked particles and its effect on xenon release, 10:39132 (R;JP)
COBALT
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Catalytic Effects
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
COBALT 60
Distribution Functions
Retention of ^{60}Co, ^{85}Sr and ^{137}Cs on inorganic ion exchangers, 10:38892 (R;FR;In French)
COBALT BASE ALLOYS
Corrosion
Effect of hot section surface temperature on corrosion and heavy fuel ash deposits, 10:39079 (RA;US)
COBALT CHLORIDES
Solitons
Narrow and broad solitons in the antiferromagnetic chains of $CsCoCl_3$ and TMMC, 10:39606 (R;FR)
COBALT COMPLEXES
Neutron Dosimetry
Neutron dosimetry application of moderation effect of ligands in cobalt(III) complexes, 10:39916 (RA;CS;In Czech)
COBALT OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
COGAS PROCESS
Pipeline gas demonstration plant: Phase I. Record environmental analysis report. Volume II, Book 2, 10:38709 (R;US)
Pipeline gas demonstration plant: Phase I. Record environmental analysis report. Volume I, 10:38667 (R;US)
COKE
Deposition
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
COLD PLASMA
Cyclotron Resonance
Cyclotron resonance in a noneutral plasma, 10:41007 (J;US)
Electric Fields
Cyclotron resonance in a noneutral plasma, 10:41007 (J;US)
Potentials
Cyclotron resonance in a noneutral plasma, 10:41007 (J;US)
COLLECTIVE ACCELERATORS
Beam Dynamics
Collective focusing ion accelerator. Final technical report, July 1, 1981-June 30, 1984, 10:39806 (R;US)
Collective accelerator for electron colliders, 10:39829 (R;US)
Proton Beams
Collective focusing ion accelerator. Final technical report, July 1, 1981-June 30, 1984, 10:39806 (R;US)
Research Programs
Accelerator research studies, 10:39835 (R;US)
COLLEGES
See EDUCATIONAL FACILITIES
COLLIDING BEAMS
Polarized Beams
Possibilities of polarized protons in Sp anti p S and other high energy hadron colliders, 10:39805 (R;US)
COLLIERIES
See COAL MINES
COLLISIONLESS PLASMA
Energy Absorption
Wave absorption at the second harmonic of the electron-cyclotron frequency in a tokamak plasma, 10:40993 (J;US)
COLLOIDS
Electron Microscopy
Electron microscopy of colloids, 10:40072 (RA;CA)
COLOGNE SPIRITS
See ETHANOL
COLORADO
Air Quality
Air quality control from a state regulator's viewpoint, 10:40148 (RA;US)
Environmental Policy
Air quality control from a state regulator's viewpoint, 10:40148 (RA;US)

Lakes
Controls on the variance in chemistry of three lakes in the Flat Tops Wilderness Area, Colorado, 10:40181 (R;US)

COLORIMETRIC DOSEMETERS
Calibration
Dosimetry for electron beam application, 10:39901 (RA;XA)
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
Radiochromic dye dosimetry using triphenylmethane leucocyanides in nylon or polyvinyl butyral, 10:39903 (RA;XA)
Dose-Response Relationships
Dosimetry for electron beam application, 10:39901 (RA;XA)
Effect of humidity on the response of HX dosimetry perspex to radiation, 10:39897 (RA;XA)
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Radiochromic dye dosimetry using triphenylmethane leucocyanides in nylon or polyvinyl butyral, 10:39903 (RA;XA)
Humidity
Effect of humidity on the response of HX dosimetry perspex to radiation, 10:39897 (RA;XA)
Sensitivity
Extending the measuring capacity of TL phosphate glass to the kGy dose range, 10:39928 (RA;CS;In Czech)
Testing
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Radiochromic dye dosimetry using triphenylmethane leucocyanides in nylon or polyvinyl butyral, 10:39903 (RA;XA)

COLORIMETRY
See ABSORPTION SPECTROSCOPY

COLUMBIA RIVER
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBUSTION
See also FLUIDIZED-BED COMBUSTION
STAGED COMBUSTION
Additives
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Efficiency
Combustion testing of coal-water and coal-methanol-water mixtures in oil-designed boilers, 10:38757 (R;US)
Research Programs
Clean coal use technologies. Volume I, 10:38751 (R;US)
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)
Test Facilities
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)

COMBUSTION KINETICS
Proceedings of the joint symposium on stationary combustion NO/sub x/ control. Volume I. NO/sub x/ emission issues and invited papers, 10:38724 (R;US)
Computer Codes
Comparison of the efficiency of numerical methods for integrating chemical kinetic rate equations, 10:39710 (R;US)
Reaction Intermediates
Laser fluorescence studies of the detailed flame chemistry of nitrogen, sulfur, and carbon. Final technical report, March 1, 1982-May 31, 1983, 10:39709 (R;US)

COMBUSTION PRODUCTS
Corrosive Effects
Corrosion of gas turbine components by coal combustion products, 10:39072 (RA;US)
Equations of State
Motion of thin metal walls and the equation of state of detonation products, 10:40109 (R;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 10:40108 (R;US)
Radiant Heat Transfer
Thermal radiation from potassium atoms in MHD systems (With and without potassium seeding), 10:39417 (R;US)

COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Deposits
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Feasibility Studies
Combustion turbine systems modification for direct coal firing, 10:39076 (RA;US)
Oxygen Enrichment
Improved oxygen-separator development program. Topical report, December 1982-April 1983, 10:38808 (R;US)
Performance
Application of advanced slagging combustor to coal-fired gas turbines, 10:39073 (RA;US)
Experimental coal-water slurry fired combustor, 10:39471 (RA;US)

COMMERCE
See TRADE

COMMERCE (NUCLEAR)
See NUCLEAR TRADE

COMMERCIAL BUILDINGS
Cooling Load
Current trends in commercial cool storage. Final report (Use of chilled water and ice storage to reduce demand charges and electric bills; 85 projects), 10:39439 (R;US)
Energy Consumption
Nonresidential Buildings Energy Consumption Survey: characteristics of commercial buildings, 1983, 10:39415 (R;US)
Overview of the United States commercial building population. Topical report, March-October 1984, 10:39451 (R;US)
Surveys
Overview of the United States commercial building population. Topical report, March-October 1984, 10:39451 (R;US)

COMMERCIAL SECTOR
Load Management
Survey of commercial sector demand-side management activities. Final report, 10:39440 (R;US)

COMMISSIONING (REACTOR)
See REACTOR COMMISSIONING

COMMUNITIES (ECOLOGICAL)
See ECOSYSTEMS

COMPLEXING AGENTS
See CHELATING AGENTS

COMPOSITE MATERIALS
Powder Metallurgy
High energy rate densification and forming of metal powders. Final report, 1 June 1963-1 June 1966, 10:39477 (R;US)

COMPOUND NUCLEI
Fragmentation
Quasi-symmetric two-body fragmentation of the $^{32}S + ^{12}C$ and $^{32}S + ^{24}Mg$ composite systems, 10:40702 (RA;FR)
Heavy Ion Reactions
Effect of angular momentum on fission product distribution in heavy ion reactions, 10:40838 (RA;SU;In Russian)
Elastic scattering of compound nuclei, 10:40831 (RA;SU;In Russian)

COMPOUND-NUCLEUS REACTIONS
Computer Codes
CADE - A computer programme for the calculation of nuclear cross-sections from the Weisskopf-Ewing theory, 10:40794 (R;GB)
Total Cross Sections
CADE - A computer programme for the calculation of nuclear cross-sections from the Weisskopf-Ewing theory, 10:40794 (R;GB)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSORS
Bearings
Correction of compressor critical speed condition through fluid-film bearing optimization, 10:38834 (R;US)
COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY
COMPUTER CALCULATIONS
Methods, not results.
Mesh Generation
Construction of the Voronoi mesh on a sphere, 10:40957 (J;US)
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also C CODES
P CODES
R CODES
A Codes
ABAQUS-EPGEN: a general-purpose finite-element code. Volume 4. Systems manual, 10:41083 (R;US)
Approximated neutronic calculation for the tritium breeding ratio in fusion reactor blankets (Using ANISN and MORSE computer codes), 10:41035 (RA;BR;In Portuguese)
Comparison of the results from ABRE-3 computer code with other models and with experimental results, 10:39755 (RA;BR;In Portuguese)
Molecular orbitals for charge exchange, 10:40436 (R;GB)
B Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
C Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
CADE - A computer programme for the calculation of nuclear cross-sections from the Weisskopf-Ewing theory, 10:40794 (R;GB)
CLUST-applied program package for solution of radiation problems in solid-state physics, 10:39505 (R;SU;In Russian)
Design evaluation of diagnostic method and display method for PWR plant computerized operator support system (COSS) in Japan, 10:39321 (RA;HU)
Evaluation and reffinement of the neutronic calculation methodology (LEOPARD and CITATION computer codes), 10:39176 (R;BR;In Portuguese)
Methodology for functional testing of protection and control systems of nuclear power plants. Development of the code CAPTA, 10:39329 (RA;HU)
Modification in the CITATION computer code: change of microscopic cross sections by zone, 10:39178 (RA;BR;In Portuguese)
Programming the diagnosis logic by means of the conversational graphic input to the CRT display device, 10:39320 (RA;HU)
Sensitivity, applicability and validation of bi-Gaussian off- and on-line models for the evaluation of the consequences of accidental releases in nuclear facilities (CAERS code), 10:40139 (R;XE)
Sensitivity and uncertainty studies of the CRAC2 computer code, 10:39355 (R;US)
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)
TORAC User's Manual. A computer code for analyzing tornado-induced flow and material transport in nuclear facilities, 10:39732 (R;US)
Computer Calculations
Development of a methodology to generate materials constant for the FLARE-G computer code, 10:39179 (RA;BR;In Portuguese)
Study and application of Dot 3.5 computer code in radiation shielding problems, 10:39184 (RA;BR;In Portuguese)
E Codes
ECOS: sorption, dose, consumption and miscellaneous data values, 10:38938 (R;GB)
Two-energy group solution of the diffusion equation by the multidimensional nodal polynomial expansion method (EPON computer code), 10:39180 (RA;BR;In Portuguese)
G Codes
Documentation and User's Guide: GS2 and GS3 - variably saturated flow and mass transport models. Final report (including 3 example problems), 10:38914 (R;US)
H Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
K Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
L Codes
Evaluation and reffinement of the neutronic calculation methodology (LEOPARD and CITATION computer codes), 10:39176 (R;BR;In Portuguese)
LISA. A code for safety assessment in nuclear waste disposals program description and user guide, 10:38889 (R;XE)
M Codes
Approximated neutronic calculation for the tritium breeding ratio in fusion reactor blankets (Using ANISN and MORSE computer codes), 10:41035 (RA;BR;In Portuguese)
Neutron-induced photon production in MCNP, 10:40885 (BA;JP)
Spectral method for obtaining three-dimensional magnetohydrodynamic equilibria, 10:40976 (R;US)
Study and application of Morse computer code in radiation shielding problems, 10:40868 (RA;BR;In Portuguese)
Manuals
ABAQUS-EPGEN: a general-purpose finite-element code. Volume 4. Systems manual, 10:41083 (R;US)
O Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
P Codes
A modeling study of the natural state of the Heber geothermal field, California, 10:39034 (BA;US)
PDCRAC: a three-dimensional hydrofracture program. User's manual, 10:38791 (R;US)
R Codes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
REMAND. Computer code for calculations of reactor accidents consequences, 10:39335 (RA;IL)
REPREL computer code: users guide, 10:38949 (R;US)
Utilization of Relap 4 computer code in the water experimental loop at IPEN (Instituto de Pesquisas Energeticas e Nucleares), 10:39123 (RA;BR;In Portuguese)
S Codes
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)
SETS reference manual, 10:39358 (R;US)
SPEEDI: system for prediction of environmental emergency dose information, 10:39342 (R;JP;In Japanese)
Updated users' guide for SAMMY: multilevel R-matrix fits to neutron data using Bayes' equations. Revision 1, 10:40879 (R;US)
Verification of SACI-2 computer code compared with experimental results of Biblis-A and Loop-7 computer code, 10:39314 (RA;BR;In Portuguese)
Sensitivity Analysis
Sensitivity and uncertainty studies of the CRAC2 computer code, 10:39355 (R;US)

V Codes
VERA2D-84: a computer program for two-dimensional analysis of flow, heat, and mass transfer in evaporative cooling towers. Volume 2. User's manual. Final report, 10:39096 (R;US)
Z Codes
Development and test of the ZELT-3D computer code for unfolding power distributions using side reflector instrumentation signals, 10:39186 (RA;BR;In Portuguese)

COMPUTER PROGRAMMING
See PROGRAMMING

COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Programming
Attempt to develop an "intelligent" lens design program, 10:41087 (R;US)
Research Programs
CADCAM integration: test data and product definition data exchange. Pilot project Nos. 4 and 5, 10:39720 (R;US)

COMPUTER-AIDED MANUFACTURING
Research Programs
CADCAM integration: test data and product definition data exchange. Pilot project Nos. 4 and 5, 10:39720 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Design
Design and installation of computer systems to meet the requirements of 10 CFR 73.55 (Computer-managed systems), 10:39211 (R;US)
Man-machine communication improvements in Computerized Operator Support System by new technologies, 10:39200 (RA;HU)
Installation
Design and installation of computer systems to meet the requirements of 10 CFR 73.55 (Computer-managed systems), 10:39211 (R;US)
Performance
Man-machine communication improvements in Computerized Operator Support System by new technologies, 10:39200 (RA;HU)
Specifications
Computerized operator support system for BWR power plant during normal and abnormal conditions, 10:39205 (RA;HU)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
Image Processing
Strategies of reconstruction algorithms for computerized tomography, 10:40215 (R;FR)
Performance
Basic technological aspects and optimization problems in X-ray computed tomography (C.T.), 10:40213 (R;FR)

COMPUTERS
See also MICROPROCESSORS
Comparative Evaluations
Vector computer challenge, 10:39098 (RA;US)
Security
Potential uses of probabilistic risk assessment techniques for space station development, 10:41081 (R;US)
Specifications
Automatic gamma counter NA 3601, 10:40220 (RA;CS;In Czech)

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Spectrally Selective Surfaces
Holographic technology for solar energy concentration. Final report and 1983 annual report, 10:38999 (R;US)

CONCRETE BLOCKS
Thermal Conductivity
Increase in U-value of a wall caused by mortar joints, 10:39619 (R;GB)

CONCRETES
See also REINFORCED CONCRETE
Aging
Viscoelastic creep of high-temperature concrete, 10:39252 (R;US)
Creep
Viscoelastic creep of high-temperature concrete, 10:39252 (R;US)
Fracture Mechanics
Sensitivity of using blunt and sharp crack models in elastic-plastic fracture mechanics, 10:39608 (R;US)
Radiation Transport
Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead, 10:40873 (R;JP)

CONDENSATION CHAMBERS
Restraints
Stress analysis of LOFT condensate receiver seismic restraint, 10:39272 (R;US)

CONDENSATION (VAPOR)
See VAPOR CONDENSATION

CONDENSED AROMATICS
See also ANTHRACENE
BENZOPYRENE
NAPHTHALENE
PYRENE
Dehydrogenation
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984 (Dehydrogenation of 9,10-dihydroanthracene; 3-fluorophenol substituted for phenol depolymerization reaction), 10:38687 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984 (Octahydrophenanthrene), 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction (9-10-dihydroanthracene and octahydrophenanthrene), 10:38689 (R;US)

CONDENSERS
Heat Transfer
Mass and heat transfer in reflux condensers of absorption heat pumps, 10:39752 (R;DE;In German)
Mass Transfer
Mass and heat transfer in reflux condensers of absorption heat pumps, 10:39752 (R;DE;In German)

CONDENSERS (ELECTRIC)
See CAPACITORS

CONDENSERS (STEAM)
See STEAM CONDENSERS

CONDUCTIVITY (THERMAL)
See THERMAL CONDUCTIVITY

CONFERENCES
See MEETINGS

CONFINEMENT TIME
Scaling Laws
Global energy confinement scaling for neural-beam-heated tokamaks, 10:41013 (J;AT)

CONIFERS
See also PINES
Wood Fuels
Fuel models to predict fire behavior in untreated conifer slash. Forest Service research note (final), 10:38990 (R;US)
Wood Wastes
Fuel models to predict fire behavior in untreated conifer slash. Forest Service research note (final), 10:38990 (R;US)

CONNECTICUT
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSOLIDATED FUEL REPROCESSING PROGRAM
Mechanical accessories for mobile teleoperators, 10:38842 (R;US)

CONTACT RADIOTHERAPY
See RADIOTHERAPY

CONTAINERS
See also CAPSULES

CASKS
DEWARS
PRESSURE VESSELS
REACTOR VESSELS
TANKS

Corrosion
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)

Failures
REPREL computer code: users guide, 10:38949 (R;US)

CONTAINMENT
See also CONTAINMENT BUILDINGS
CONTAINMENT SHELLS
CONTAINMENT SYSTEMS

Deformation
Steel containment buckling research program, 10:39189 (J;NL)

Performance Testing
Pneumatic pressure tests of steel containment models - recent developments, 10:39190 (J;NL)

Research Programs
Steel containment buckling research program, 10:39189 (J;NL)

CONTAINMENT BUILDINGS

Failure Mode Analysis
Pretest predictions for the response of a 1:8-scale steel LWR containment building model to static overpressurization, 10:39356 (R;US)

Failures
Probabilistic fracture mechanics. Method and application to the steel containment shell of a PWR-type reactor, 10:39315 (R;DE;In German)

Fracture Mechanics
Probabilistic fracture mechanics. Method and application to the steel containment shell of a PWR-type reactor, 10:39315 (R;DE;In German)

Impact Shock
Response of a reactor building due to detonation of flat layered gas clouds, 10:39341 (R;DE;In German)

Pressure Effects
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)

Reliability
Probability based load factors for design of concrete containment structures, 10:39242 (R;US)

Response Functions
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)
Parameter studies to determine sensitivity of slug impact loads to properties of core surrounding structures, 10:39250 (R;US)

Seismic Effects
Correlation of Fukushima data with SSI models, 10:39243 (R;US)

Strains
Pretest predictions for the response of a 1:8-scale steel LWR containment building model to static overpressurization, 10:39356 (R;US)

CONTAINMENT SHELLS

Aging
Viscoelastic creep of high-temperature concrete, 10:39252 (R;US)

Creep
Viscoelastic creep of high-temperature concrete, 10:39252 (R;US)

Deformation
Experimental investigation of the buckling of nuclear containment-like cylindrical geometries under combined shear and bending, 10:39191 (J;NL)

Nozzles
Analysis of LOFT containment nozzles 11A, 11B, 11D, 12A, 13B, 13C, and 13D by Bijlaard method, 10:39283 (R;US)

Stress Analysis
Analysis of LOFT containment nozzles 11A, 11B, 11D, 12A, 13B, 13C, and 13D by Bijlaard method, 10:39283 (R;US)

CONTAINMENT SYSTEMS

Stress Analysis
Predictions of displacements and stresses in cracked reinforced concrete containment vessels subjected to seismic loads, 10:39188 (J;NL)

CONTAMINATION

Coordinated Research Programs
Health physics research abstracts No. 11, 10:40278 (R;XA)

CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS

CONTENT ANALYSIS
See CHEMICAL ANALYSIS

CONTINENTAL SHELF

Natural Gas Deposits
Estimates of undiscovered, economically recoverable oil and gas resources for the Outer Continental Shelf as of July 1984, 10:38784 (R;US)
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

Petroleum Deposits
Estimates of undiscovered, economically recoverable oil and gas resources for the Outer Continental Shelf as of July 1984, 10:38784 (R;US)
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
US capability to support ocean engineering in the Arctic, 10:38785 (R;US)

CONTINENTAL SLOPE

Baseline Ecology
Assessment of biological processes close to the sea bed in a slope region and its significance to the assessment of sea bed disposal of radioactive waste, 10:38898 (R;GB)

CONTRACTORS

Directories
Listing of awardee names: retired awards as of July 1, 1985, 10:41059 (R;US)

CONTROL ELEMENTS

Stress Analysis
Analysis of the Control Rod Cluster Assembly for combined subcooled blowdown and scram loading, 10:39260 (R;US)

CONTROL ROD DRIVES

Monitors
CRDM reliability study, 10:39279 (R;US)

CONTROL RODS
See CONTROL ELEMENTS

CONTROL ROOMS

Design
Human factors engineering evaluation of an advanced control room, 10:39197 (RA;HU)

Human Factors Engineering
Experimental applications of an expert system to operator problem solving in process control, 10:39290 (R;US)
Human factors engineering evaluation of an advanced control room, 10:39197 (RA;HU)

CONTROL SYSTEMS
For automated processes including feedback.
See also COMPUTERIZED CONTROL SYSTEMS
ENTRY CONTROL SYSTEMS
ON-LINE CONTROL SYSTEMS
REACTOR CONTROL SYSTEMS

Array Processors
Array processor applications in system operation, 10:39099 (RA;US)

Data Processing
Array processor applications in system operation, 10:39099 (RA;US)

Performance Testing
LOFT Vital MG Set transient parameter review, 10:39218 (R;US)

CONTROL THEORY (REACTOR)
See REACTOR KINETICS

CONVEYORS

Pneumatic Transport
Pneumatic conveying activities, 10:39714 (R;GB)

COOLANT CLEANUP SYSTEMS

Intrusion
Monitoring of chemical contaminants in BWRs. Final report, 10:39111 (R;US)

Water Chemistry
Contribution to the investigation of problems concerning the cooling water of the research VVR-S reactor, 10:39233 (R;CS)

COOLANTS
See also specific coolant materials.
Gamma Spectroscopy
Contribution to the investigation of problems concerning the cooling water of the research VVR-S reactor, 10:39233 (R;CS)

COOLERS
See HEAT EXCHANGERS

COOLING LOAD
Load Management
Current trends in commercial cool storage. Final report (Use of chilled water and ice storage to reduce demand charges and electric bills; 85 projects), 10:39439 (R;US)

COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS

COOLING TOWERS
Computer Codes
VERA2D-84: a computer program for two-dimensional analysis of flow, heat, and mass transfer in evaporative cooling towers. Volume 2. User's manual. Final report, 10:39096 (R;US)
Performance
VERA2D-84: a computer program for two-dimensional analysis of flow, heat, and mass transfer in evaporative cooling towers. Volume 2. User's manual. Final report, 10:39096 (R;US)

COPPER
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Alpha Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
Atom Collisions
Compact, inexpensive target design for steady-state heat removal in high-heat-flux fusion applications, 10:41046 (J;US)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Deformation
Threshold stress measurements in shock-deformed copper, 10:39550 (R;US)
Detonations
Multimaterial arbitrary Lagrangian Eulerian code MMALE and its application to some problems of penetration and impact, 10:40102 (R;US)
Deuteron Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Heat Flux
Compact, inexpensive target design for steady-state heat removal in high-heat-flux fusion applications, 10:41046 (J;US)
Heat Transfer
Compact, inexpensive target design for steady-state heat removal in high-heat-flux fusion applications, 10:41046 (J;US)
Helium 3 Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Impact Shock
Multimaterial arbitrary Lagrangian Eulerian code MMALE and its application to some problems of penetration and impact, 10:40102 (R;US)
Microstructure
Threshold stress measurements in shock-deformed copper, 10:39550 (R;US)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Pion Minus Reactions
Compton effect on πp meson, 10:40519 (R;SU;In Russian)
Proton Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Quantitative Chemical Analysis
X-ray fluorescence spectrometric and optical emission spectographic analysis of thoria in thoriated copper metal powder, 10:39644 (R;IN)
Thorium Oxides
X-ray fluorescence spectrometric and optical emission spectographic analysis of thoria in thoriated copper metal powder, 10:39644 (R;IN)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

COPPER 63 TARGET
Photonuclear Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Pion Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Proton Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)

COPPER ALLOYS
Physical Radiation Effects
Order-disorder transformation in CuPd induced by 14 MeV copper ion irradiation, 10:39517 (RA;CA)

COPPER IODIDES
Ionic Conductivity
Molecular dynamics studies of superionic conductors, 10:40929 (BA;US)
Molecular Models
Molecular dynamics studies of superionic conductors, 10:40929 (BA;US)

COPPER ORES
Activation Analysis
Trace-element discrimination of distinct sources of native copper for archaeological provenance, 10:39670 (RA;NZ)

COPPER OXIDES
Electronic Structure
Electronic states of CuO, 10:40467 (J;US)

COPPER VAPOR LASERS
See GAS LASERS

CORE CATCHERS
Heat Transfer
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)
Stress Analysis
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)
Thermal Analysis
Thermal stress analysis of metal basemat concept, 10:39251 (R;US)

CORES (REACTOR)
See REACTOR CORES

CORIUM
Heat Transfer
Experimental investigations at small spheres for the determination of influences on the heat transfer and the heat destorage times in case of quenching, 10:39311 (R;DE;In German)
Quenching
Experimental investigations at small spheres for the determination of influences on the heat transfer and the heat destorage times in case of quenching, 10:39311 (R;DE;In German)

CORN (MAIZE)
See MAIZE
CORN STOVER
See MAIZE
CORTEX (ADRENAL)
See ADRENAL GLANDS
CORUNDUM
Photon Transport
Comparative spectra and total cross sections of pair production by photons in various crystals, 10:40865 (R;SU;In Russian)
COSMIC DUST
Simulation
Preparation, analysis, and release of simulated interplanetary grains into low earth orbit, 10:40411 (R;US)
COSMIC GAMMA BURSTS
X-Ray Spectra
X-ray observations of gamma-ray bursts, 10:40413 (R;US)
COSMIC NUCLEI
Prior to July , 1975 information was indexed to NUCLEI.
Heavy Nuclei
Search and identification of superheavy cosmic nucleus tracks in olivine of the extraterrestrial origin, 10:40409 (RA;SU;In Russian)
Trans 104 Elements
Search and identification of superheavy cosmic nucleus tracks in olivine of the extraterrestrial origin, 10:40409 (RA;SU;In Russian)
COSMIC RAY DETECTION
Salyut Orbital Stations
Radiation dosimetry on board Salyut-7 station during the sixth basic expedition, 10:39925 (RA;CS;In Czech)
COSMIC X-RAY SOURCES
Star Models
Nature of giant lubbles of the Cygnus X source type, 10:40407 (R;SU;In Russian)
COSMOGONY
See COSMOLOGY
COSMOLOGICAL MODELS
Red Shift
Comment on "Microwave background anisotropy and decaying-particle models for a flat universe", 10:40417 (J;US)
COSMOLOGY
Cosmological problems for spontaneously broken supergravity, 10:40404 (R;SU)
Black Holes
Black holes, pregalactic stars, and the dark matter problem, 10:40399 (R;US)
Elementary Particles
Recent heavy-particle decay in a matter-dominated universe, 10:40419 (J;US)
Matter
Shadow world of superstring theories, 10:40424 (J;GB)
Nonluminous Matter
Black holes, pregalactic stars, and the dark matter problem, 10:40399 (R;US)
COSMOS
See UNIVERSE
COULOMB ATTRACTION
See COULOMB FIELD
COULOMB BARRIER
See COULOMB FIELD
COULOMB FIELD
Fourier Transformation
Electron-repulsion integral and the helium atom: the integral transform approach, 10:40440 (R;BR)
COULOMB POTENTIAL
See COULOMB FIELD
COULOMB REPULSION
See COULOMB FIELD
COUMARIN
Fluorescence
Reduction of reabsorption effects in scintillators by employing solutes with large stokes shifts, 10:40051 (J;NL)
Ultraviolet Spectra
Reduction of reabsorption effects in scintillators by employing solutes with large stokes shifts, 10:40051 (J;NL)
COUNTERFLOW COOLING TOWERS
See COOLING TOWERS
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUNTY BUILDINGS
See PUBLIC BUILDINGS
COURT BUILDINGS
See PUBLIC BUILDINGS
CP INVARIANCE
Reviews
CP violation in the standard model and beyond, 10:40582 (RA;DE)
CRACK GROWTH
See CRACK PROPAGATION
CRACK PROPAGATION
Mathematical Models
Sensitivity of using blunt and sharp crack models in elastic-plastic fracture mechanics, 10:39608 (R;US)
CRACKS
Wave Propagation
Theory of elastic wave scattering: Applications of the method of optimal truncation, 10:40925 (J;US)
CRACOW AIC-144 CYCLOTRON
Radiation Hazards
Anticipated radiological hazard in the AIC-144 cyclotron, 10:39793 (R;PL;In Polish)
CREEKS
See STREAMS
CRITICAL ASSEMBLIES
See ZERO POWER REACTORS
CRITICALITY
Alarm Systems
Design criteria and principles for criticality detection and alarm systems, 10:39735 (R;GB)
Radiation Detectors
Design criteria and principles for criticality detection and alarm systems, 10:39735 (R;GB)
CRITICALITY ACCIDENTS
See CRITICALITY
RADIATION ACCIDENTS
CROLOY
Mechanical Properties
Overview of U.S. LMFBR structural materials mechanical properties program, 10:39531 (RA;XA)
CROSS SECTIONS
Partition
Partition of cross sections in asymmetric nucleus-nucleus reactions and the origin of fast alpha particles, 10:40751 (R;US)
CROSSED BEAMS
See COLLIDING BEAMS
CROSSED FIELDS
Plasma Macroinstabilities
Nonlinear saturation of E x B instability in a plasma slab, 10:40978 (R;NO)
CROSSFLOW COOLING TOWERS
See COOLING TOWERS
CRUDE OIL
See PETROLEUM
CRUSHING
Noise Pollution Control
Retrofit noise controls for crushing and screening plants, 10:38779 (RA;US)
CRYOGENIC BUBBLE CHAMBERS
Deuterium Target
Deuterium track sensitive target in a working volume of hydrogen bubble chamber, 10:39998 (R;SU;In Russian)
CRYOGENIC FLUIDS
Level Indicators
Discrete liquid helium level indicator, 10:39721 (R;SU;In Russian)
CRYOGENICS
Advances in cryogenic engineering. Volume 29, 10:39739 (B;US)
CRYOGENS
See CRYOGENIC FLUIDS

CRYOSTATS
Conductor Devices
Cryogenic current leads with a braiding heat exchanger, 10:39725 (R;SU;In Russian)
Design
Cryostat for neutron studies of superfluid helium under a pressure up to 25 atm, 10:39719 (R;SU;In Russian)
CRYSTAL LATTICES
Dynamic Loads
Dynamics of shock-induced energy flux in molecular bonds (Effects in light and heavy atom diatomic lattices at very short times ($\sim 10^{-13}$ s)), 10:40106 (R;US)
Electro-Optical Effects
Crystal class and the electrooptic effect, 10:40920 (R;US)
Shock Waves
Dynamics of shock-induced energy flux in molecular bonds (Effects in light and heavy atom diatomic lattices at very short times ($\sim 10^{-13}$ s)), 10:40106 (R;US)
CRYSTAL MODELS
For theories only.
Eigenvalues
Total-energy differences and eigenvalue sums, 10:40923 (J;US)
Energy Density
Total-energy differences and eigenvalue sums, 10:40923 (J;US)
Renormalization
Comment on 'Convexity of the free energy in some real-space renormalization-group approximations', 10:40916 (R;BR)
CRYSTALLINE ROCKS
See IGNEOUS ROCKS
CRYSTALS
See also LIQUID CRYSTALS
POLYCRYSTALS
Electron Channeling
Above-barrier reflection by the planar channelling of electrons and positrons in crystals, 10:40866 (R;SU;In Russian)
Positron Channeling
Above-barrier reflection by the planar channelling of electrons and positrons in crystals, 10:40866 (R;SU;In Russian)
CURIUM
Ion-Atom Collisions
Anomalous positron peaks from supercritical collision systems, 10:40444 (R;DE)
CURIUM 243
Retention Functions
In vivo measurements of /sup 243,244/Cm retention in the adult baboon, 10:40269 (RA;US)
Tissue Distribution
Analysis of /sup 243,244/Cm in soft tissues and skeleton of the adult baboon, 10:40268 (RA;US)
Radioactivity studies. Progress report, 10:40267 (R;US)
CURIUM 244
Retention Functions
In vivo measurements of /sup 243,244/Cm retention in the adult baboon, 10:40269 (RA;US)
Tissue Distribution
Analysis of /sup 243,244/Cm in soft tissues and skeleton of the adult baboon, 10:40268 (RA;US)
Radioactivity studies. Progress report, 10:40267 (R;US)
CURIUM 248 TARGET
Calcium 48 Reactions
Recent attempts to produce superheavy elements by the $^{48}Ca + ^{248}Cm$ reaction, 10:40789 (RA;SU)
CURRENTS (WATER)
See WATER CURRENTS
CUTTING
Noise Pollution Control
Coal cutting noise control, 10:38775 (RA;US)
CUTTING TOOLS
Design
Coal cutting noise control, 10:38775 (RA;US)
Reduced-noise auger miner cutting head, 10:38774 (RA;US)
Noise Pollution Abatement
Reduced-noise auger miner cutting head, 10:38774 (RA;US)
CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Ion Exchange Chromatography
Determination of cyanide in hydrometallurgical process solutions and effluents by ion chromatography, 10:39674 (R;ZA)
CYCLIC ACCELERATORS
See also BETATRONS
BEVALAC
CYCLOTRONS
SYNCHROTRONS
Betatron Oscillations
Nonlinear effects in large cyclic accelerators, 10:39801 (R;SU;In Russian)
Resonance
Nonlinear effects in large cyclic accelerators, 10:39801 (R;SU;In Russian)
CYCLOPENTADIENE
Dimerization
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, March 21-June 30, 1985, 10:38698 (R;US)
CYCLOTRONS
See also ISOCHRONOUS CYCLOTRONS
Ion Sources
Study on characteristics of valves for pulsed gas feed into a cyclotron multicharged ion source, 10:39855 (R;SU;In Russian)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Fluid Flow
Fluid forces on two circular cylinders in crossflow, 10:39145 (R;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Weak Particle Decay
Observations of a very long-lived D-bar^0 decay to $K^+\pi^+\pi^-\pi^-$ with a proper flight time of 55 x 10^{-13} seconds, 10:40540 (R;GB)
D-1865 RESONANCES
See D MESONS
DAMPERS (GAS FLOW)
See DRAFT CONTROL SYSTEMS
DAMS
Environmental Effects
Modeling the downstream improvements in dissolved oxygen from aeration of Cherokee and Douglas releases, 10:38993 (R;US)
DATA ACQUISITION
Microprocessors
Data acquisition and preliminary processing with 8085 microprocessor in absolute activity measurement, 10:41084 (RA;CS;In Czech)
DATA ACQUISITION SYSTEMS
Control organization in data storage systems for nuclear physics, 10:40075 (R;RO;In Romanian)
CAMAC System
CAMAC based microcomputer data acquisition system for low energy nuclear physics applications, 10:40011 (RA;SU)
Computer Networks
Multicomputer complex for applied problems and automatization of heavy ion accelerator experiments, 10:39853 (RA;SU;In Russian)
Design
E802 data acquisition complex, 10:40663 (R;US)
LEGS data acquisition facility, 10:39833 (R;US)
Multi-Channel Analyzers
CAMAC based microcomputer data acquisition system for low energy nuclear physics applications, 10:40011 (RA;SU)

On-Line Measurement Systems
CAMAC devices for automatization in investigations of reactors and accelerators, 10:39209 (RA;SU;In Russian)
DATA FORMS
Directories
Directory of Energy Data Collection Forms. Forms in use as of April 1985, 10:41069 (R;US)
DATA PROCESSING
Manipulation of unit facts.
See also SPECTRA UNFOLDING
Microprocessors
168/E microcomputer application for experimental data processing, 10:40022 (RA;SU;In Russian)
Data acquisition and preliminary processing with 8085 microprocessor in absolute activity measurement, 10:41084 (RA;CS;In Czech)
Vector Processing
Vector computer challenge, 10:39098 (RA;US)
DATA STORAGE DEVICES
See MEMORY DEVICES
DAYLIGHTING
Computer-Aided Design
Survey of microcomputer based design tools for building energy calculations, 10:39023 (BA;US)
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DECANE
Adsorption
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
DECAY
For nuclear or particle decay only.
See also BETA DECAY
Nuclear Data Collections
Nuclear decay data: some applications and needs, 10:40778 (R;US)
DECOMMISSIONING
See also REACTOR DECOMMISSIONING
Economics
Administrative requirements of financial securities to cover decommissioning operations, 10:39333 (R;BE;In Spanish)
Financing
Ordinance of 5 December 1983 concerning funds for the decommissioning of nuclear installations, 10:39339 (R;XA;In French)
DECONTAMINATION
Decontamination, 10:40898 (RA;MX;In Spanish)
Reagents
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEEP INELASTIC HEAVY ION REACTIONS
Energy and angular distributions in deep inelastic collisons of heavy ions, 10:40830 (RA;SU;In Russian)
Angular Momentum Transfer
What can we learn from spin depolarization measurements in damped nuclear reactions, 10:40749 (RA;FR)
Collective Model
Elastoplasticity tensor for nucleus-nucleus collisions, 10:40805 (RA;FR)
Hartree-Fock Method
Single-particle basis in an approximate treatment of the extended time-dependent Hartree-Fock theory, 10:40804 (RA;FR)
Reviews
New insight into relativistic heavy ion physics through 4π data, 10:40648 (R;DE)
S Matrix
Diffractive, diffusive and statistical aspects of deep-inelastic collisions in a parametrized S-matrix model, 10:40799 (RA;FR)
DEER
Mortality
White-tailed deer (Odocoileus virginianus) on the Department of Energy's Oak Ridge Reservation: 1982 status report, 10:40175 (R;US)
DEFORMED NUCLEI
Energy Levels
Population of magnetic substates in coulomb excitation of nuclei by heavy ions, 10:40826 (RA;SU;In Russian)
Giant Resonance
Effect of hexadecapole nuclear deformation on the giant quadrupole resonance excitation, 10:40813 (RA;SU;In Russian)
Ground States
Correlations in ground states of even-even deformed nuclei, 10:40812 (RA;SU;In Russian)
Heavy Ion Reactions
Population of magnetic substates in coulomb excitation of nuclei by heavy ions, 10:40826 (RA;SU;In Russian)
DEGRADATION (NUCLEAR)
See DECAY
DEHYDROGENASES
See OXIDOREDUCTASES
DEHYDROGENATION
Catalysts
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
DELAWARE
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
DELAY CIRCUITS
Fiber Optics
Low dispersion notch filter for multi-GHz frequencies using fiber optics delays, 10:39804 (R;US)
DELAYED NEUTRON PRECURSORS
Half-Life
Delayed neutron data from TRISTAN, 10:40721 (R;US)
Neutron Emission
Delayed neutron data from TRISTAN, 10:40721 (R;US)
DELAYED RADIATION EFFECTS
Assigned share for radiation as a cause of cancer: review of radioepidemiologic tables assigning probabilities of causation. Final report, 10:40298 (R;US)
Risk Assessment
REMAND. Computer code for calculations of reactor accidents consequences, 10:39335 (RA;IL)
DELAYED RADIATION INJURIES
See DELAYED RADIATION EFFECTS
RADIATION INJURIES
DEMONSTRATION PLANTS
Site Selection
Pipeline gas demonstration plant: Phase I. Site transportation study report (Illinois Coal Gasification Group; Perry County), 10:38673 (R;US)
DENSITY (FLUX)
See FLUX DENSITY
DEOXYPENTOSE NUCLEIC ACID
See DNA
DEOXYRIBONUCLEIC ACID
See DNA
DEPLETED URANIUM
Dimensions
International market survey to assess the procurement of (1) depleted uranium to the dimensions similar to the uranium liner for the DHLW Cask, 10:38862 (R;US)
Procurement
International market survey to assess the procurement of (1) depleted uranium to the dimensions similar to the uranium liner for the DHLW Cask, 10:38862 (R;US)

DEPLETION (NUCLEAR FUELS)
See BURNUP
DEPOLYMERIZATION
Catalysts
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
DEPOSITS (GEOLOGICAL)
See GEOLOGIC DEPOSITS
DEPRESSURIZATION SYSTEMS
Availability
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESIGN BASIS ACCIDENTS
Pressure Gradients
Response of a reactor building due to detonation of flat layered gas clouds, 10:39341 (R;DE;In German)
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Catalysts
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits, 10:38705 (R;US)
Research Programs
Clean coal use technologies. Volume I, 10:38751 (R;US)
DETECTION (RADIATION)
See RADIATION DETECTION
DETECTORS (RADIATION)
See RADIATION DETECTORS
DETONATION WAVES
Biological Effects
Biologic response to complex blast waves, 10:40235 (R;US)
DETONATIONS
By-Products
Improved model of mixtures and its application to predict postdetonation behavior of PETN, 10:40114 (J;US)
Interferometry
Microwave interferometer for shock wave, detonation, and material motion measurements, 10:40098 (J;US)
Photography
Type of new Chinese-produced high-speed camera and its utilization in detonation physics experiments, 10:40113 (TG;US)
DEUTERIUM
Antineutrino-Nucleon Interactions
Nuclear effect study on nucleon structure functions, in comparison with antineutrino interactions on neon and deuterium, 10:40535 (R;FR;In French)
Atom-Molecule Collisions
Dynamics of inelastic $H+D_2$ collisions: Product quantum state distributions at 1.1 and 1.3 eV collision energy, 10:40469 (J;US)
Product state distributions for inelastic and reactive $H+D_2$ collisions as functions of collision energy, 10:40468 (J;US)
Chemical Reactions
Effect of J dependence of Raman cross sections on CARS product quantum state distributions for the $H+D_2 \rightarrow HD+D$ reaction, 10:39691 (J;US)
Compression
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
Isotope Effects
Isotope effects in supercritical water: kinetic studies of coal liquefaction, 10:38666 (R;US)
Optical Properties
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
Polarized Targets
Medium-size polarized deuteron target, 10:39854 (R;SU;In Russian)
Purification
Nuclear spin-polarized HD, D_2, HT and DT solids, liquids and high density gases. Quarterly status report No. 5, March 1, 1985-May 31, 1985, 10:40670 (R;US)
Raman Effect
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
DEUTERIUM COMPOUNDS
Chemical Preparation
Preparation of polymeric deuterium containing compounds, 10:39692 (R;IN)
Polymerization
Preparation of polymeric deuterium containing compounds, 10:39692 (R;IN)
DEUTERIUM IONS
Ion Detection
Ion identification by ambipolar effusion from the positive column in a deuterium glow discharge, 10:40979 (R;NO)
DEUTERIUM TARGET
Antiproton Reactions
Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions, 10:40596 (R;SU;In Russian)
Helium 3 Reactions
Calculation of the $^3He+d \rightarrow {}^3He+p+n$ reaction in the range of neutron resonance interaction with ^3He, 10:40672 (RA;SU;In Russian)
Muon Reactions
New mechanism for resonant $dt\mu$ formation and epithermal effects in muon-catalyzed fusion, 10:40479 (J;US)
Neutrino Reactions
Ratio of the x-distributions for antineutrino interactions in neon and deuterium, 10:40528 (R;SU)
Neutron Reactions
Modelless description of quarted nd-phase at low energies, 10:40671 (RA;SU;In Russian)
Proton Reactions
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)
DEUTERON REACTIONS
Breakup Reactions
Analysis of inclusive spectra of particles from the processes of light ion fragmentation on nuclei at intermediate energies, 10:40739 (RA;SU;In Russian)
Polarizability and deuteron disintegration in elastic scattering in electric field of heavy nuclei, 10:40771 (RA;SU;In Russian)
Knock-Out Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Particle Production
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS
DEVICES
See EQUIPMENT
DEVONIAN SHALES
See BLACK SHALES
DEWAR FLASKS
See DEWARS
DEWARS
Field Tests
Data analyses for Nevada Test Site (NTS) premixed combustion tests, 10:39357 (R;US)
Heat Transfer
Data analyses for Nevada Test Site (NTS) premixed combustion tests, 10:39357 (R;US)
DIAGNOSTIC TECHNIQUES
Forecasting
Perspective of diffusion of imaging technologies, 10:40212 (R;FR)
DIAMONDS
Photon Transport
Comparative spectra and total cross sections of pair production by photons in various crystals, 10:40865 (R;SU;In Russian)

DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS
DIBARYON RESONANCES
Experiment Planning
Search for a strangeness -2 dibaryon, 10:40507 (R;US)
Reviews
Summary of S = 0 dibaryon resonances and candidates, 10:40499 (R;US)
DIELDRIN
Biological Accumulation
Fate of dieldrin in radishes, 10:40245 (RA;XA)
Tracer Techniques
Fate of dieldrin in radishes, 10:40245 (RA;XA)
DIELECTRIC MATERIALS
See also ANTIFERROELECTRIC MATERIALS
Materials research, 10:39065 (R;US)
DIELECTRIC TRACK DETECTORS
Automation
Commercial bacterial colony counter for semi-automatic track counting, 10:40054 (J;GB)
Counting Techniques
Commercial bacterial colony counter for semi-automatic track counting, 10:40054 (J;GB)
LET
LET spectrometry using solid-state track detectors, 10:39934 (RA;CS;In Czech)
Performance
Experience with Czechoslovak solid-state plastic track detectors type CR-39, 10:39947 (RA;CS;In Slovak)
Response Functions
Solid-state track detector response to high-energy charged particles, 10:39938 (RA;CS;In Czech)
DIELECTRICS
See DIELECTRIC MATERIALS
DIESEL ENGINES
Exhaust Gases
Measurement of exhaust emissions from diesel-powered forklifts during operations in ammunition-storage magazines. Final report, 23 July 1984-15 March 1985 on Phase 2, 10:40120 (R;US)
DIESEL FUELS
Prices
Quarterly oil report, first quarter 1985. Volume V, Number 1, 10:38795 (R;US)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFERENTIAL EQUATIONS
See also NEUTRON DIFFUSION EQUATION
Asymptotic Solutions
Asymptotic expansions of solutions of an nth order linear differential equation with power coefficients, 10:40953 (R;FR)
Numerical Solution
Inner/outer iterative methods and numerical Schwarz algorithms - II, 10:41076 (R;US)
Iterative solution and finite element analysis in computational mechanics using supercomputers. Progress report, July 1, 1981-July 31, 1984, 10:41080 (R;US)
DIFFRACTION (ELECTRON)
See ELECTRON DIFFRACTION
DIFFRACTION (X-RAY)
See X-RAY DIFFRACTION
DIFFUSION
See also THERMAL DIFFUSION
Research Programs
[Study of multicomponent diffusion and transport phenomena]. Progress report, 10:39473 (R;US)
DIGESTER GAS
See METHANE
DIMETHYL KETONE
See ACETONE
DIRAC MONOPOLES
See MAGNETIC MONOPOLES
DIRECT CONTACT HEAT EXCHANGERS
Performance
Measurements of gas sorption from seawater and the influence of gas release on open-cycle ocean thermal energy conversion (OC-OTEC) system performance, 10:39018 (R;US)
DIRECTIONAL DRILLING
Drills
Feasibility studies and conceptual design for placing steel liner in long, horizontal boreholes for a prospective nuclear waste repository in tuff, 10:38928 (R;US)
DISINTEGRATION (FISSION)
See FISSION
DISINTEGRATION (NUCLEAR)
See DECAY
DISPERSANTS (CHEMICAL)
See SURFACTANTS
DISPLACEMENT FLUIDS
Salinity
Geothermal injection monitoring with d.c. resistivity methods, 10:39042 (BA;US)
DISPLACEMENT GAGES
Performance
Displacement measurement sensor for use in Loss-of-Fluid-Test reactor, 10:39305 (R;US)
Testing
Displacement measurement sensor for use in Loss-of-Fluid-Test reactor, 10:39305 (R;US)
DISSOLVED MATERIALS
See SOLUTES
DISSOLVED OXYGEN
See OXYGEN
DISSOLVERS
Off-Gas Systems
Separation of krypton from dissolver off-gas of a reprocessing plant using preparative gas chromatography, 10:38843 (R;DE;In German)
DISTRICT HEATING
Heat Pumps
Use of heat pumps in district heat supply, 10:39401 (TJ;GB)
DISTRICT OF COLUMBIA
See WASHINGTON DC
DIVERGENCES (ULTRAVIOLET)
See ULTRAVIOLET DIVERGENCES
DNA
Biological Radiation Effects
Gamma-irradiation and neutron effect on DNA-membrane complexes of mammalian cells, 10:40289 (R;SU;In Russian)
DNA MISMATCH
Biochemistry
Base-pairing properties of O^6-methylguanine during DNA replication in vitro, 10:40205 (R;US)
DNA POLYMERASES
Biochemical Reaction Kinetics
Base-pairing properties of O^6-methylguanine during DNA replication in vitro, 10:40205 (R;US)
DODEWAARD REACTOR
Dodewaard, Gelderland, Netherlands
Financing
Annual report 1983 of GKN, 10:39113 (R;NL;In Dutch)
Reactor Cooling Systems
Annual report 1983 of GKN, 10:39113 (R;NL;In Dutch)
Reactor Maintenance
Annual report 1983 of GKN, 10:39113 (R;NL;In Dutch)
DOEL-1 REACTOR
Doel Beveren, Flandre, Belgium
Reactor Safety
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)
Safety Engineering
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)
DOEL-2 REACTOR
Doel Beveren, Flandre, Belgium
Reactor Safety
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)
Safety Engineering
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)

DOEL-3 REACTOR
Doel Beveren, Flandre, Belgium
Reactor Safety
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)
Safety Engineering
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)
DOLOMITE
Sorptive Properties
Low temperature capture of SO_2 (EER), 10:39101 (RA;US)
DOMESTIC WASTES
See MUNICIPAL WASTES
DOMINIC PROJECT
Nuclear Explosions
Vertical ionospheric sounding measurements, 10:40115 (R;US)
DOPPLER COEFFICIENT
Optimization
Optimization of Doppler reactivity in thermal reactors, 10:39125 (RA;BR;In Portuguese)
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSE LIMITS
Regulations
ICRP recommendations and Canadian regulations, 10:40901 (RA;CA)
Regulations governing radiation dose limits to the individual, 10:40899 (RA;MX;In Spanish)
DOSE RATEMETERS
Specifications
Dose ratemeter NB 9201, 10:39918 (RA;CS;In Czech)
Dosimetric properties of Czechoslovak-made neutron-gamma dose ratemeter NDK 601, 10:39919 (RA;CS;In Czech)
DOSEMETERS
See also BRAGG GRAY CHAMBERS
CALORIMETRIC DOSEMETERS
CHEMICAL DOSEMETERS
COLORIMETRIC DOSEMETERS
EXOELECTRON DOSEMETERS
LUMINESCENT DOSEMETERS
Comparative Evaluations
Analysis of the ability of current health physics instruments to predict dose in exposed individuals, 10:40045 (R;US)
Design
Development of ESR techniques for free radical dosimetry in electron beams, 10:39902 (RA;XA)
Progress in alanine/ESR transfer dosimetry, 10:39900 (RA;XA)
DOSIMETERS
See DOSEMETERS
DOSIMETRY
See also ALPHA DOSIMETRY
ELECTRON DOSIMETRY
GAMMA DOSIMETRY
NEUTRON DOSIMETRY
PERSONNEL DOSIMETRY
Proportional Counters
Use of a tissue-equivalent proportional counter for dose measurement and microdosimetric quantification of mixed radiation fields, 10:39886 (R;CA;FR)
DOUBLE LABELLING
Double labelled sample counting, 10:39961 (RA;MX;In Spanish)
DOUBLET-3 DEVICE
Beam Injection Heating
Regime of improved energy confinement in beam-heated expanded-boundary discharges in Doublet III, 10:41012 (J;AT)
Confinement Time
Regime of improved energy confinement in beam-heated expanded-boundary discharges in Doublet III, 10:41012 (J;AT)
DOUGLAS POINT ONTARIO REACTOR
For information indexed before 1976 CANDU REACTOR was used.
Reactor Maintenance
Remotely controlled repair of piping at Douglas Point, 10:39133 (R;CA)
Remote Handling Equipment
Remotely controlled repair of piping at Douglas Point, 10:39133 (R;CA)
DOUGLAS POINT POWER STATION
See DOUGLAS POINT ONTARIO REACTOR
DRAFT CONTROL SYSTEMS
Energy Conservation
Energy saver draft hood. Final report, 10:39438 (R;US)
DRELL MODEL
Factorization
Factorization of the Drell-Yan cross section, 10:40548 (R;US)
DRIFT CHAMBERS
Efficiency
Electrodeless drift chamber in particle fluxes more than $10^5 s^{-1}$ per wire, 10:39995 (R;SU;In Russian)
Power Supplies
Stabilized high-voltage power supply for proportional and drift chambers, 10:40021 (RA;SU;In Russian)
Pulse Amplifiers
Amplifier-pulse shaper with symmetric feedbacks for drift chambers, 10:39994 (R;SU;In Russian)
Pulse Shapers
Amplifier-pulse shaper with symmetric feedbacks for drift chambers, 10:39994 (R;SU;In Russian)
Specifications
Wide-gap drift chamber with field-forming electrodes on fibreglass, 10:40031 (R;SU;In Russian)
Time-to-Amplitude Converters
Time-of-digit converter with nanosecond resolution, 10:39996 (R;SU;In Russian)
DRILL HOLES
See BOREHOLES
DRILLING (ROCK)
See ROCK DRILLING
DRILLS
See also PERCUSSIVE DRILLS
Design
Feasibility studies and conceptual design for placing steel liner in long, horizontal boreholes for a prospective nuclear waste repository in tuff, 10:38928 (R;US)
DRINKING WATER
Chlorination
Study on the experimental method of chlorine treatment of raw drinking water, 10:40187 (R;JP;In Japanese)
Dehalogenation
Study on the experimental method of chlorine treatment of raw drinking water, 10:40187 (R;JP;In Japanese)
Quantitative Chemical Analysis
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)
Radiation Monitoring
Assessment of radioactivity in the environs of a titanium dioxide plant at Bunbury, Western Australia, 10:40193 (R;AU)
DRY STORAGE
Technology Assessment
Behavior of spent nuclear fuel and storage system components in dry interim storage. Revision 1, 10:38857 (R;US)
DRY-TYPE COOLING TOWERS
See COOLING TOWERS
D-T REACTORS
Radiation Monitors
Recommended program of tritium monitoring research and development, 10:41033 (R;CA)
Tritium monitoring requirements of fusion and the status of research, 10:41032 (R;CA)
DTO
See DEUTERIUM COMPOUNDS
DUBNA SYNCHROCYCLOTRON
Beam Extraction
Preliminary investigations of the JINR phasotron beam spill system, 10:39856 (R;SU;In Russian)
On-Line Measurement Systems
Single computer variant of software for accurate measurement of JINR phasotron subsystem parameters, 10:39796 (R;SU;In Russian)
DUSTS
See also COSMIC DUST

Health Hazards
Health hazard evaluation report HETA 81-472-1380, Pennsylvania Power and Light, Martins Creek Steam Electric Station, Martins Creek, Pennsylvania, 10:38782 (R;US)
DYE LASERS
Mode Selection
Observation of intensity fluctuations and mode correlations in a broadband CW dye laser, 10:39749 (J;NL)
DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMICS
Energy Losses
Mode-locking and the transition to chaos in dissipative systems, 10:40950 (J;SE)
Statistical Models
Sensitive dependence on parameters in nonlinear dynamics, 10:40946 (J;US)
DYNAMICS (BEAM)
See BEAM DYNAMICS
DYONS
Hypothetical particles endowed with both electric and magnetic charges.
Bound State
Monopole-fermion and dyon-fermion bound states. Pt. 5, 10:40561 (R;DE)
DYSPROSIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Electronic Structure
Role of the electronic structure in the relative easiness of the glide systems in hexagonal close-packed metals, 10:39485 (R;FR;In French)
Plasticity
Role of the electronic structure in the relative easiness of the glide systems in hexagonal close-packed metals, 10:39485 (R;FR;In French)
DYSPROSIUM 154
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

E

EARLY RADIATION EFFECTS
Risk Assessment
REMAND. Computer code for calculations of reactor accidents consequences, 10:39335 (RA;IL)
EARLY RADIATION INJURIES
See EARLY RADIATION EFFECTS
RADIATION INJURIES
EARS
See AUDITORY ORGANS
EARTH ATMOSPHERE
See also EARTH MAGNETOSPHERE
IONOSPHERE
Aerosols
Monitoring of the boundary-layer stratification by a scanning Mie lidar during the FOS 83 experiment, 10:40122 (R;FR)
Boundary Layers
Behavior of turbulence statistics in the convective boundary layer, 10:40119 (J;US)
Convection
Behavior of turbulence statistics in the convective boundary layer, 10:40119 (J;US)
Cosmic Dust
Preparation, analysis, and release of simulated interplanetary grains into low earth orbit, 10:40411 (R;US)
Interstellar Grains
Preparation, analysis, and release of simulated interplanetary grains into low earth orbit, 10:40411 (R;US)
Optical Radar
Monitoring of the boundary-layer stratification by a scanning Mie lidar during the FOS 83 experiment, 10:40122 (R;FR)
Radionuclide Migration
Comparison of alternative methods of calculating complementary cumulative distribution functions of health effects following an atmospheric radioactive release, 10:39247 (R;GB)
Data of very low wind velocity and of air tracer concentration in the diffusion experiments under very stable condition. September 1976-October 1981, 10:40142 (R;JP;In Japanese)
Physical model of the dispersion of a radioactive contaminant in the atmosphere above a heat island, 10:40138 (R;XE)
Sensitivity, applicability and validation of bi-Gaussian off- and on-line models for the evaluation of the consequences of accidental releases in nuclear facilities (CAERS code), 10:40139 (R;XE)
Turbulence
Behavior of turbulence statistics in the convective boundary layer, 10:40119 (J;US)
EARTH CRUST
Deformation
Ideal body method for static earth displacements, 10:40366 (RA;US)
EARTH MAGNETOSPHERE
See also MAGNETOTAIL
Charged-Particle Transport
IMS (International Magnetospheric Study) contributions to the understanding of auroral precipitation, transport, and particle sources, 10:40428 (R;US)
Magnetic Fields
Magnetic reconnection in the terrestrial magnetosphere, 10:40430 (R;US)
Magnetic Storms
Magnetospheric impulse response for many levels of geomagnetic activity, 10:40432 (J;US)
Plasma Acceleration
Boundary layers as the primary transport regions of the earth's magnetotail. Scientific report 1977-1979, 10:40429 (R;US)
Solar Wind
Magnetospheric impulse response for many levels of geomagnetic activity, 10:40432 (J;US)
EARTHQUAKES
See also MICROEARTHQUAKES
Hypocenters
Focal mechanism analyses for Virginia and eastern Tennessee earthquakes (1978-1984), 10:40378 (R;US)
Risk Assessment
Guidelines for ground motion definition for the eastern United States, 10:39363 (R;US)
EAST COAST
Seismicity
Guidelines for ground motion definition for the eastern United States, 10:39363 (R;US)
EBIC

ELASTIC SCATTERING
Energy Dependence
Energy dependence of the optical model of neutron scattering from niobium, 10:40723 (R;US)
Mathematical Models
Momentum-space optical potential SND elastic scattering calculations, 10:40860 (J;US)
Optical Models
Energy dependence of the optical model of neutron scattering from niobium, 10:40723 (R;US)
ELECTRIC ARCS
Near Infrared Radiation
Argon arc lamps, 10:40100 (J;US)
Visible Radiation
Argon arc lamps, 10:40100 (J;US)
ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
Materials Testing
Study by optical and scanning electron microscopy of mercury used by amalgamate zinc powders in alkaline cell production, 10:39373 (R;GB;FR)
ELECTRIC CABLES
See also SUPERCONDUCTING CABLES
Backfilling
Backfill materials for underground power cables. Phase 3. Field tests of backfill materials. Final report, 10:39107 (R;US)
Coverings
Study of process variables for flat cable covercoat lamination, 10:39713 (R;US)
Design
Study of process variables for flat cable covercoat lamination, 10:39713 (R;US)
Performance
Design limits of oil/paper high-voltage direct-current cable. Final report, 10:39105 (R;US)
ELECTRIC CHARGES
Role of gravitation in the existence of an electric charge and its magnetic moment. Dynamics, 10:40938 (R;SU;In Russian)
ELECTRIC CONDENSERS
See CAPACITORS
ELECTRIC MONOPOLES
See ELECTRIC CHARGES
ELECTRIC POWER
See also HYDROELECTRIC POWER
Prices
Electricity pricing and the financial health of electric utilities in the United States. Final report, 10:39406 (R;US)
Production
Monthly Energy Review, April 1985, 10:39414 (R;US)
ELECTRIC POWER SYSTEMS
See POWER SYSTEMS
ELECTRIC UTILITIES
Capacity
Region-specific study of the electric utility industry: financial history and future power requirements for the VACAR region, 10:39412 (R;US)
Constraints
Region-specific study of the electric utility industry: problem identification, analysis, and recommendations, 10:39413 (R;US)
Data Compilation
Electric Power Monthly, April 1985, 10:39405 (R;US)
Economics
Region-specific study of the electric utility industry. Phase I, final report, 10:39411 (R;US)
Financial Data
Electricity pricing and the financial health of electric utilities in the United States. Final report, 10:39406 (R;US)
Region-specific study of the electric utility industry: financial history and future power requirements for the VACAR region, 10:39412 (R;US)
Load Management
Current trends in commercial cool storage. Final report, 10:39439 (R;US)
Selected papers on demand-side management. Final report, 10:39408 (R;US)
Survey of commercial sector demand-side management activities. Final report, 10:39440 (R;US)
Marketing Research
Selected papers on demand-side management. Final report, 10:39408 (R;US)
Planning
Selected papers on demand-side management. Final report, 10:39408 (R;US)
Pollution Regulations
Regulatory pressures for increased NO/sub x/ control, 10:40131 (RA;US)
Rate Structure
PURPA Grant Program. Final report, October 1, 1979-January 31, 1982, 10:39407 (R;US)
Recommendations
Region-specific study of the electric utility industry: problem identification, analysis, and recommendations, 10:39413 (R;US)
Regional Analysis
Region-specific study of the electric utility industry. Phase I, final report, 10:39411 (R;US)
Statistical Data
Inventory of power plants in the United States, 1984, 10:39066 (R;US)
Statistics
Electric Power Monthly, April 1985, 10:39405 (R;US)
ELECTRICAL INSULATION
Materials research, 10:39065 (R;US)
ELECTRICAL TESTING
Computer Graphics
Experimental data-logging and processing equipment used in material researches based on electric resistance method, 10:39764 (R;SU;In Russian)
Data Processing
Experimental data-logging and processing equipment used in material researches based on electric resistance method, 10:39764 (R;SU;In Russian)
ELECTRODES
See also ANODES
CATHODES
Interfaces
Fractal model for charge diffusion across a rough interface, 10:39697 (R;US)
Surface Properties
Advanced Thermionic Technology Program: summary report. Volume 1. Final report, 10:39421 (R;US)
ELECTROLYTES
See also SOLID ELECTROLYTES

Interfaces
Fractal model for charge diffusion across a rough interface, 10:39697 (R;US)

ELECTROLYTIC CELLS
Film Flow
Effects of the inhomogeneous current and magnetic field on the flow characteristics of the mercury film of a chlorine alkali electrolysis cell, 10:39758 (R;DE;In German)

ELECTROMAGNETIC FIELDS
Computerized Simulation
Numerical simulation of oscillation fields with azimuthal variations in axially-symmetric resonators. 1. Formulation of the problem and the method of its solution, 10:39808 (R;SU;In Russian)
Finite Element Method
Numerical simulation of oscillation fields with azimuthal variations in axially-symmetric resonators. 1. Formulation of the problem and the method of its solution, 10:39808 (R;SU;In Russian)

ELECTROMAGNETIC SURVEYS
Finite Element Method
Study of the finite-element solution of a 2-1/2 dimensional electromagnetic problem, 10:40375 (RA;US)
Mathematical Models
Accuracy of two line sources for approximating the fields of a large rectangular loop: frequency domain, 10:40376 (RA;US)

ELECTROMAGNETIC TRANSITIONS
See ENERGY-LEVEL TRANSITIONS

ELECTRON ACCEPTOR
See ELECTRONS

ELECTRON BEAM INDUCED CURRENT
See SCANNING ELECTRON MICROSCOPY

ELECTRON BEAMS
Beam Extraction
Radlac II extraction experiments, 10:39880 (R;US)
Beam Neutralization
Numerical simulation of electron-ion beam dynamics, 10:39812 (R;SU;In Russian)
Beam Production
High current density plasma cathode, 10:39882 (J;US)
Beam Transport
Laser-based foilless diode, 10:39824 (R;US)
Bragg Gray Chambers
Ionization chambers for measurement in high-energy electron and photon beams, 10:39924 (RA;CS;In Czech)
Electromagnetic Radiation
Nonlinear theory of relativistic electron beam interaction with a slow electromagnetic wave, 10:39813 (R;SU;In Russian)
Modulation
Nonlinear theory of relativistic electron beam interaction with a slow electromagnetic wave, 10:39813 (R;SU;In Russian)
Oscillation Modes
Nonlinear theory of relativistic electron beam interaction with a slow electromagnetic wave, 10:39813 (R;SU;In Russian)
Radiation Length
Comparison of calculations and measurements of the off-axis radiation dose (Si) in liquid nitrogen as a function of radiation length. Master's thesis, 10:40862 (R;US)

ELECTRON COLLISIONS
Bibliographies
International bulletin on atomic and molecular data for fusion. No. 27, 10:40969 (R;XA)
Inelastic Scattering
Core electron energy loss spectra in metallic La, 10:40867 (R;IT)

ELECTRON CONFIGURATION (ATOMS)
See ELECTRONIC STRUCTURE

ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING

ELECTRON DETACHMENT
A(1 minus) yields A(neutral) + e.
Differential Cross Sections
Study of excitations during collisionally-induced electron detachment of negative ions. Annual report, 1 August 1983-31 July 1984, 10:40435 (R;US)

ELECTRON DETECTION
Mathematical Models
Improved model of electron interaction with matter to be used for calculation of detector's response function, 10:39968 (RA;AT)
Radiation Detectors
Improved model of electron interaction with matter to be used for calculation of detector's response function, 10:39968 (RA;AT)

ELECTRON DIFFRACTION
Data Processing
Computer analysis of electron diffraction patterns, 10:40073 (RA;CA)

ELECTRON DONOR
See ELECTRONS

ELECTRON DOSIMETRY
Calibration Standards
Dosimetry for electron beam application, 10:39901 (RA;XA)
Colorimetric Dosemeters
Dosimetry for electron beam application, 10:39901 (RA;XA)
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Dosemeters
Development of ESR techniques for free radical dosimetry in electron beams, 10:39902 (RA;XA)

ELECTRON GAS
Equations of State
Relativistic Rankine-Hugoniot equations with allowance for radiation and electron-positron pair production, 10:40623 (R;SU;In Russian)

ELECTRON GUNS
Electrostatic Lenses
Study of an electron gun for metal evaporation, 10:40441 (R;BR;In Portuguese)
Specifications
Study of an electron gun for metal evaporation, 10:40441 (R;BR;In Portuguese)

ELECTRON MICROPROBE ANALYSIS
Reviews
Introduction to quantitative microanalysis with the scanning Auger microprobe (SAM), 10:39665 (RA;CA)
Uses
Applications of energy-loss spectroscopy in materials science, 10:39663 (RA;CA)

ELECTRON MICROSCOPY
See also SCANNING ELECTRON MICROSCOPY
TRANSMISSION ELECTRON MICROSCOPY
Biological HVEM. So far and what next (High voltage electron microscopy), 10:40068 (RA;CA)

ELECTRON NEUTRINOS
Leptonic Decay
Possibility of detection of heavy neutrino decays, 10:40569 (R;SU;In Russian)
Mass
Ultralow-background study of neutrinoless double β decay of ^{76}Ge; new limit on the Majorana mass of ν/sub e/, 10:40722 (J;US)
Radiative Decay
Possibility of detection of heavy neutrino decays, 10:40569 (R;SU;In Russian)
Rest Mass
Dirac neutrinos in GUTs, 10:40563 (R;US)

ELECTRON SOURCES
Operation
High current density plasma cathode, 10:39882 (J;US)

ELECTRON SPECTROMETERS
Cylindrical Configuration
Distorted field cylindrical mirror electron spectrometer. Part 1. Calculation of the analyzer, 10:39957 (R;HU)

ELECTRON SPECTROSCOPY
See also AUGER ELECTRON SPECTROSCOPY
Uses
Applications of energy-loss spectroscopy in materials science, 10:39663 (RA;CA)

ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC EQUIPMENT
See also MULTIPLEXERS
OSCILLATORS
POWER SUPPLIES
SCALERS
Meetings
11. International symposium on nuclear electronics, 10:39779 (R;SU)
ELECTRONIC STRUCTURE
For electron configuration in atoms and molecules, and electron band structure in solids.
Hartree-Fock Method
Multiconfiguration Hartree-Fock calculations for complex atoms, 10:40483 (BA;US)
ELECTRON-POSITRON INTERACTIONS
Annihilation
Consequences of models for monojet events from Z boson decay, 10:40502 (R;DE)
Electroweak interference in e^+e^- annihilation, 10:40601 (R;GB)
Observation of Bsup(*) production in e^+e^- interactions above the b-flavor threshold, 10:40537 (R;DE)
Asymmetry
Comments about the electroweak asymmetry in $e^+e^- \rightarrow f$ anti f, 10:40566 (R;US)
Radiative Corrections
Comments about the electroweak asymmetry in $e^+e^- \rightarrow f$ anti f, 10:40566 (R;US)
Reviews
Search for new effects in e^+e^- interactions, 10:40545 (R;US)
ELECTRON-PROTON INTERACTIONS
Electromagnetic Interactions
Electromagnetic probing of hadron structure and nuclear constituents, 10:40573 (RA;DE)
Reviews
Electromagnetic probing of hadron structure and nuclear constituents, 10:40573 (RA;DE)
TeV Range 01-10
Physics of ep collisions in the TeV energy range, 10:40553 (RA;XC)
ELECTRONS
Backscattering
Probability calculation of electron backscattering, 10:40894 (RA;CS;In Czech)
Collisions
Intensive beam dosimetry of accelerated electrons of low energy, 10:40449 (R;RO;In Romanian)
Cyclotron Frequency
Cyclotron motion in a microwave cavity: Possible shifts of the measured electron g factor, 10:40604 (J;US)
Energy Losses
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Equations of Motion
Quantum theory of laser radiation scattering by electrons in magnetic fields, 10:40464 (R;BR)
Gyromagnetic Ratio
Cyclotron motion in a microwave cavity: Possible shifts of the measured electron g factor, 10:40604 (J;US)
Inelastic Scattering
Coincidence form factors in electron scattering. Final report, 10:40643 (R;US)
Transition Radiation
Measurement of transition radiation from medium-energy electrons, 10:40883 (J;US)
ELECTROSTATIC WAVES
See PLASMA WAVES
ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL
ELEMENT 104
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 10:40785 (RA;SU)
ELEMENT 112
Cluster Model
Clusters with mass numbers $5 <= X <= 16$ in atomic nuclei, 10:40716 (RA;SU;In Russian)
ELEMENT 116
Recent findings on the road to the limits of fusion, 10:40788 (RA;SU)
ELEMENTARY PARTICLES

MONJU REACTOR
Failure Mode Analysis
Approach for a microprocessor-based surveillance system for a fast breeder reactor, 10:39328 (RA;HU)
Materials Testing
Overview of fast reactor structural materials programme in India, 10:39527 (RA;XA)
Plutonium Recycle
Fast breeder reactor fuel reprocessing in France, 10:38840 (R;FR)
Reactor Cooling Systems
Approach for a microprocessor-based surveillance system for a fast breeder reactor, 10:39328 (RA;HU)
Reactor Kinetics
Few-group constant preparation for reactor calculation in three-dimensional hexagonal geometry, 10:39148 (R;SU;In Russian)
Reactor Safety
Approach for a microprocessor-based surveillance system for a fast breeder reactor, 10:39328 (RA;HU)
FCA REACTOR
Criticality
Core design and critical experiment on FCA XI-1 Assembly, 10:39230 (R;JP;In Japanese)
Reactor Cores
Core design and critical experiment on FCA XI-1 Assembly, 10:39230 (R;JP;In Japanese)
F-CHART
Modifications
A modification to the f-chart method for domestic hot water systems with stratified storage, 10:39026 (BA;US)
FEDERAL BUILDINGS
Energy Management
FEMP Update: Federal Energy Management activities, January 1985, 10:39431 (R;US)
FEMP Update: Federal Energy Management activities, January 1984, 10:39430 (R;US)
FEDERAL GOVERNMENT
See NATIONAL GOVERNMENT
FEDERAL REPUBLIC OF GERMANY
Nuclear Power Plants
Methods and techniques used in computerized operator support systems for German NPPs, 10:39204 (RA;HU)
FEEDWATER
Availability
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
FELDSPARS
Geochemistry
Chemistry of potassium feldspars from three zoned pegmatites, Black Hills, South Dakota: implications concerning pegmatite evolution, 10:40398 (J;GB)

FERMENTATION ALCOHOL
See ETHANOL
FERMILAB TEVATRON
Stochastic Cooling
Measurement of frequency response of LBL stochastic cooling arrays for TeV-I storage rings, 10:39820 (R;US)
FERRITE GARNETS
Crystal Structure
LSF-spline method for describing annihilation gamma-quanta angular correlation curves for yttrium-aluminium garnets, 10:39614 (RA;SU;In Russian)
FERRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Crystal Lattices
Analytical electron microscopy study of shock synthesized zinc ferrite, 10:39593 (R;US)
Explosive Forming
Analytical electron microscopy study of shock synthesized zinc ferrite, 10:39593 (R;US)
Magnetic properties of shock-synthesized and furnace-reacted zinc ferrite, 10:39590 (R;US)
Synthesis
Chemical synthesis under shock compression, 10:39559 (R;US)
FERROELECTRIC MATERIALS
Piezoelectricity
Classical piezoelectricity: is the theory complete, 10:39625 (R;US)
FERROMAGNETIC MATERIALS
Nonlinear Problems
Nonlinear excitations on a quantum ferromagnetic chain, 10:40928 (J;US)
Solitons
Nonlinear excitations on a quantum ferromagnetic chain, 10:40928 (J;US)
Spin Waves
New technique for excitation of bulk and surface spin waves in ferromagnets, 10:39568 (J;US)
FERTILIZERS
Environmental Effects
Acidifying and neutralizing effects of nitrogen fertilizers on forest soil, 10:40167 (TG;GB)
Labelling
Isotopic techniques in studies of soil fertility and minerals as plant nutrients, 10:40259 (RA;MX;In Spanish)
Tracer Techniques
^{15}N labelled tracer techniques used in the quantitative measurement of nitrogen absorption in wheat crops, 10:40255 (RA;MX;In Spanish)
Fertilizer evaluation of phosphate rock by radioactive tracer techniques, 10:40253 (RA;MX;In Spanish)
Some basic concepts on the ^{15}N isotope, 10:40257 (RA;MX;In Spanish)
FESHBACH-PORTER-WEISSKOPF MODEL
See OPTICAL MODELS
FETUSES
Radionuclide Kinetics
Cross-placental transfer of ^{241}Am in the baboon during late gestational pre-parturition, 10:40272 (RA;US)
FEYNMAN PATH INTEGRAL
Factorization
New procedure for finite-dimensional approximations of path integrals, 10:40629 (R;SU;In Russian)
Fourier Analysis
Fourier path-integral Monte Carlo methods: Partial averaging, 10:40948 (J;US)
Semiclassical Approximation
New procedure for finite-dimensional approximations of path integrals, 10:40629 (R;SU;In Russian)
FFTF REACTOR
After-Heat
Calculational tracking of decay heat for FFTF plant, 10:39220 (R;US)
Fuel Assemblies
Calculational tracking of decay heat for FFTF plant, 10:39220 (R;US)
Loss of Flow
Role of FFTF in assessing structural feedbacks and inherent safety of LMR's, 10:39306 (R;US)
Radiation Protection
Radiation and environmental protection experience at the Fast Flux Test Facility (FFTF), 10:39308 (R;US)
Reactor Charging Machines
Computer control of fuel handling activities at FFTF, 10:39221 (R;US)
Reactor Kinetics
Role of FFTF in assessing structural feedbacks and inherent safety of LMR's, 10:39306 (R;US)
Remote Handling Equipment
Computer control of fuel handling activities at FFTF, 10:39221 (R;US)
FIBER OPTICS
Data Transmission
Fiber optic ring network, 10:41090 (R;US)
Reliability
Estimating the reliability of fiber optics cables, 10:39736 (R;US)
FIBROBLASTS
Biological Radiation Effects
Neoplastic transformation is enhanced by multiple low doses of fission-spectrum neutrons, 10:40299 (J;US)
FIELD EFFECT TRANSISTORS

FISCHER-TROPSCH SYNTHESIS
Bench-Scale Experiments
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1984, 10:38980 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, April 1-June 30, 1984, 10:38978 (R;US)
Catalysts
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1984, 10:38980 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, April 1-June 30, 1984, 10:38978 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, July 1-September 30, 1984, 10:38979 (R;US)
Chemical Reactors
Assessment of experimental techniques for the measurement of bubble size in a bubble slurry reactor as applied to indirect coal liquefaction. Final technical report, 10:38700 (R;US)
Assessment of experimental techniques for the measurement of bubble size in a bubble slurry reactor as applied to indirect coal liquefaction. Tasks 2 and 3, 10:38702 (RA;US)
Indirect liquefaction of coal: Fischer-Tropsch synthesis in slurry bubble column reactors. Task 1, 10:38701 (RA;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, April 1-June 30, 1984, 10:38978 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, July 1-September 30, 1984, 10:38979 (R;US)
Technology Assessment
Indirect liquefaction of coal: Fischer-Tropsch synthesis in slurry bubble column reactors. Task 1, 10:38701 (RA;US)
FISCHER-TROPSCH
MOBIL PROCESS
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1984, 10:38980 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, April 1-June 30, 1984, 10:38978 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, July 1-September 30, 1984, 10:38979 (R;US)
FISHES
Ecology
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Gulf of Mexico) - Sheepshead (Archsargus probatocephalus), 10:40179 (R;US)
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Gulf of Mexico) - southern flounder (Paralichtys lethostigma), 10:40180 (R;US)
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Pacific Southwest) - California grunion (Leuresthes tenuis), 10:40178 (R;US)
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)
FISSION
Fokker-Planck Equation
Dissipative phenomena and kinetic energy, mass and charge equilibration in fission, 10:40786 (RA;SU)
Hartree-Fock Method
Fission of light nuclei with high angular momentum, 10:40798 (RA;FR)
Proton Reactions
Fission of light nuclei with high angular momentum, 10:40798 (RA;FR)
Statistical Models
Phase space model of angular distributions in heavy-ion-induced fission, 10:40767 (RA;FR)
Thermodynamics
New thermodynamical approach to nucleus fission, 10:40839 (RA;SU;In Russian)
FISSION CHAMBERS
Design
Facility for determination of total kinetic energy and anti ν of spontaneous fission for short living transfermium isotopes, 10:40006 (RA;SU;In Russian)
FISSION FOIL DETECTORS
Neutron Fluence
Effect of particle fluence on track diameter and response of electrochemically etched solid-state track detectors, 10:39953 (RA;CS;In Czech)
Response Functions
Effect of particle fluence on track diameter and response of electrochemically etched solid-state track detectors, 10:39953 (RA;CS;In Czech)
Sensitivity
Effect of particle fluence on track diameter and response of electrochemically etched solid-state track detectors, 10:39953 (RA;CS;In Czech)
Specifications
New neutron dosemeter by UVVVR and its dosimetric characteristics with regard to its application in the nation-wide personnel dosimetry service, 10:39923 (RA;CS;In Czech)
FISSION FRAGMENT SPECTROMETERS
Design
Experimental study on the fission characteristics of weakly excited heavy nuclei in heavy ion reactions, 10:40005 (RA;SU;In Russian)
Fission studies with new instruments at I.L.L., 10:40004 (RA;SU)
Performance Testing
Fission studies with new instruments at I.L.L., 10:40004 (RA;SU)
Recording Systems
Unit for two-dimensional address formation in fast monitoring problems during multiparameter mesurements, 10:40007 (RA;SU;In Russian)
FISSION FRAGMENTS
Mass Spectra
Some peculiarities of fission fragment mass distributions of preactinide nuclei, 10:40772 (RA;SU;In Russian)
FISSION NEUTRONS
See also PROMPT NEUTRONS
RBE
Neoplastic transformation is enhanced by multiple low doses of fission-spectrum neutrons, 10:40299 (J;US)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Risk Assessment
Perspectives on source terms based on early research and development, 10:39256 (R;US)
FISSION PRODUCTS
After-Heat
Decay heat calculation with the C.E.A. radioactivity data bank, 10:40655 (RA;JP)
Fission product nuclear data measurements and evaluations at the Studsvik Science Research Laboratory, 10:40654 (RA;JP)
Present status and future programs of evaluation of decay heat for fission products in Japan, 10:40653 (RA;JP)
Some investigations on the contribution of the internal conversion process to the decay heat of a LMFBR, 10:40657 (RA;JP)
Decay
Decay heat calculation with the C.E.A. radioactivity data bank, 10:40655 (RA;JP)
Fission product nuclear data measurements and evaluations at the Studsvik Science Research Laboratory, 10:40654 (RA;JP)
Nuclear decay data: some applications and needs, 10:40778 (R;US)

Present status and future programs of evaluation of decay heat for fission products in Japan, 10:40653 (RA;JP)
Some investigations on the contribution of the internal conversion process to the decay heat of a LMFBR, 10:40657 (RA;JP)
Diffusion
Theoretical studies on fission-product migration in nuclear fuel, 10:39195 (R;DD;In German)
Neutron Reactions
Evaluation of fission product neutron cross sections for JENDL, 10:40652 (RA;JP)
Fission product nuclear data measurements at the JAERI linac, 10:40659 (RA;JP)
Measurements of global fission products cross sections in PWR spectrum, 10:40656 (RA;JP)
Model for fission-product calculations, 10:40658 (RA;JP)
Nuclear Data Collections
Evaluation of fission product neutron cross sections for JENDL, 10:40652 (RA;JP)
Fission product and actinide data status in ENDF/B, 10:40651 (RA;JP)
Present status and future programs of evaluation of decay heat for fission products in Japan, 10:40653 (RA;JP)

FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT

FISSURED FORMATIONS
See FRACTURED RESERVOIRS

FIXATION (CARBON DIOXIDE)
See CARBON DIOXIDE FIXATION

FLAMES
Chemistry
Laser fluorescence studies of the detailed flame chemistry of nitrogen, sulfur, and carbon. Final technical report, March 1, 1982-May 31, 1983, 10:39709 (R;US)
Sound Waves
Coupling of an anchored flame with an acoustic field, 10:39711 (R;GB)
Temperature Measurement
Temperature measurement in flames, January 1985-March 1985, 10:38765 (RA;US)

FLASKS
See CASKS

FLAVONES
Fluorescence
Reduction of reabsorption effects in scintillators by employing solutes with large stokes shifts, 10:40051 (J;NL)
Ultraviolet Spectra
Reduction of reabsorption effects in scintillators by employing solutes with large stokes shifts, 10:40051 (J;NL)

FLOATING NUCLEAR POWER PLANTS
See OFFSHORE NUCLEAR POWER PLANTS

FLOODING FLUIDS
See DISPLACEMENT FLUIDS

FLOODS
Frequency Analysis
Generalized skew coefficient for flood frequency computations for the state of Hawaii, 10:40360 (R;US)

FLORIDA
Aquifers
Distribution and occurrence of total coliform bacteria in Floridan aquifer wells, western Lake County, Florida, 10:40363 (R;US)
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

FLOTATION
Reagents
Preparation of super-clean coal: Zeta potential measurements on miocrobubbles generated using various surfactants. Technical progress report, September 15, 1984-March 14, 1985, 10:38748 (R;US)

FLOW (FLUID)
See FLUID FLOW

FLOW MODELS
Computerized Simulation
Documentation and User's Guide: GS2 and GS3 - variably saturated flow and mass transport models. Final report (including 3 example problems), 10:38914 (R;US)
Mesh Generation
Free-Lagrange methods for compressible hydrodynamics in two space dimensions, 10:40487 (R;US)

FLUE GAS
Denitrification
Proceedings of the joint symposium on stationary combustion NO/sub x/ control. Volume I. NO/sub x/ emission issues and invited papers, 10:38724 (R;US)
Desulfurization
Clean coal use technologies. Volume I, 10:38751 (R;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)
Research Programs
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)

FLUID FLOW
See also GAS FLOW
INCOMPRESSIBLE FLOW
LAMINAR FLOW
MULTIPHASE FLOW
SUPERSONIC FLOW
TWO-PHASE FLOW
Computer Calculations
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)
Computer Codes
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)

FLUIDIZED BED
See FLUIDIZED BEDS

FLUIDIZED BEDS
Mixing
Solids mixing in a three phase fluidized bed containing spherically shaped-porous solid particles. Open File report, 10:39785 (R;US)
Tracer Techniques
Solids mixing in a three phase fluidized bed containing spherically shaped-porous solid particles. Open File report, 10:39785 (R;US)

FLUIDIZED-BED COMBUSTION
Research Programs
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)

FLUIDIZED-BED COMBUSTORS
Refractories
Performance of high and low temperature refractories, 10:38758 (R;US)
Specifications
Performance of high and low temperature refractories, 10:38758 (R;US)

FLUIDS
Not for BODY FLUIDS.

Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

FLUORINATED ALIPHATIC HYDROCARBONS
Piezoelectricity
Studies of the Bauer piezoelectric polymer gauge (PVF_2) under impact loading, 10:40095 (R;US)

FLUORINATED AROMATIC HYDROCARBONS
NMR Spectra
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

FLUORINE
Ion Selective Electrode Analysis
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)

FLUORINE FLUORIDES
See FLUORINE

FLUORITE
Activation Analysis
Methodological aspects and development of techniques for neutron activation analysis of microcomponents in materials of geologic origin, 10:39647 (R;AR;In Spanish)

FLUX DENSITY
Use in coordination with the flux considered, e.g. MAGNETIC FLUX, NEUTRON FLUX, etc.
Activation Detectors
Use of activation detectors for low neutron flux densities, 10:39930 (RA;CS;In Czech)

FLUX (NEUTRON)
See NEUTRON FLUX

FLY ASH
Chemical Composition
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
Uses
Brown coal fly ash in soil stabilization, 10:38726 (R;US)

FOCK METHOD
See HARTREE-FOCK METHOD

FOCK SELF-CONSISTENT FIELD
See HARTREE-FOCK METHOD

FOILS
Thinner than PLATES or SHEETS.
Acceleration
Velocity measurements of laser driven flyers backed by high impedance windows, 10:41044 (R;US)

FOOD INDUSTRY
Energy Consumption
Omnibus survey in 600 bakeries, 10:39460 (R;DE;In German)

FOREST LITTER
Natural organic debris on the forest floor.
Decomposition
Leaf litter disappearance in a tropical montane rain forest, 10:40152 (R;US)

FORESTS
Mineral Cycling
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)
Resource Assessment
Assessment of potential biomass energy impacts on the forest resource of the 201-county Tennessee Valley region, 10:39003 (R;US)

FORSMARK-3 REACTOR
Oesthammar, Uppsala, Sweden
Computerized Control Systems
Man-machine communication at Forsmark 3, 10:39201 (RA;HU)

Man-machine communication at Forsmark 3, 10:39201 (RA;HU)
Design
Man-machine communication at Forsmark 3, 10:39201 (RA;HU)
Process Computers
Plant computer man-machine communication at Forsmark 3, 10:39202 (RA;HU)

FOSSIL-FUEL POWER PLANTS
Air Pollution Abatement
"Control-or-retire" strategy for reducing sulfur dioxide emissions from power plants, 10:40121 (R;US)
Air Pollution Control
Low temperature capture of SO_2 (EER), 10:39101 (RA;US)
Boiler Fuels
Achieving reliable and accurate coal sampling and weighing for heat rate determination, 10:39086 (RA;US)
Data Compilation
Electric Power Monthly, April 1985, 10:39405 (R;US)
Economics
Effects of technological change, experience, and environmental regulation on the construction cost of coal-burning generating units, 10:38770 (J;US)
Flue Gas
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)
Gas Turbines
Evaluation, 10:39068 (RA;US)
Performance
Can a small utility afford a heat rate improvement program, 10:39087 (RA;US)
Development and implementation of a heat rate accounting program, 10:39091 (RA;US)
Effect of heat rate data errors on economic dispatch, 10:39094 (RA;US)
Guidelines for initiating and improving formal heat rate improvement programs, 10:39083 (RA;US)
Heat rate improvement of fossil-fired power plants, 10:39082 (RA;US)
Motivation for performance: its ups and downs, 10:39090 (RA;US)
Performance regulation in Massachusetts, 10:39085 (RA;US)
Public Service Indiana's turbine performance testing, 10:39088 (RA;US)
Survey of regulatory agency review of generating unit performance, 10:39084 (RA;US)
Personnel
Motivation for performance: its ups and downs, 10:39090 (RA;US)
Regulations
Effects of technological change, experience, and environmental regulation on the construction cost of coal-burning generating units, 10:38770 (J;US)
Performance regulation in Massachusetts, 10:39085 (RA;US)
Risk Assessment
Analysis of routine occupational risks associated with selected electrical energy systems. Final report, 10:40201 (R;US)
Standards
Survey of regulatory agency review of generating unit performance, 10:39084 (RA;US)
Statistical Data
Inventory of power plants in the United States, 1984, 10:39066 (R;US)
Statistics
Electric Power Monthly, April 1985, 10:39405 (R;US)
Steam Condensers
Condenser performance awareness, testing, and data evaluation, 10:39093 (RA;US)

Steam Turbines
Application of turbine test results to improve performance, 10:39089 (RA;US)
Diagnosis of turbine problems as determined from monitoring results, 10:39095 (RA;US)
Turbine performance monitoring methods and instrumentation, 10:39092 (RA;US)
Technology Assessment
Effects of technological change, experience, and environmental regulation on the construction cost of coal-burning generating units, 10:38770 (J;US)
Thermal Efficiency
Achieving reliable and accurate coal sampling and weighing for heat rate determination, 10:39086 (RA;US)
Application of turbine test results to improve performance, 10:39089 (RA;US)
Can a small utility afford a heat rate improvement program, 10:39087 (RA;US)
Development and implementation of a heat rate accounting program, 10:39091 (RA;US)
Effect of heat rate data errors on economic dispatch, 10:39094 (RA;US)
Guidelines for initiating and improving formal heat rate improvement programs, 10:39083 (RA;US)
Heat rate improvement of fossil-fired power plants, 10:39082 (RA;US)
Public Service Indiana's turbine performance testing, 10:39088 (RA;US)

FOSSILS
Isotope Dating
Archaeometry. Past achievements and future prospects, 10:40338 (RA;NZ)
Radiocarbon dating of fossil bone apatite, 10:40336 (RA;NZ)

FRACTURED FORMATIONS
See FRACTURED RESERVOIRS

FRACTURED RESERVOIRS
Fluid Injection
Injection testing in 1982 at the Svartsengi high-temperature field in Iceland, 10:39052 (BA;US)
Mass Transfer
New mechanical transport model for networks of fractures, 10:40346 (RA;US)
Well Pressure
Well-test data analysis from naturally fractured reservoirs, 10:40345 (RA;US)
Well Temperature
Well-test data analysis from naturally fractured reservoirs, 10:40345 (RA;US)

FRAGMENTATION
Mathematical Models
Geometric statistics and dynamic fragmentation, 10:40926 (J;US)
Statistics
Geometric statistics and dynamic fragmentation, 10:40926 (J;US)

FRAGMENTS (DECAY)
See DECAY

FRAGMENTS (FISSION)
See FISSION FRAGMENTS

FRAGMENTS (PARTICLES)
See PARTICLES

FRANCE
Radiation Monitoring
3. Quarterly progress report 1984. [Radiation Monitoring in Environment], 10:40146 (R;FR;In French)
Monthly results of measurements, October 1984, 10:40145 (R;FR;In French)
Monthly results of measurements, September 1984, 10:40144 (R;FR;In French)
Monthly results of measurements, August 1984, 10:40143 (R;FR;In French)

FRANCKENSTEIN
See SCANNING MEASURING PROJECTORS

FREE ELECTRON LASERS
Design
Low-voltage free-electron laser development. Final report, 1 February 1982-31 October 1984, 10:39741 (R;US)

FREE RADICALS
See RADICALS

FREEZING
Integral Equations
Comment on the consistency of truncated nonlinear integral equation based theories of freezing, 10:40943 (J;US)

FREONS
Neutrino Reactions
Estimate of hadron formation length in neutrino interactions, 10:40521 (R;SU;In Russian)
Properties of multiplicity distributions in nuA and antinuA interactions at Esub((anti nu)) <= 30 GeV, 10:40520 (R;SU)

FRESH WATER
Quantitative Chemical Analysis
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)

FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS

FRICKE DOSEMETERS
See CHEMICAL DOSEMETERS

FROGS
Food Processing
Elimination of Salmonella in froglegs by irradiation. Coordinated programme on factors influencing the utilization of food irradiation processes. Final report for the period 1 November 1980-31 October 1984, 10:40279 (R;XA)
Radiosterilization
Elimination of Salmonella in froglegs by irradiation. Coordinated programme on factors influencing the utilization of food irradiation processes. Final report for the period 1 November 1980-31 October 1984, 10:40279 (R;XA)

FRUIT TREES
Plant Breeding
Quince tree (cydonia oblonga Mill.)-breeding bases: seed propagation, cytogenetics and radiosensitivity, 10:40282 (R;BR;In Portuguese)
Radiosensitivity
Quince tree (cydonia oblonga Mill.)-breeding bases: seed propagation, cytogenetics and radiosensitivity, 10:40282 (R;BR;In Portuguese)

FTR REACTOR (RICHLAND)
See FFTF REACTOR

FUEL CANS
Swelling
CANSWEL-2: a computer model of the creep deformation of Zircaloy cladding under loss-of-coolant accident conditions, 10:39347 (R;GB)

FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Performance Testing
Molten carbonate fuel cell system verification and scale-up. Final report, 10:39427 (R;US)
Processing
Fuel processor development for 11-MW fuel cell power plants, 10:39426 (R;US)

FUEL CELLS
See also ACID ELECTROLYTE FUEL CELLS
Materials Testing
Study by optical and scanning electron microscopy of mercury used by amalgamate zinc powders in alkaline cell production, 10:39373 (R;GB;FR)
Research Programs
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE
See also PLUTONIUM RECYCLE
Spanish Organizations
Decree 3322/1971 of 23 December on the purposes of the National Uranium Enterprise, 10:38829 (R;XA;In Spanish)

FUEL ELEMENT FAILURE
Research Programs
Research and development into power reactor fuel performance, 10:39238 (R;CA)

FUEL ELEMENTS
See also FUEL RODS
SPENT FUEL ELEMENTS
Burnup
Model to calculate the burn of gadolinium in PWR, 10:39122 (RA;BR;In Portuguese)
Dynamics
Integral description of the operational behaviour of fuel rods in thermal reactors, 10:39194 (R;DE;In German)
Fission Product Release
Experimental investigation on the release of actinide and cesium from irradiated particles of spherical fuel element of high temperature reactor, 10:39131 (RA;BR;In Portuguese)
Nondestructive Analysis
Measurement of enriched uranium and uranium-aluminum fuel materials with the AWCC, 10:38961 (R;US)
Performance
Performance and management of IPR-R1 fuel elements, 10:39225 (RA;BR;In Portuguese)
Thermodynamics
Integral description of the operational behaviour of fuel rods in thermal reactors, 10:39194 (R;DE;In German)
FUEL OILS
See also RESIDUAL FUELS
Chemical Reaction Yield
Combined processing of coal and heavy resids. Progress report, January 16, 1985-April 15, 1985, 10:38686 (R;US)
Data Compilation
Petroleum Supply Monthly, May 1985, 10:38794 (R;US)
Feasibility Studies
Coal cleaning by oil agglomeration. Volume 1. An investigation of the process, with oil recovery. Final report, 10:38753 (R;US)
Recovery
Coal cleaning by oil agglomeration. Volume 1. An investigation of the process, with oil recovery. Final report, 10:38753 (R;US)
FUEL PELLETS
Dynamics
Integral description of the operational behaviour of fuel rods in thermal reactors, 10:39194 (R;DE;In German)
Thermodynamics
Integral description of the operational behaviour of fuel rods in thermal reactors, 10:39194 (R;DE;In German)
FUEL REPROCESSING PLANTS
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Materials Testing
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Off-Gas Systems
Separation of krypton from dissolver off-gas of a reprocessing plant using preparative gas chromatography, 10:38843 (R;DE;In German)
Remote Handling Equipment
Mechanical accessories for mobile teleoperators, 10:38842 (R;US)
Safety
Application of probabilistic risk assessments in demonstrating the adequacy of safety in the design of nuclear chemical plants, 10:38952 (RA;US)
FUEL RODS
Heat Transfer
Comparison of the results from ABRE-3 computer code with other models and with experimental results, 10:39755 (RA;BR;In Portuguese)
Thermal behavior simulation of a nuclear fuel rod through an electrically heated rod, 10:39192 (R;BR;In Portuguese)
Optimization
Optimization of some parameters of the radioisotope production reactor (RPR) model, 10:39235 (RA;BR;In Portuguese)
Pressure Measurement
Compensation techniques for improving pressure sensors accuracy during LOFT LOCA transient, 10:39304 (R;US)
Rewetting
Comparison of the results from ABRE-3 computer code with other models and with experimental results, 10:39755 (RA;BR;In Portuguese)
Temperature Distribution
Temperature distribution in cylindrical fuel rods - A variational treatment, 10:39193 (RA;BR;In Portuguese)
FUEL SHEATHS
See FUEL CANS
FUEL SLUGS
See FUEL RODS
FUEL SLURRIES
Atomization
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Chemical Preparation
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 10:38750 (R;US)
Combustion
Combustion testing of coal-water and coal-methanol-water mixtures in oil-designed boilers, 10:38757 (R;US)
Experimental coal-water slurry fired combustor, 10:39471 (RA;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Combustion Properties
Combustion testing of coal-water and coal-methanol-water mixtures in oil-designed boilers, 10:38757 (R;US)
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Fuel Additives
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Rheology
Polydisperse coal slurry rheology. Quarterly report, 10:38715 (R;US)
Sedimentation
Analysis of coal-oil mixture sedimentation by continuity wave theory, 10:38745 (RA;US)
Coal-fluid properties study for DOE. Progress report, 10:38746 (R;US)
Coal-fluid properties study. Final report, 10:38742 (R;US)
Shear
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Stability
Analysis of coal-oil mixture sedimentation by continuity wave theory, 10:38745 (RA;US)
Coal-fluid properties study for DOE. Progress report, 10:38746 (R;US)
Coal-fluid properties study. Final report, 10:38742 (R;US)
Staged Combustion
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Surface Tension
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Testing
Coal water mixture development. Quarterly technical progress report, 10:38747 (R;US)
Viscosity
Coal water mixture development. Quarterly technical progress report, 10:38747 (R;US)
Polydisperse coal slurry rheology. Quarterly report, 10:38715 (R;US)
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Water Removal
Pressurized electroosmotic dewatering (PED) of fine coal suspensions, 10:38754 (R;US)

FUEL SUBSTITUTION
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
FUEL SUSPENSIONS
See FUEL SLURRIES
FUELS (NUCLEAR)
See NUCLEAR FUELS
FUELWOOD
See WOOD FUELS
FUGEN ATR
See JATR REACTOR
FUKUSHIMA-1 REACTOR
Okuma, Fukushima, Japan
Containment Buildings
Correlation of Fukushima data with SSI models, 10:39243 (R;US)
Seismic Effects
Correlation of Fukushima data with SSI models, 10:39243 (R;US)
FUNDAMENTAL PARTICLES
See ELEMENTARY PARTICLES
FURNACES
See also GAS FURNACES
OIL FURNACES
Fouling
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)
FUSION FUELS
See THERMONUCLEAR FUELS
FUSION REACTIONS
See HEAVY ION FUSION REACTIONS

FUSION (WELDING)
See WELDING

G

GADOLINIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Burnup
Model to calculate the burn of gadolinium in PWR, 10:39122 (RA;BR;In Portuguese)
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
Equations of State
New equations of state for Eu, Gd, and Ho, 10:40458 (R;US)
Magnetic Properties
Temperature dependence of the magnetic excitations in gadolinium, 10:39572 (J;US)
Spin Waves
Temperature dependence of the magnetic excitations in gadolinium, 10:39572 (J;US)
GADOLINIUM 144
High Spin States
Behaviour of ^{144}Gd at very high angular momentum. Study of the continuum, 10:40728 (R;FR;In French)
GADOLINIUM 152
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
GADOLINIUM 158 TARGET
Carbon 12 Reactions
Gasdynamic model of intermediate energy heavy ion collisions and high-energy particle emission, 10:40847 (RA;SU;In Russian)
GADOLINIUM BROMIDES
Hydrolysis
Studies on the vapour phase hydrolysis of some lanthanide and actinide (III) bromides, 10:39703 (R;DE;In German)
GADOLINIUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
GALACTIC EVOLUTION
Elementary Particles
Recent heavy-particle decay in a matter-dominated universe, 10:40419 (J;US)
GALAXY NUCLEI
Central part of galaxies.
Cosmic Photons
Observations of galactic center for annihilation line at 0.511 MeV, 10:40402 (R;BR)
Star Accretion
Two-phase accretion model for emission-line regions in quasars and active galactic nuclei, 10:40420 (J;US)
GALENA
Chemical Reactions
Galena/dichromate solution interaction and the nature of the resulting chromium(III) species: an important reaction system in the froth flotation processing of galena, 10:40393 (RA;US)
Ore Processing
Galena/dichromate solution interaction and the nature of the resulting chromium(III) species: an important reaction system in the froth flotation processing of galena, 10:40393 (RA;US)
GALLIUM 67
Isotope Production
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
Production of ^{67}Ga at the Oslo Cyclotron, 10:39706 (R;NO)
Tissue Distribution
Investigation of protein binding of radiogallium. Progress report, 10:40216 (R;US)
GALLIUM ALLOYS
Optical Properties
Augmented space formulation of the optical conductivity of random semiconducting alloys, 10:39507 (R;XA)
GALLIUM ARSENIDES
Dislocations
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Electrical Properties
Materials-process interactions in ternary alloy semiconductors. Final report, 1 May 1982-31 October 1983, 10:39600 (R;US)
Line Defects
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Molecular Beam Epitaxy
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Optical Microscopy
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Optical Properties
Materials-process interactions in ternary alloy semiconductors. Final report, 1 May 1982-31 October 1983, 10:39600 (R;US)
Photoluminescence
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Superlattices
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
GALLIUM PHOSPHIDES
Dislocations
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Energy Absorption
Pulse propagation in an absorbing film, 10:39635 (J;US)

Line Defects
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Optical Microscopy
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Photoluminescence
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Wave Propagation
Pulse propagation in an absorbing film, 10:39635 (J;US)

GAMMA DETECTION
Li-Drifted Ge Detectors
Peak efficiency of coaxial Ge(Li) detector for large-volume samples, 10:39966 (RA;CS;In Slovak)
Shower Counters
Scintillator-lead photon calorimeter using optical fiber readout systems, 10:40044 (R;DE)

GAMMA DOSIMETRY
Chemical Dosemeters
Environmental effects on the ethanol-monochlorobenzene dosimeter system before, during and after irradiation, 10:39899 (RA;XA)
Colorimetric Dosemeters
Intercalibration and testing of blue cellophane- and cellulosetriacetate films for the megarad dose range, 10:39898 (RA;XA)
Radiochromic dye dosimetry using triphenylmethane leucocyanides in nylon or polyvinyl butyral, 10:39903 (RA;XA)
Light Emitting Diodes
Use of luminescence diodes as integral dosemeters, 10:39927 (RA;CS;In Czech)

GAMMA RADIATION
Energy Losses
Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead, 10:40873 (R;JP)
Neutron Transport Theory
Negative flux occurrence in gamma radiation transport problems, 10:39183 (RA;BR;In Portuguese)
Radiation Doses
Comparison of calculations and measurements of the off-axis radiation dose (Si) in liquid nitrogen as a function of radiation length. Master's thesis, 10:40862 (R;US)

GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS

GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Data Acquisition Systems
LEGS data acquisition facility, 10:39833 (R;US)

GAMMA SPECTROMETERS
See also MOESSBAUER SPECTROMETERS
Laboratory scintillation gamma spectrometer, 10:39962 (RA;CS;In Czech)
Calibration
Energy calibration of a crystal diffraction gamma spectrometer, 10:39973 (RA;SU;In Russian)
Theoretical calibration of aerial spectrometer for accident dosimetry of nuclear power plant vicinity, 10:39936 (RA;CS;In Czech)
Computer Codes
Programming for a CAMAC gamma-spectrometer, 10:40016 (RA;SU)
Cosmic Ray Detection
Spectrometric NaI(Tl) detector for cosmophysical investigations, 10:39892 (R;SU;In Russian)
Energy Resolution
Energy resolution of a single crystal scintillation spectrometer with several photomultipliers, 10:39979 (RA;SU;In Russian)
IAEA Safeguards
Requirements for gamma spectroscopic equipment for IAEA safeguards, 10:40010 (RA;SU)
Li-Drifted Ge Detectors
2γ and 3γ annihilation decay spectrometer, 10:39977 (RA;SU;In Russian)
Spectrometer for investigation of perturbed gamma-gamma angular correlations with three Ge(Li) detectors and two analog-to-digital converters on-line with SM-3 computers, 10:39988 (R;SU;In Russian)
NaI Detectors
Spectrometric NaI(Tl) detector for cosmophysical investigations, 10:39892 (R;SU;In Russian)
Perturbed Angular Correlation
Spectrometer for investigation of perturbed gamma-gamma angular correlations with three Ge(Li) detectors and two analog-to-digital converters on-line with SM-3 computers, 10:39988 (R;SU;In Russian)
Scintillation Counters
2γ and 3γ annihilation decay spectrometer, 10:39977 (RA;SU;In Russian)
Time Resolution
Spectrometer for positron lifetime measurement. Lifetimes of positrons in LiF and BaF, 10:39983 (RA;SU;In Russian)

GAMMA SPECTROSCOPY
Betatrons
Contribution to spectrometry of betatron bremsstrahlung, 10:39839 (RA;CS;In Slovak)
Data Processing
Definition of quality criterions for the test of softwares used in gamma spectrometry: identification and dosage of radionuclides in a complex mixture, 10:39646 (R;FR;In French)
FGM - a flexible gamma-spectrum analysis program for a small computer, 10:41085 (R;HU)
F Codes
FGM - a flexible gamma-spectrum analysis program for a small computer, 10:41085 (R;HU)
In-Beam Spectroscopy
In-beam gamma spectroscopy at the U-240 cyclotron, 10:39981 (RA;SU;In Russian)
Li-Drifted Ge Detectors
Gamma spectrometry determination of radionuclides in water samples from the environs of nuclear power plants, 10:40195 (RA;CS;In Slovak)
Semiconductor Detectors
Activity determination of natural radionuclides in large-volume samples by semiconductor gamma spectrometry, 10:39933 (RA;CS;In Czech)

GAMMA-RAY LASERS
See GASERS

GARIGLIANO REACTOR
Sessa Aurunea, Caserta, Italy
Reactor Dismantling
Quantitative determination of impurities contained in the pressure vessel of the Garigliano reactor, 10:39302 (R;XE;In Italian)

GAS CENTRIFUGES
Fluid Mechanics
Rotating compressible flows with internal sources and sinks, 10:38836 (J;GB)

GAS COOLANTS
See GASES

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FLOW
Boundary-Value Problems
Efficient solution algorithms for the Riemann problem for real gases, 10:40494 (J;US)
Convection
Gas flow in vertical slots with large horizontal temperature differences, 10:40490 (J;US)

GAS FURNACES
Draft Control Systems
Energy saver draft hood. Final report, 10:39438 (R;US)

GAS LASERS
See also EXCIMER LASERS
Construction
Construction techniques of a molecular hydrogen laser. Interim technical report, 10:39742 (R;US)

GAS TURBINE POWER PLANTS
Feasibility Studies
Coal-Burning Gas Turbine Program of the Locomotive Development Committee, Bituminous Coal Research, Inc., 10:39469 (RA;US)
Gas Turbines
Application of advanced slagging combustor to coal-fired gas turbines, 10:39073 (RA;US)
Combustion turbine systems modification for direct coal firing, 10:39076 (RA;US)
Corrosion of gas turbine components by coal combustion products, 10:39072 (RA;US)
Corrosion and erosion processes relevant to coal-fired gas turbines, 10:39081 (RA;US)
Effect of hot section surface temperature on corrosion and heavy fuel ash deposits, 10:39079 (RA;US)
Erosion, corrosion, and deposition in coal-fired gas turbines: the experience derived during the past decade, 10:39071 (RA;US)
Erosion considerations for direct coal-fired combustion turbines, 10:39078 (RA;US)
Evaluations of utility turbine performance with expansion gases derived from ash bearing fuels, 10:39074 (RA;US)
General Electric Company's participation in the Bureau of Mines Direct Coal-Firing Program (1958-1963), 10:39069 (RA;US)
Hot gas cleaning technology for direct coal-fired cycles -- issues and tradeoffs, 10:39077 (RA;US)
Open-cycle coal-burning turbine in Australia (1948 - 1970), 10:39070 (RA;US)
Overall system considerations, 10:39075 (RA;US)
Recent research on the laws governing vapor and particle deposition from combustion gases - implications for diminishing deposition in the direct firing of (beneficiated) coal in combustion turbines, 10:39080 (RA;US)
GAS TURBINES
Combustors
Application of advanced slagging combustor to coal-fired gas turbines, 10:39073 (RA;US)
Combustion turbine systems modification for direct coal firing, 10:39076 (RA;US)
Commercialization
Evaluation, 10:39068 (RA;US)
Corrosion
Corrosion of gas turbine components by coal combustion products, 10:39072 (RA;US)
Corrosion and erosion processes relevant to coal-fired gas turbines, 10:39081 (RA;US)
Effect of hot section surface temperature on corrosion and heavy fuel ash deposits, 10:39079 (RA;US)
Erosion, corrosion, and deposition in coal-fired gas turbines: the experience derived during the past decade, 10:39071 (RA;US)
Deposits
Erosion, corrosion, and deposition in coal-fired gas turbines: the experience derived during the past decade, 10:39071 (RA;US)
Recent research on the laws governing vapor and particle deposition from combustion gases - implications for diminishing deposition in the direct firing of (beneficiated) coal in combustion turbines, 10:39080 (RA;US)
Erosion
Corrosion and erosion processes relevant to coal-fired gas turbines, 10:39081 (RA;US)
Erosion, corrosion, and deposition in coal-fired gas turbines: the experience derived during the past decade, 10:39071 (RA;US)
Erosion considerations for direct coal-fired combustion turbines, 10:39078 (RA;US)
Open-cycle coal-burning turbine in Australia (1948 - 1970), 10:39070 (RA;US)
Exhaust Gases
Hot gas cleaning technology for direct coal-fired cycles -- issues and tradeoffs, 10:39077 (RA;US)
Feasibility Studies
Evaluation, 10:39068 (RA;US)
Initial evaluation of a coal burning turbine powered vehicle system, 10:39470 (RA;US)
Fuel Slurries
Experimental coal-water slurry fired combustor, 10:39471 (RA;US)
Modifications
Erosion considerations for direct coal-fired combustion turbines, 10:39078 (RA;US)
Overall system considerations, 10:39075 (RA;US)
Performance
Evaluations of utility turbine performance with expansion gases derived from ash bearing fuels, 10:39074 (RA;US)
Open-cycle coal-burning turbine in Australia (1948 - 1970), 10:39070 (RA;US)
Performance Testing
Initial evaluation of a coal burning turbine powered vehicle system, 10:39470 (RA;US)
Turbine Blades
General Electric Company's participation in the Bureau of Mines Direct Coal-Firing Program (1958-1963), 10:39069 (RA;US)
GAS WELLS

GENERATORS (STEAM)
See STEAM GENERATORS

GEOCHEMISTRY
Meetings
Current research: Part B, 10:40389 (R;CA)
Research Programs
Current research: Part B, 10:40389 (R;CA)

GEOLOGIC DEPOSITS
See also ALLUVIAL DEPOSITS
COAL DEPOSITS
NATURAL GAS DEPOSITS
OIL SAND DEPOSITS
PETROLEUM DEPOSITS
SALT DEPOSITS
URANIUM DEPOSITS
Radiometric Surveys
Preliminary studies on gamma ray spectral logging for gold, 10:40326 (RA;CA)

GEOLOGIC FAULTS
Deformation
Can water-injection tests reveal the potential for fault movements?, 10:40383 (RA;US)

GEOLOGIC FORMATIONS
Isotope Dating
Geology and U-Pb geochronology of parts of the Leith Peninsula and Riviere Grandin map areas, District of Mackenzie, 10:40327 (RA;CA)

GEOLOGIC FRACTURES
See also GEOLOGIC FAULTS
Fluid Flow
Connectivity, flow and transport in network models of fractured media, 10:38871 (R;GB)
Three-dimensional model for fluid flow in nonextensive fractures, 10:40347 (RA;US)
Radionuclide Migration
Radionuclide transport in a single fissure. A laboratory study of Am, Np, and Tc, 10:38933 (R;SE)

GEOLOGIC STRATA
Fluid Flow
TOUGH: a numerical model for strongly heat driven flow in partially saturated media, 10:38904 (RA;US)
Geochemistry
Geochemistry research planning for underground repositories, 10:38910 (RA;US)
Heat Transfer
TOUGH: a numerical model for strongly heat driven flow in partially saturated media, 10:38904 (RA;US)
Radionuclide Migration
Analytical performance models for geologic repositories containing radioactive waste, 10:38912 (RA;US)
Thermodynamic coupling of transport processes in near-field regions of nuclear waste repositories, 10:38948 (RA;US)

GEOPHYSICAL SURVEYS
Meetings
Proceedings of a technical session on rock mechanics "Advance in laboratory sample testing", 10:38882 (R;XE)

GEORGIA
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL FIELDS
See also HEBER GEOTHERMAL FIELD
KRAFLA GEOTHERMAL FIELD
Exploitation
Geologic and hydrologic research on the Moana geothermal system - Washoe County, Nevada, 10:39033 (BA;US)

GEOTHERMAL FLUIDS
Salinity
Geothermal injection monitoring with d.c. resistivity methods, 10:39042 (BA;US)

GEOTHERMAL HEATING SYSTEMS
Cost Benefit Analysis
The economic result of geothermal heat for two large greenhouses, 10:39057 (BA;US)
Financial Incentives
The economic result of geothermal heat for two large greenhouses, 10:39057 (BA;US)
Operation
Description and operation of Haakon school geothermal heating system, 10:39058 (BA;US)
Performance
Description and operation of Haakon school geothermal heating system, 10:39058 (BA;US)

GEOTHERMAL POWER PLANTS
Air Pollution Control
The direct chlorination process for Hydrogen Sulfide Abatement, 10:39046 (BA;US)
Gaseous Wastes
The direct chlorination process for Hydrogen Sulfide Abatement, 10:39046 (BA;US)

GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS

GEOTHERMAL RESOURCES
Energy Source Development
Towards solving the conflict between geothermal resource uses, 10:39043 (BA;US)
Land Use
Towards solving the conflict between geothermal resource uses, 10:39043 (BA;US)
Resource Development
Towards solving the conflict between geothermal resource uses, 10:39043 (BA;US)
Uses
Towards solving the conflict between geothermal resource uses, 10:39043 (BA;US)

GEOTHERMAL SPRINGS
See THERMAL SPRINGS

GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS
HYDROTHERMAL SYSTEMS
Geology
Structural control of the Baltazor Hot Springs geothermal system, Humboldt County, Nevada, 10:39035 (BA;US)
Structural control and alteration at Beowawe KGRA, Nevada, 10:39038 (BA;US)
Geothermometry
Structural control and alteration at Beowawe KGRA, Nevada, 10:39038 (BA;US)
Resource Potential
Structural control of the Baltazor Hot Springs geothermal system, Humboldt County, Nevada, 10:39035 (BA;US)
Thermal Conductivity
Values for conductive heat transfer in geothermal technologies, 10:39061 (BA;US)
Thermal Diffusion
Values for conductive heat transfer in geothermal technologies, 10:39061 (BA;US)

GEOTHERMAL WELLS
Capitalized Cost
An evaluation of direct use project drilling costs, 10:39044 (BA;US)
Drawdown
Drawdown pressure transient analysis of a well near a steam cap, 10:39053 (BA;US)
Environmental Impacts
Evaluation of NEPA-based environmental commitments at four geopressured geothermal design wells, 10:39045 (BA;US)
Lost Circulation
Lost circulation in geothermal wells: Research and Development status, 10:39051 (BA;US)
Operating Cost
An evaluation of direct use project drilling costs, 10:39044 (BA;US)
Performance
A summary of modeling studies of the Krafla geothermal field, Iceland, 10:39039 (BA;US)
Pressure Control
Injection testing in 1982 at the Svartsengi high-temperature field in Iceland, 10:39052 (BA;US)
Pressure Measurement
Drawdown pressure transient analysis of a well near a steam cap, 10:39053 (BA;US)
Production
Injection testing in 1982 at the Svartsengi high-temperature field in Iceland, 10:39052 (BA;US)
Test Facilities
A full-scale facility for evaluation of lost circulation materials and techniques, 10:39050 (BA;US)
Water Chemistry
Utah: basic data for thermal springs and wells as recorded in GEOTHERM, 10:39032 (R;US)
Well Drilling
Evaluation of NEPA-based environmental commitments at four geopressured geothermal design wells, 10:39045 (BA;US)
Well Logging
A summary of well testing activities at Lawrence Berkeley Laboratory, 1975-1982, 10:39040 (BA;US)
Drawdown pressure transient analysis of a well near a steam cap, 10:39053 (BA;US)
GERMAN DEMOCRATIC REPUBLIC
Personnel Dosimetry
Occupational radiation exposure in the GDR in 1981, 10:40914 (R;DD;In German)
Personnel Monitoring
Occupational radiation exposure in the GDR in 1981, 10:40914 (R;DD;In German)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMANATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Diffusion
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
Ionic Conductivity
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
GERMANIUM
Binding Energy
Arsenic-terminated Ge(111): An ideal 1 x 1 surface, 10:39633 (J;US)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Crystallization
Crystallography and defects in explosively crystallized amorphous germanium, 10:39519 (RA;CA)
Sequential crystal lattice images of grain growth in amorphous germanium, 10:39513 (RA;CA)
Grain Growth
Sequential crystal lattice images of grain growth in amorphous germanium, 10:39513 (RA;CA)
Ion-Atom Collisions
Collision cascades in silicon and germanium, 10:40448 (RA;CA)
Physical Radiation Effects
Collision cascades in silicon and germanium, 10:40448 (RA;CA)
Surface Properties
Arsenic-terminated Ge(111): An ideal 1 x 1 surface, 10:39633 (J;US)
GERMANIUM 76
Beta-Minus Decay
Ultralow-background study of neutrinoless double β decay of ^{76}Ge; new limit on the Majorana mass of ν/sub e/, 10:40722 (J;US)
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
GERMANIUM ALLOYS
Physical Radiation Effects
Irradiation defects in the A-15 compounds V_3Si and Nb_3Ge: effects on superconducting and transport properties, 10:39486 (R;FR;In French)
GERMANIUM OXIDES
Diffusion
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
Ionic Conductivity
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
GERMANY (DEMOCRATIC REPUBLIC)
See GERMAN DEMOCRATIC REPUBLIC
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GIANT RESONANCE
Random Phase Approximation
Introduction to the microscopic theory of giant resonances, 10:40462 (R;NO)
Shell Models
Dissipative diabatic dynamics: a shell-model approach to large-amplitude collective nuclear motion, 10:40842 (RA;SU)
Tamm-Dancoff Method
Introduction to the microscopic theory of giant resonances, 10:40462 (R;NO)
GIANT RESONANCE MODEL
Computer Codes
CADE - A computer programme for the calculation of nuclear cross-sections from the Weisskopf-Ewing theory, 10:40794 (R;GB)
GKN REACTOR (DODEWAARD)
See DODEWAARD REACTOR
GLASS
See also BOROSILICATE GLASS
Auger Electron Spectroscopy
Auger electron microanalysis of sphene-based glass ceramic, 10:39611 (RA;CA)
Crystal Structure
Structure of phosphorus-selenium glasses. I. Concentration dependence of the short- and intermediate-range order, 10:39641 (J;NL)
Crystallization
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Electro-Optical Effects
Crystal class and the electrooptic effect, 10:40920 (R;US)
Raman Spectra
Structure of phosphorus-selenium glasses. I. Concentration dependence of the short- and intermediate-range order, 10:39641 (J;NL)
Seals
In-situ vacuum-assisted molding of glass-metal electrical components, 10:39475 (R;US)
Injection molding-sealing of glass to low melting metals, 10:39476 (R;US)
Vapor Deposited Coatings
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)

GLASS MELTERS
See CERAMIC MELTERS
GLASSY METALS
See METALLIC GLASSES
GLUEBALLS
Hadronic Particle Decay
Exclusive production and decay of glueballs, 10:40518 (R;SU;In Russian)
Lattice Field Theory
More about the SU(2) 2^+ glueball state, 10:40611 (R;DE)
Particle Production
Cross section growth of hadron-hadron interactions and its possible connection with glueball existence, 10:40571 (R;SU;In Russian)
Exclusive production and decay of glueballs, 10:40518 (R;SU;In Russian)
Hadronic production of glueballs, 10:40606 (BA;GB)
Quantum Chromodynamics
Hadronic production of glueballs, 10:40606 (BA;GB)
GLUONIUM
See GLUEBALLS
GLYCOSYL HYDROLASES
Code number 3.2.
Enzyme Activity
β-xylosidase of Thermomonospora, 10:40232 (J;US)
Kinetics of cellobiose hydrolysis using cellobiase composites from Trichoderma reesei and Aspergillus niger, 10:38986 (J;US)
GLYOXAL
Electronic Structure
Molecular structures and energetics for the lowest triplet states of glyoxal, 10:40471 (J;US)
Molecular Structure
Molecular structures and energetics for the lowest triplet states of glyoxal, 10:40471 (J;US)
GOBAR GAS
See METHANE
GOLD
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Diffusion
Study of diffusion mechanisms of helium atoms in face-centered cubic metals after α - implantation in a cyclotron, 10:39610 (RA;BR)
Neutron Reactions
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Prospecting
Preliminary studies on gamma ray spectral logging for gold, 10:40326 (RA;CA)
Rutherford Scattering
Graphical analysis for Rutherford backscattering spectra, 10:40463 (R;BR)
GOLD 197 TARGET
Krypton 84 Reactions
Investigation of the Kr+Au system at 35 MeV/u: evidence for highly energy relaxed products, 10:40768 (RA;FR)
Krypton 86 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Neon 20 Reactions
Fast light ejectiles as a probe of reaction mechanism. The important effect of decomposition into different sources, 10:40766 (RA;FR)
Neon 22 Reactions
Investigation of the pre-actinide nucleus fission, 10:40853 (RA;SU;In Russian)
Oxygen 16 Reactions
Gasdynamic model of intermediate energy heavy ion collisions and high-energy particle emission, 10:40847 (RA;SU;In Russian)
Xenon 132 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
GOLD ISOTOPES
Proton Reactions
Complete statistical treatment of heavy target fragmentation in high energy proton nucleus collisions, 10:40808 (RA;FR)
Uranium 238 Reactions
Emission of light and energetic medium masses in multiparticle exit channels in the reactions ^{238}U+sup(nat)U and ^{238}U+Au at 16.7 MeV/N energy, 10:40776 (RA;FR)
GOLDHABER-TELLER MODEL
See GIANT RESONANCE MODEL
GONIOMETERS
Design
General concepts of the NG-3 goniometer design and coupled electronic control system, 10:40015 (RA;SU;In Russian)
GRADED BAND GAP SOLAR CELLS
See CASCADE SOLAR CELLS
GRAIN ALCOHOL
See ETHANOL
GRAND UNIFIED THEORY
Electron Neutrinos
Dirac neutrinos in GUTs, 10:40563 (R;US)
Intermediate Vector Bosons
Have color octet vector bosons been found, 10:40612 (R;DE)
GRANITES
See also PEGMATITES
Fission Spectra
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Fission Tracks
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Fracture Mechanics
Study of deep fracturation of granitic rock mass. Documentary study, 10:38891 (R;XE;In French)
Geochemistry
Uranium and thorium distribution patterns and lithogeochemistry of Devonian granites in the Chedabucto Bay area, Nova Scotia, 10:38820 (RA;CA)
Hydraulic Conductivity
Buffer mass test - Site documentation, 10:38951 (R;SE)
Isotope Dating
Summary of Rb-Sr isotope studies in the Archean Hopedale Block and the adjacent proterozoic Makkovik subprovince, Labrador. Report 5, 10:40329 (RA;CA)
Multi-Element Analysis
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Porosity
Nonlinear elastic characteristics of granite rock samples from Lac du Bonnet batholith, 10:40381 (RA;CA)
Radioactive Waste Disposal
Study of deep fracturation of granitic rock mass. Documentary study, 10:38891 (R;XE;In French)
Thermomechanical response of salt and hard rocks to thermal loading by wastes over 10 years old, 10:38906 (RA;US)
Radionuclide Migration
Radionuclide transport in a single fissure. A laboratory study of Am, Np, and Tc, 10:38933 (R;SE)
Rock Mechanics
Nonlinear elastic characteristics of granite rock samples from Lac du Bonnet batholith, 10:40381 (RA;CA)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Flow Models
Granular Flow Project quarterly report, April-June 1985, 10:38755 (R;US)

Shear
Granular Flow Project quarterly report, April-June 1985, 10:38755 (R;US)
GRAPHITE
Vapor Deposited Coatings
Deposition and characterization of p-type cadmium telluride films, 10:39629 (J;US)
GRAPHITE MODERATOR
See GRAPHITE
GRASERS
See GASERS
GRASSLANDS
See RANGELANDS
GRAVITATIONAL WAVE DETECTORS
Laser-interferometric detector of gravitational radiation, 10:40408 (RA;SU;In Russian)
GRAVITONS
Role of gravitation in the existence of an electric charge and its magnetic moment. Dynamics, 10:40938 (R;SU;In Russian)
GRAY

GREENHOUSES
Geothermal Heating
Geothermal soil heating in Iceland, 10:39059 (BA;US)
Geothermal Heating Systems
The economic result of geothermal heat for two large greenhouses, 10:39057 (BA;US)
Waste Heat Utilization
[Demonstration of refrigeration: waste heat recovery in floriculture.] Final report, 10:39461 (R;US)
GROUND MOTION
Specifications
Guidelines for ground motion definition for the eastern United States, 10:39363 (R;US)
GROUND WATER
Age Estimation
Dating technique tested, 10:40396 (J;US)
Bacteria
Distribution and occurrence of total coliform bacteria in Floridan aquifer wells, western Lake County, Florida, 10:40363 (R;US)
Contamination
Chemical mixing model describing groundwater contamination from an inactive uranium mill tailings pile, 10:38947 (RA;US)
Isotope Ratio
Isotopic study of Karst water. Final report for the period 1 April 1981-31 May 1984, 10:40332 (R;XA)
Natural Radioactivity
Radon-222 in groundwater of the Long Valley caldera, California, 10:40196 (RA;US)
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)
Radionuclide Migration
DYNAMIX: a computer program for multiple-species chemical transport with precipitation and dissolution, 10:38945 (RA;US)
Preliminary assessment of radionuclide vapor phase transport in unsaturated tuff, 10:38950 (R;US)
Resource Assessment
Planning report for the comprehensive appraisal of the groundwater resources of the North Coast Limestone Area of Puerto Rico, 10:40352 (R;US)
Water Pollution
Use of mathematical models for subsurface contaminant transport assessment, 10:40188 (RA;US)
Water Quality
Quality of water, Quillayute River basin, Washington, 10:40191 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROUP THEORY
For mathematical groups only; for neutron-energy groups use MULTIGROUP THEORY.
Representations of the group of diffeomorphisms in the physics of particles, gravity and fluids, 10:40952 (R;US)
GUANIDINES
Labelling
^{131}I-3-iodobenzylguanidine (^{131}I-3-IBG) as a scintigraphic agent for the visualization of adrenal medulla tumors, 10:39702 (R;NO)
GULF OF MEXICO
Fishes
Species profiles: life histories and environmental requirements of coastal fishes and invertebrates (Gulf of Mexico) - southern flounder (Paralichtys lethostigma), 10:40180 (R;US)

H

HADRON REACTIONS
N-D Method
New formulation of the N-D equations with account for inelastic channels contribution, 10:40828 (RA;SU;In Russian)
Pair Production
Production of meson pairs with large transverse momenta in hadron-nuclear interactions, 10:40591 (R;SU;In Russian)
Parton Model
Parton dynamics in hadronic processes. Technical progress report, 10:40567 (R;US)
HADRON-HADRON INTERACTIONS
Inclusive Interactions
Hard hadronic collisions - extrapolation of standard effects, 10:40554 (RA;XC)
Multiple Production
Analysis of experimental semi-inclusive distributions at the SPS collider energies, 10:40594 (R;SU;In Russian)
Hard hadronic collisions - extrapolation of standard effects, 10:40554 (RA;XC)
Particle Production
Heavy vector bosons and super colliders, 10:40556 (RA;XC)
Why is this energy range so interesting, 10:40551 (RA;XC)
TeV Range 10-100
Soft physics with a supercollider, 10:40555 (RA;XC)
Why is this energy range so interesting, 10:40551 (RA;XC)
HADRONIC PARTICLE DECAY
Particle decay due to hadronic interaction.
Glueballs
Hadronic production of glueballs, 10:40606 (BA;GB)
HADRONS
See also BARYONS
MESONS
Harmonic Oscillator Models
Quantum relativistic oscillator II. Non-relativistic limit and phenomenological justification, 10:40562 (R;US)
Multiple Production
Properties of multiplicity distributions in nuA and antinuA interactions at Esub((anti nu)) <= 30 GeV, 10:40520 (R;SU)
HAFNIUM 174
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
HAIR
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)

Energy Efficiency
High-temperature heat pumps for industry, 10:39463 (R;GB)
Introduction to heat pumps, 10:39449 (R;GB)
Specifications
Development of a thermal heat pump to heat buildings and to utilize waste heat, 10:39459 (R;DE;In German)
Working Fluids
Development of a thermal heat pump to heat buildings and to utilize waste heat, 10:39459 (R;DE;In German)

HEAT RESISTING ALLOYS
See also STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-316
STAINLESS STEEL-347
STAINLESS STEEL-Z6CND17-12
Effect of reduction of strategic Columbium addition in 718 Alloy on the structure and properties. Final report, 10:39552 (R;US)
Corrosion Protection
Study of the corrosion of superalloys protected by coatings: role of impurities and stresses). Final report, 1 October 1984-1 October 1985 (IN100 and CMSX2), 10:39554 (R;FR;FR)
Creep
First demonstration report on the high temperature materials data Bank of JRC, 10:39502 (R;XE)
Information Systems
First demonstration report on the high temperature materials data Bank of JRC, 10:39502 (R;XE)
Materials division facilities and equipment (Petten Establishment, high temperature materials), 10:39503 (R;XE)
Tensile Properties
First demonstration report on the high temperature materials data Bank of JRC, 10:39502 (R;XE)

HEAT SOURCES (RADIOISOTOPE)
See RADIOISOTOPE HEAT SOURCES

HEAT STORAGE DEVICES
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT STORAGE SYSTEMS
See THERMAL ENERGY STORAGE EQUIPMENT

HEAT TRANSFER
Computer Calculations
Comparison of the results from ABRE-3 computer code with other models and with experimental results, 10:39755 (RA;BR;In Portuguese)
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)
Computer Codes
Data analyses for Nevada Test Site (NTS) premixed combustion tests, 10:39357 (R;US)
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)
Computerized Simulation
Thermal behavior simulation of a nuclear fuel rod through an electrically heated rod, 10:39192 (R;BR;In Portuguese)
Simulation
Analytical modeling techniques for efficient heat transfer simulation in nuclear power plant transients, 10:39241 (R;US)

HEAT TRANSMISSION
See HEAT TRANSFER

HEATERS
Fouling
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)

HEATING
See also DISTRICT HEATING
SPACE HEATING
Energy Demand
Estimation of the net energy needs for building heating, 10:39448 (R;BE;FR)

HEAVY FUELS
See RESIDUAL FUELS

HEAVY ION ACCELERATORS
Includes combined accelerator types for heavy ion acceleration.
See also HHIRF ACCELERATOR
JINR U-400 CYCLOTRON
NAC CYCLOTRON
Beam Dynamics
Synthesis of MBE-4 accelerating waveforms, 10:39819 (R;US)
Colliding Beams
Design for a high field combined function superferric magnet, 10:39788 (R;US)
Review of heavy ion collider proposals, 10:39787 (R;US)
Ion Sources
Potentialities of a plasma produced by CO_2-laser being a multicharged ion source, 10:39840 (R;SU;In Russian)
Magnet Pole Pieces
Design for a high field combined function superferric magnet, 10:39788 (R;US)
Modifications
Postacceleration system of the tandem accelerator of the Institute for Physics and Nuclear Engineering, 10:39848 (RA;SU;In Russian)
Performance
Postacceleration system of the tandem accelerator of the Institute for Physics and Nuclear Engineering, 10:39848 (RA;SU;In Russian)
Uses
Nuclear track research at GSI Darmstadt, 10:39797 (RA;SU)

HEAVY ION FUSION REACTIONS
Effect of angular momentum on fission product distribution in heavy ion reactions, 10:40838 (RA;SU;In Russian)
Recent findings on the road to the limits of fusion, 10:40788 (RA;SU)
Excitation Functions
New phenomenological approach in treating fusion excitation functions, 10:40800 (RA;FR)
Fast Fission
Fast fission phenomena, 10:40851 (RA;SU)
Nuclear Potential
Dynamical fusion barriers, 10:40801 (RA;FR)
Quasi-Fission
Fast fission phenomena, 10:40851 (RA;SU)

SULFUR 32 REACTIONS
URANIUM 238 REACTIONS
ZIRCONIUM 90 REACTIONS
Initial stage of heavy ion interaction and mechanism of kinetic energy dissipation, 10:40835 (RA;SU;In Russian)
Mean field approach to pion production in intermediate energy heavy ion collisions, 10:40699 (RA;FR)

Respectives of heavy ion physics in JINR, 10:40787 (RA;SU;In Russian)
Charge Plunger Method
Charge plunger method on heavy ion beams, 10:40666 (RA;SU;In Russian)
Charge-Exchange Reactions
Spin effects in the charge-exchange reactions with relativistic ions, 10:40832 (RA;SU;In Russian)
Coherent Tube Model
Gasdynamic model of intermediate energy heavy ion collisions and high-energy particle emission, 10:40847 (RA;SU;In Russian)
Collective Model
New classical model for heavy ion reactions, 10:40806 (RA;FR)
Nuclear-nucleus collisions: intrinsic motion with external correlations, 10:40844 (RA;SU)
Coulomb Excitation
Population of magnetic substates in coulomb excitation of nuclei by heavy ions, 10:40826 (RA;SU;In Russian)
Deep Inelastic Scattering
Nonlinear effects in heavy ion scattering by nuclei, 10:40834 (RA;SU;In Russian)
Direct Reactions
Analysis of direct nuclear reactions with heavy ions in the framework of classical trajectory approximation, 10:40833 (RA;SU;In Russian)
Elastic Scattering
Elastic scattering of compound nuclei, 10:40831 (RA;SU;In Russian)
Fission
Analysis of a fissility of nuclei by light and heavy ions, 10:40852 (RA;SU;In Russian)
Effect of angular momentum on fission product distribution in heavy ion reactions, 10:40838 (RA;SU;In Russian)
Heavy-ion induced fission reactions, 10:40763 (RA;SU)
Heavy Ion Fusion Reactions
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Dynamical fusion barriers, 10:40801 (RA;FR)
Recent findings on the road to the limits of fusion, 10:40788 (RA;SU)
Inelastic Scattering
Pauli repulsion in heavy ion inelastic scattering, 10:40829 (RA;SU;In Russian)
Liquid Drop Model
New classical model for heavy ion reactions, 10:40806 (RA;FR)
Meetings
Theoretical approaches to heavy ion reaction mechanisms. Proceedings, 10:40645 (R;FR)
Multi-Nucleon Transfer Reactions
Angular distributions and mechanism of some-nucleon transfer reactions induced by heavy ions in near-barrier range, 10:40836 (RA;SU;In Russian)
Escape of light charged particles and interaction of heavy ions with nuclei, 10:40845 (RA;SU;In Russian)
Kinematic consideration of reactions of tangential interaction as a method of an analysis of experimental data, 10:40846 (RA;SU;In Russian)
Nuclear Reaction Kinetics
Kinematic consideration of reactions of tangential interaction as a method of an analysis of experimental data, 10:40846 (RA;SU;In Russian)
One-Dimensional Calculations
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)
Quark Matter
Dilepton production from quark gluon plasma using non-equilibrium thermodynamics, 10:40549 (RA;FR)
Quasi-Fission
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Research Programs
Experimental program at GANIL, 10:40650 (RA;SU)
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Spallation
Multifragmentation of heavy nuclei, 10:40848 (RA;SU;In Russian)
Transfer Reactions
Transfer and excitations in grazing heavy ion reactions, 10:40797 (RA;FR)

HEAVY ION SPECTROMETERS
Design
Experimental study on the fission characteristics of weakly excited heavy nuclei in heavy ion reactions, 10:40005 (RA;SU;In Russian)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Ion-Atom Collisions
Investigations in atomic physics by heavy ion projectiles, 10:40454 (RA;SU)

HEAVY LIQUID BUBBLE CHAMBERS
Readout Systems
Holographic bubble chamber in a proton beam, 10:40037 (R;SU;In Russian)

HEAVY NUCLEI
For nuclei from mass 181 upwards.

Beta Decay
Beta decay far from stability and its role in nuclear physics and astrophysics, 10:40849 (RA;SU)
Deuteron Reactions
Polarizability and deuteron disintegration in elastic scattering in electric field of heavy nuclei, 10:40771 (RA;SU;In Russian)
Fission
Investigation of the pre-actinide nucleus fission, 10:40853 (RA;SU;In Russian)
Some peculiarities of fission fragment mass distributions of preactinide nuclei, 10:40772 (RA;SU;In Russian)
Fission Barrier
Fission barrier structure of nuclei in a region of thorium, 10:40784 (RA;SU;In Russian)
Giant Resonance
Interacting boson model in a SU(3) basis, 10:40819 (RA;SU;In Russian)
Heavy Ion Reactions
Analysis of a fissility of nuclei by light and heavy ions, 10:40852 (RA;SU;In Russian)
Neutron Reactions
Dipole photon strength functions of compound-compound γ-transitions and γ-spectra of neutron radiative capture, 10:40737 (RA;SU;In Russian)

HEAVY OILS
See PETROLEUM

HEBER GEOTHERMAL FIELD
Computerized Simulation
A modeling study of the natural state of the Heber geothermal field, California, 10:39034 (BA;US)
Geologic Models
A modeling study of the natural state of the Heber geothermal field, California, 10:39034 (BA;US)

HELICOPTERS
Detection
New passive helicopter detector, 10:38971 (R;US)
HELIUM
Atom-Atom Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Coulomb Field
Electron-repulsion integral and the helium atom: the integral transform approach, 10:40440 (R;BR)
Diffusion
Study of diffusion mechanisms of helium atoms in face-centered cubic metals after α - implantation in a cyclotron, 10:39610 (RA;BR)
Ecological Concentration
Landfill gas project: helium soil-gas investigations. Final technical report, 10:40157 (R;US)
Ion-Atom Collisions
Cusp studies for simple collision systems, 10:40447 (R;HU)
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Ion-Molecule Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Spatial Distribution
Landfill gas project: helium soil-gas investigations. Final technical report, 10:40157 (R;US)
Superfluidity
Cryostat for neutron studies of superfluid helium under a pressure up to 25 atm, 10:39719 (R;SU;In Russian)
HELIUM 10
High-energy particle emission and search for the ^{10}He nuclei in heavy ion reactions, 10:40695 (RA;SU;In Russian)
HELIUM 3
Form Factors
Impulse approximation in solid helium, 10:39638 (J;US)
Muonic Atoms
Measurement of the hyperfine structure of the ground state of muonic helium(3), 10:40445 (R;DE;In German)
Sound Waves
Coupling of Rayleigh-like waves with zero-sound modes in normal ^{3}He, 10:40492 (J;US)
Zero Sound
Coupling of Rayleigh-like waves with zero-sound modes in normal ^{3}He, 10:40492 (J;US)
HELIUM 3 REACTIONS
Breakup Reactions
Calculation of the $^{3}He+d \rightarrow {}^{3}He+p+n$ reaction in the range of neutron resonance interaction with ^{3}He, 10:40672 (RA;SU;In Russian)
Knock-Out Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
HELIUM 4
See also HELIUM II
Form Factors
Impulse approximation in solid helium, 10:39638 (J;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Antiproton Reactions
Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions, 10:40596 (R;SU;In Russian)
HELIUM 6
Energy Levels
Excitation of respiratory resonances in scattering of s-shell nuclei on alpha particle, 10:40680 (RA;SU;In Russian)
Photonuclear Reactions
Photodisintegration of p-shell light nuclei, 10:40683 (RA;SU;In Russian)
HELIUM DILUTION REFRIGERATORS
On-Line Control Systems
Microcomputer on-line control system for a big helium liquefier, 10:39777 (RA;SU;In Russian)
HELIUM II
The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K).
Convection
Oscillatory convection in a dilute ^{3}He—superfluid ^{4}He solution, 10:40495 (J;US)
HELIUM IONS
Atom-Atom Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Energy Losses
Projectile charge dependence of heavy ion stopping, 10:40863 (R;GB)
Ion-Atom Collisions
Cusp studies for simple collision systems, 10:40447 (R;HU)
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Data on ionization, excitation, dissociation and dissociative ionization of targets by helium ion bombardments, (1). Target ionization, excitation, dissociation and dissociative ionization induced by several keV to 3.5 MeV helium ions incident on thin gas targets, 10:40452 (R;JP)
Ion-Molecule Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
HELIUM METHOD
See ISOTOPE DATING
HEMATOPOIESIS
See BLOOD FORMATION
HEMOGLOBIN
Genes
Differential expression of murine adult hemoglobins in early ontogeny, 10:40233 (R;US)
Quantity Ratio
Differential expression of murine adult hemoglobins in early ontogeny, 10:40233 (R;US)
HEMOPOIESIS
See BLOOD FORMATION
HERBICIDES
Soil Chemistry
Persistence of paraquat in the soil and observations with other herbicides relevant to the theme of bound residues, 10:40243 (RA;XA)
Tracer Techniques
Persistence of paraquat in the soil and observations with other herbicides relevant to the theme of bound residues, 10:40243 (RA;XA)
Persistence of atrazine and its metabolites in soil eight years after a single herbicide application and their uptake by oat plants, 10:40248 (RA;XA)
Uptake
Persistence of atrazine and its metabolites in soil eight years after a single herbicide application and their uptake by oat plants, 10:40248 (RA;XA)
HERBS
Plant Growth
Field studies of sweet potatoes and cowpeas in response to elevated carbon dioxide. Progress report (Ipomoea batatas; Vigna unguiculata), 10:40306 (R;US)
HETEROCYCLIC COMPOUNDS
See also THIONAPHTHENES
Mass Spectra
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)

Molecular Weight
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)

HEUSLER ALLOYS
Magnetic Properties
Coexistence of ordered magnetism and superconductivity in Pd_2YbSn, 10:39575 (J;US)
Superconductivity
Coexistence of ordered magnetism and superconductivity in Pd_2YbSn, 10:39575 (J;US)

HEXADECANE
Vapor Pressure
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Seventh quarterly progress report, March 1-June 1, 1985, 10:38714 (R;US)

HEXAGONAL CLOSE PACKED
See HCP LATTICES

HEXANOLS
Adsorption
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)

HEXYL ALCOHOLS

HHIRF
See HHIRF ACCELERATOR

HHIRF ACCELERATOR
Gold Ions
Charge-state distributions of 100, 175, 275, and 352 MeV gold ions emerging from thin carbon foils, 10:39834 (R;US)
Multicharged Ions
Charge-state distributions of 100, 175, 275, and 352 MeV gold ions emerging from thin carbon foils, 10:39834 (R;US)

HIGGS BOSONS
Particle Identification
Charm, bottom and Higgs search, 10:40578 (RA;DE)

HIGGS MODEL
Saddle-Point Method
Improved mean-field calculation for the lattice Abelian Higgs model, 10:40633 (R;DD)

HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Basic problems of high energy physics, 10:40587 (RA;SU;In Russian)
Prospects of theoretical particle physics, 10:40552 (RA;XC)
Meetings
Workshop on the future of intermediate energy physics in Europe. Proceedings, 10:40497 (R;DE)
Research Programs
Experimental high energy physics. Progress report, 1 January 1985-31 December 1985, 10:40504 (R;US)
High energy accelerator and colliding beam user group. Progress report, March 1, 1983-February 29, 1984, 10:40496 (R;US)
Particle physics experiments 1984, 10:40541 (R;GB)
Progress report of a research program in experimental high energy physics, January 1, 1985-December 31, 1985. Task C, 10:40503 (R;US)
Research in particles and fields and their interactions. Technical progress report, November 1981-December 1982, 10:40565 (R;US)
Research in high energy physics (particles and fields and their interactions). Technical progress report, September 1, 1978-July 30, 1979, 10:40564 (R;US)
Theoretical high-energy physics. Progress report, 1 January-31 December 1985, 10:40614 (R;US)

HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY

HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES

HIGH PRESSURE COOLANT INJECTION
Availability
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)

HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS

HIGH-BETA PLASMA
Beta from 0.1 to 1.
Current-Drive Heating
Current drive in a high beta tokamak using magnetic pumping, 10:41014 (J;GB)

HIGH-LEVEL RADIOACTIVE WASTES
Leaching
Proceedings of the third spent fuel workshop, 10:38932 (R;SE)
Meetings
Proceedings of a technical session on rock mechanics "Advance in laboratory sample testing", 10:38882 (R;XE)
Monitored Retrievable Storage
Retrieval effects on ventilation and cooling requirements for a nuclear waste repository, 10:38874 (R;US)
Radioactive Waste Disposal
Determining probabilities of geologic events and processes, 10:38929 (R;US)
Implementation of thermal/structural interactions in situ tests at the Waste Isolation Pilot Plant facility, 10:38926 (R;US)
Proposed risk acceptance criterion for nuclear fuel waste disposal, 10:38866 (R;CA)
Thermomechanical response of salt and hard rocks to thermal loading by wastes over 10 years old, 10:38906 (RA;US)
TOUGH: a numerical model for strongly heat driven flow in partially saturated media, 10:38904 (RA;US)
Radioactive Waste Processing
Commercial LFCM vitrification technology. Quarterly progress report, October-December 1984, 10:38921 (R;US)
Design features of the radioactive Liquid-Fed Ceramic Melter system, 10:38920 (R;US)
Development of partitioning method; partitioning test with nuclear fuel reprocessing waste prepared at PNC, 2, 10:38901 (R;JP;In Japanese)
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)
Radioactive Waste Storage
Interim storage of solidified fission products from fuel element reprocessing with utilization of obtaining post-decay heat, 10:38851 (R;DE;In German)
Savannah River Interim Waste Management Program Plan, FY 1985, 10:38879 (R;US)
Underground Disposal
Analytical performance models for geologic repositories containing radioactive waste, 10:38912 (RA;US)
Geochemistry research planning for underground repositories, 10:38910 (RA;US)
Hydrothermal alteration of host rocks near buried high-level radioactive waste, 10:38909 (RA;US)
Model for partially saturated flow in fractured porous media, 10:38905 (RA;US)
Proceedings of a technical session on rock mechanics "Advance in laboratory sample testing", 10:38882 (R;XE)
Thermodynamic coupling of transport processes in near-field regions of nuclear waste repositories, 10:38948 (RA;US)
Trial storage of high-level waste in the Asse II salt mine. Final report 1980, 10:38884 (R;XE)
Trial storage of high-level waste cylinders in the Asse II salt mine. Final report 1977/1978, 10:38885 (R;XE)
Vitrification
Commercial LFCM vitrification technology. Quarterly progress report, October-December 1984, 10:38921 (R;US)
Design features of the radioactive Liquid-Fed Ceramic Melter system, 10:38920 (R;US)
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)

HIGH-PURITY GE DETECTORS
Calibration
Efficiency calibration of HPGe and Ge(Li) detectors for large-volume samples, 10:39944 (RA;CS;In Czech)
Charge Collection
Charge collection time effecting energy and time resolution of semiconductor detectors, 10:39997 (R;SU;In Russian)

Efficiency
Efficiency calibration of HPGe and Ge(Li) detectors for large-volume samples, 10:39944 (RA;CS;In Czech)
Pulse Rise Time
Charge collection time effecting energy and time resolution of semiconductor detectors, 10:39997 (R;SU;In Russian)
Sensitivity
Sensitivity of experiment on search for neutrinoless double beta-decay by using semiconductor detectors, 10:40033 (R;SU;In Russian)
Timing Properties
Time performance investigation of the spectrometer with a planar HPGe detector, 10:39991 (R;SU;In Russian)

HIGH-VOLTAGE PULSE GENERATORS
Performance Testing
Tests of an explosive-driven coaxial generator, 10:39780 (R;US)

HOG FUEL
See WOOD WASTES

HOLIFIELD HEAVY ION RESEARCH FACILITY
See HHIRF ACCELERATOR

HOLMIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Equations of State
New equations of state for Eu, Gd, and Ho, 10:40458 (R;US)
Magnetic Properties
Magnetic x-ray scattering studies of holmium using synchrotron radiation, 10:39574 (J;US)
Neutron Reactions
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)

HOLMIUM 165 TARGET
Argon 40 Reactions
Fast fission phenomena, 10:40851 (RA;SU)
Iron 56 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Neon 20 Reactions
Investigation of some approximation used in promptly emitted particle models, 10:40748 (RA;FR)

HOPE CREEK-1 REACTOR
Salem, New Jersey, USA. Prior to November 1973 known as Newbold Island-1 Reactor, for the initially planned site and older material is so indexed.
Containment
Demonstration of containment purge and vent valve operability for the Hope Creek Generating Station, Unit 1 (Docket No. 50-354), 10:39257 (R;US)
Design Basis Accidents
Demonstration of containment purge and vent valve operability for the Hope Creek Generating Station, Unit 1 (Docket No. 50-354), 10:39257 (R;US)
Loss of Coolant
Demonstration of containment purge and vent valve operability for the Hope Creek Generating Station, Unit 1 (Docket No. 50-354), 10:39257 (R;US)

HOT CELLS
Modifications
Los Alamos upgrade in metallographic capabilities, 10:39729 (R;US)

HOT GAS CLEANUP
Technology Assessment
Hot gas cleaning technology for direct coal-fired cycles -- issues and tradeoffs, 10:39077 (RA;US)

HOT LABS
Scalers
Two-channel energy-selective workplace for isotope labs based on MMT system, 10:40218 (RA;HU)

HOT PLASMA
Electric Conductivity
Global conditions and electron energy transport*, 10:41019 (J;US)
Energy Absorption
Local power conservation for linear wave propagation in an inhomogeneous plasma, 10:41004 (J;US)
Energy Conversion
Local power conservation for linear wave propagation in an inhomogeneous plasma, 10:41004 (J;US)

HOT-DRY-ROCK SYSTEMS
Fracture Mechanics
Does hydraulic fracturing theory work in jointed rock masses?, 10:39055 (BA;US)
Hydraulic Fracturing
Does hydraulic fracturing theory work in jointed rock masses?, 10:39055 (BA;US)
Hot dry rock geothermal reservoir fracturing initial field operations-1982, 10:39056 (BA;US)
Microearthquakes induced during hydraulic fracturing at the Fenton Hill HDR site: The 1982 experiments, 10:39054 (BA;US)
Resource Potential
Roosevelt Hot Springs/Hot dry rock prospect and evaluation of the Acord 1-26 well, 10:39031 (BA;US)

HOT-WATER PROCESSES
Numerical Analysis
Methods of enhancing fluid communication in oil sands, 10:38810 (RA;US)

HOUSES
Energy Conservation
Demonstration project Landstuhl: Energy saving and solar energy utilization in houses, 10:39435 (R;DE;In German)
Passive Solar Heating Systems
Demonstration project Landstuhl: Energy saving and solar energy utilization in houses, 10:39435 (R;DE;In German)

HPCI
See HIGH PRESSURE COOLANT INJECTION

HTGR TYPE REACTORS
See also VHTR REACTOR
Fuel Elements
Experimental investigation on the release of actinide and cesium from irradiated particles of spherical fuel element of high temperature reactor, 10:39131 (RA;BR;In Portuguese)
Reactor Safety
German offsite accident consequence model for nuclear facilities: further development and application, 10:39299 (RA;US)

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN CELLS
See ANIMAL CELLS

HUMAN FACTORS ENGINEERING
Research Programs
Operational safety related human engineering research in Finland, 10:39316 (RA;HU)

HUMAN POPULATIONS
See also A-BOMB SURVIVORS
MINORITY GROUPS
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)
Delayed Radiation Effects
Follow-up of irradiated human populations, 10:40287 (RA;CA)
Dose Commitments
Studies on the radio-ecology of tritium in the city of Marburg and its surroundings in 1981: Radiation load of the population through body intake of tritium, 10:40283 (R;DE;In German)
Low Dose Irradiation
Follow-up of irradiated human populations, 10:40287 (RA;CA)
Radiation Doses
Comparison of alternative methods of calculating complementary cumulative distribution functions of health effects following an atmospheric radioactive release, 10:39247 (R;GB)
Environmental radioactivity in Canada, 1980. Radiological monitoring annual report, 10:40890 (R;CA)

Radiation Hazards
Biological and human health effects of extremely low-frequency electromagnetic fields. Post-1977 literature review. Final report 1977-1984, 10:40316 (R;US)

HUMANS
See HUMAN POPULATIONS

HUNGARIAN PAKS-1 REACTOR
See PAKS-1 REACTOR

HUNGARIAN PAKS-2 REACTOR

HYDRAULIC FRACTURES
Crack Propagation
Further development of a fracture model for lenticular gas sands. Final report, 10:38803 (R;US)
PDCRAC: a three-dimensional hydrofracture program. User's manual, 10:38791 (R;US)
Geometry
Further development of a fracture model for lenticular gas sands. Final report, 10:38803 (R;US)
Mathematical Models
Further development of a fracture model for lenticular gas sands. Final report, 10:38803 (R;US)
Orientation
In situ stress measurements in inclined holes in the North Sea: application to enhanced oil recovery, 10:38789 (R;US)

HYDRAULIC FRACTURING
Waste disposal by hydrofracture and application of the technology to the management of hazardous wastes, 10:38873 (R;US)
Computerized Simulation
PDCRAC: a three-dimensional hydrofracture program. User's manual, 10:38791 (R;US)
Performance
Hot dry rock geothermal reservoir fracturing initial field operations-1982, 10:39056 (BA;US)
Rock Mechanics
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
Seismic Detection
Microearthquakes induced during hydraulic fracturing at the Fenton Hill HDR site: The 1982 experiments, 10:39054 (BA;US)

HYDRAULIC RAMS
See PUMPS

HYDRAZINE
Chemical Reactions
Use of hydrazine as an alternate source of energy, 10:38988 (R;BR)

HYDROCARBON LOGGING
See WELL LOGGING

HYDROCHLORIC ACID
Air Pollution Monitoring
Hydrogen chloride measurements with a DAS lidar in the marine atmosphere, 10:40129 (R;DE)

HYDRODYNAMICS
See also MAGNETOHYDRODYNAMICS
Computer Calculations
Construction of the Voronoi mesh on a sphere, 10:40957 (J;US)
Film Flow
Effects of the inhomogeneous current and magnetic field on the flow characteristics of the mercury film of a chlorine alkali electrolysis cell, 10:39758 (R;DE;In German)
Mesh Generation
Conservative rezoning algorithm for generalized two-dimensional meshes, 10:40958 (J;US)

HYDROELECTRIC POWER
Environmental Impacts
Issue Backgrounder: west of the divide - Fish and Wildlife projects in western Montana, 10:38992 (R;US)

HYDROELECTRIC POWER PLANTS
See also PUMPED STORAGE POWER PLANTS
Data Compilation
Electric Power Monthly, April 1985, 10:39405 (R;US)
Statistical Data
Inventory of power plants in the United States, 1984, 10:39066 (R;US)
Statistics
Electric Power Monthly, April 1985, 10:39405 (R;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROGEN
Atom-Molecule Collisions
Dynamics of inelastic $H+D_2$ collisions: Product quantum state distributions at 1.1 and 1.3 eV collision energy, 10:40469 (J;US)
Product state distributions for inelastic and reactive $H+D_2$ collisions as functions of collision energy, 10:40468 (J;US)
Chemical Radiation Effects
Irradiation effect on the reaction of mixture of carbon monoxide and hydrogen, (3). Radiation chemical reaction at elevated pressure under gas circulation, 10:39698 (R;JP;In Japanese)
Chemical Reactions
Effect of J dependence of Raman cross sections on CARS product quantum state distributions for the $H+D_2 \rightarrow HD+D$ reaction, 10:39691 (J;US)
Chemisorption
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Combustion
Data analyses for Nevada Test Site (NTS) premixed combustion tests, 10:39357 (R;US)
Combustion Kinetics
Laser fluorescence studies of the detailed flame chemistry of nitrogen, sulfur, and carbon. Final technical report, March 1, 1982-May 31, 1983, 10:39709 (R;US)
Compression
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
Emission Spectra
Bound-free ultraviolet emission from triatomic hydrogen, 10:40478 (J;US)
Ion-Atom Collisions
Low energy charge capture cross sections, 10:40437 (R;GB)
Molecular orbitals for charge exchange, 10:40436 (R;GB)
Optical Properties
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
Partial Pressure
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)
Raman Effect
Ultrahigh pressures: Optical observations and Raman measurements of hydrogen and deuterium to 1.47 Mbar, 10:39637 (J;US)
Rydberg States
Bound-free ultraviolet emission from triatomic hydrogen, 10:40478 (J;US)
Ultraviolet Spectra
Bound-free ultraviolet emission from triatomic hydrogen, 10:40478 (J;US)

HYDROGEN 1 MINUS BEAMS
Beam Currents
Effect of wall material on H^- production in a multicusp source, 10:41045 (J;US)
Beam Production
Effect of wall material on H^- production in a multicusp source, 10:41045 (J;US)
Wall Effects
Effect of wall material on H^- production in a multicusp source, 10:41045 (J;US)

HYDROGEN 1 TARGET
Proton Reactions
Differential cross section of elastic N-N scattering in noneikonal approximation, 10:40673 (RA;SU;In Russian)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID
HYDROGEN HYDROXIDES
See WATER
HYDROGEN IONS 1 MINUS
For H_1^- ions.
Atom Collisions
Study of excitations during collisionally-induced electron detachment of negative ions. Annual report, 1 August 1983-31 July 1984, 10:40435 (R;US)
Electron Detachment
Study of excitations during collisionally-induced electron detachment of negative ions. Annual report, 1 August 1983-31 July 1984, 10:40435 (R;US)
HYDROGEN IONS 1 PLUS
For H_1^+ ions.
Spin Orientation
Electron-spin-polarized targets for a collisionally-pumped polarized-ion source, 10:39870 (R;US)
HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS
HYDROGEN PHOSPHATES
See PHOSPHORIC ACID
HYDROGEN PRODUCTION
Computerized Simulation
Hydrogen from coal via Tin Redox. Energy Related Inventions Program Invention No. 3. Final report, 10:38977 (R;US)
Economic Analysis
Hydrogen from coal via Tin Redox. Energy Related Inventions Program Invention No. 3. Final report, 10:38977 (R;US)
Feasibility Studies
Hydrogen from coal via Tin Redox. Energy Related Inventions Program Invention No. 3. Final report, 10:38977 (R;US)
Recommendations
Hydrogen from coal via Tin Redox. Energy Related Inventions Program Invention No. 3. Final report, 10:38977 (R;US)
HYDROGEN SULFIDES
Catalytic Effects
Catalytic upgrading of solvent-refined lignite using hydrogen sulfide and prepared iron oxide-supported catalysts, 10:38681 (R;US)
Removal
The direct chlorination process for Hydrogen Sulfide Abatement, 10:39046 (BA;US)
HYDROGENATION
Catalysts
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985 (Hydrodeoxygenation), 10:38696 (R;US)
Catalytic upgrading of solvent-refined lignite using hydrogen sulfide and prepared iron oxide-supported catalysts, 10:38681 (R;US)
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
Combined processing of coal and heavy resids. Progress report, January 16, 1985-April 15, 1985, 10:38686 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
Deactivation of direct coal liquefaction catalysts by carbonaceous deposits, 10:38705 (R;US)
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)
Organic Solvents
Combined processing of coal and heavy resids. Progress report, January 16, 1985-April 15, 1985, 10:38686 (R;US)
HYDROTHERMAL CONVECTIVE SYSTEMS
See HYDROTHERMAL SYSTEMS
HYDROTHERMAL SYSTEMS
Chemical Reactions
Continuum model for simultaneous chemical reactions and mass transport in hydrothermal systems, 10:39060 (J;GB)
Rock-Fluid Interactions
Time estimates for oxygen isotopic exchange during mineralfluid interaction in hydrothermal systems, 10:39062 (BA;US)
Two-Phase Flow
Test facility to investigate two-phase steam/water flow in porous media, 10:39048 (RA;US)
HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
Mass Spectra
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985 (Hydroxyl aromatics), 10:38712 (R;US)
Molecular Weight
Separation and characterization of coal derived components. Report period: 1 April-30 June 1985 (Hydroxyl aromatics), 10:38712 (R;US)
HYDROXYBENZENE
See PHENOL
HYDROXYL RADICALS
Chemical Reaction Kinetics
Rate constants for the reaction of hydroxyl radicals with acetaldehyde from 244—528 K, 10:39696 (J;US)
Electronic Structure
Systematic study of molecular anions within the self-consistent-field approximation: OH^-, CN^-, C_2H^-, NH^-_2, and CH^-_3, 10:40472 (J;US)
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
K meson-nucleus interactions: strangeness and nuclear matter, 10:40796 (R;US)
Lifetime
Lifetime of hypernuclei, 10:40810 (RA;DE)
Weak Hadronic Decay
Lifetime of hypernuclei, 10:40810 (RA;DE)
HYPERONS
See also LAMBDA PARTICLES
SIGMA PARTICLES
XI PARTICLES
Semileptonic Decay
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
Weak Hadronic Decay
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
HYPERTHERMIA
Radiosensitivity Effects
Modification of radiosensitivity of mammalian cells by means of hyperthermia and chemical agent. Coordinated programme on improvement of cancer therapy by the combination of treatment by conventional radiation and physical or chemical means. Final report for the period 15 October 1982-14 October 1984, 10:40281 (R;XA)

I

IAEA
Proliferation
IAEA and non-proliferation: is quiescence progress, 10:39387 (R;BE)
I-BEAM TYPE REACTORS
See ION BEAM FUSION REACTORS
ICE
Age Estimation
Dating technique tested, 10:40396 (J;US)

Permeability
Annual sea ice. An air-sea gas exchange moderator, 10:40184 (RA;US)

ICELAND
Agriculture
Geothermal soil heating in Iceland, 10:39059 (BA;US)
Geothermal Fields
Injection testing in 1982 at the Svartsengi high-temperature field in Iceland, 10:39052 (BA;US)

ICF DEVICES
Feasibility Studies
Heavy ion fusion physics, 10:41053 (J;GB)

ICRP
Recommendations
ICRP recommendations and Canadian regulations, 10:40901 (RA;CA)

IDAHO
Rivers
Pacific Northwest Rivers Study assessment guidelines: Idaho, 10:39382 (R;US)
Water Resources
Availability and chemistry of ground water on the Bruneau Plateau and adjacent eastern plain in Twin Falls County, south-central Idaho, 10:39385 (R;US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Radioactive Waste Management
Options for treatment, storage, and/or disposal of radioactive mixed waste at the Idaho National Engineering Laboratory, 10:38881 (R;US)

IEA
See INTERNATIONAL ENERGY AGENCY

IGNEOUS ROCKS
See also VOLCANIC ROCKS
Well Logging
Geophysical well logs for eleven drill holes at the Colorado School of Mines Experimental Mine Site, Idaho Springs, Colorado, 10:40380 (R;US)

IGNITION
Mathematical Models
Modeling short pulse duration shock initiation of solid explosives, 10:40107 (R;US)

ILLINOIS
Meteorology
Pipeline gas demonstration plant: Phase I. Climatological and meteorological report (Illinois Coal Gasification Group; Perry County), 10:38674 (R;US)
Water Resources
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume III, 10:38668 (R;US)

ILLUMINATION SYSTEMS
See LIGHTING SYSTEMS

IMINOUREA
See GUANIDINES

IMMEDIATE RADIATION EFFECTS
See EARLY RADIATION EFFECTS

IMMOBILIZATION
See VITRIFICATION

IMPACT SHOCK
Dislocations
Dislocation kinetics behind shear shocks, 10:40941 (R;US)
Explosions
Response of a reactor building due to detonation of flat layered gas clouds, 10:39341 (R;DE;In German)
Piezometry
Studies of the Bauer piezoelectric polymer gauge (PVF_2) under impact loading, 10:40095 (R;US)
Thermodynamic Model
Dislocation kinetics behind shear shocks, 10:40941 (R;US)

IMPERMEABLE DRY ROCK
See HOT-DRY-ROCK SYSTEMS

IN CORE INSTRUMENTS
See also specific instruments plus FUEL ASSEMBLIES or REACTOR CORES.
Electronics systems for experimental reactor physics, 10:39231 (RA;SU)

INCINERATION
See COMBUSTION

INCLUSIONS
Wave Propagation
Theory of elastic wave scattering: Applications of the method of optimal truncation, 10:40925 (J;US)

INCOMPLETE FUSION REACTIONS
Precompound-Nucleus Emission
Competition between peripheral and central emission in incomplete fusion reactions, 10:40727 (RA;FR)

INCOMPRESSIBLE FLOW
Flow Models
Turbulence in two-field incompressible flow, 10:40486 (R;US)
Numerical Solution
Nodal coarse-mesh method for the efficient numerical solution of laminar flow problems, 10:40493 (J;US)
Turbulence
Turbulence in two-field incompressible flow, 10:40486 (R;US)

INCONEL 600
Cold Working
Stress-corrosion cracking of Inconel alloy 600 in high-temperature water - an update, 10:39579 (J;US)
Stress Corrosion
Stress-corrosion cracking of Inconel alloy 600 in high-temperature water - an update, 10:39579 (J;US)

INCONEL 718
Mechanical Properties
Effect of reduction of strategic Columbium addition in 718 Alloy on the structure and properties. Final report, 10:39552 (R;US)
Microstructure
Effect of reduction of strategic Columbium addition in 718 Alloy on the structure and properties. Final report, 10:39552 (R;US)

INDIAN RESERVATIONS
Water Quality
Water resources on the Pueblo of Laguna, west-central New Mexico, 10:40357 (R;US)
Water Supply
Water resources on the Pueblo of Laguna, west-central New Mexico, 10:40357 (R;US)

INDICATOR SPECIES
See BIOLOGICAL INDICATORS

INDIUM 111
Isotope Production
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
Tissue Distribution
Investigation of protein binding of radiogallium. Progress report, 10:40216 (R;US)

INDIUM 115
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)

INDIUM ARSENIDES
Electrical Properties
Materials-process interactions in ternary alloy semiconductors. Final report, 1 May 1982-31 October 1983, 10:39600 (R;US)
Optical Properties
Materials-process interactions in ternary alloy semiconductors. Final report, 1 May 1982-31 October 1983, 10:39600 (R;US)

INDIUM BASE ALLOYS
Compacting
Shock consolidation of IN-100 nickel-base superalloy powder, 10:39563 (R;US)
Explosive Forming
Shock consolidation of IN-100 nickel-base superalloy powder, 10:39563 (R;US)

INDOOR AIR POLLUTION
Occupational Safety
Measurement of exhaust emissions from diesel-powered forklifts during operations in ammunition-storage magazines. Final report, 23 July 1984-15 March 1985 on Phase 2, 10:40120 (R;US)

INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS

ETHANOL PLANTS

Burners
Improved oxygen-separator development program. Topical report, December 1982-April 1983, 10:38808 (R;US)
Cogeneration
Advanced Thermionic Technology Program: summary report. Volume 3. Final report, 10:39423 (R;US)
Fire Hazards
Fire severity estimating software, 10:39441 (R;US)
Heat Losses
Using infrared thermography for industrial energy conservation. Final report, 10:39464 (R;US)
Heat Pumps
High-temperature heat pumps for industry, 10:39463 (R;GB)
Mixers
Power consumption data for various mixing vessel arrangements, 10:39454 (R;GB)
Process Heat
Advanced Thermionic Technology Program: summary report. Volume 3. Final report, 10:39423 (R;US)
Solar Equipment
Utilization of solar energy in industry: technical and economical evaluation, prospective, 10:39462 (R;FR;In French)

INDUSTRIAL SECTOR
See INDUSTRY

INDUSTRIAL WASTES
Separation Processes
Field testing of a biphase rotary separator turbine for concentration of industrial process fluids. Technical progress report No. 18, 18 May-14 June 1985, 10:38797 (R;US)

INDUSTRY
See also AGRICULTURE
AUTOMOTIVE INDUSTRY
COAL INDUSTRY
FOOD INDUSTRY
METAL INDUSTRY
NATURAL GAS INDUSTRY
NUCLEAR INDUSTRY
PETROLEUM INDUSTRY
SOLAR INDUSTRY
Energy Conservation
Energy efficiency in American industry: leveraging a national effort for increasing industrial conservation technology. Final report, 10:39376 (R;US)
Energy Consumption
Advanced Thermionic Technology Program: summary report. Volume 3. Final report, 10:39423 (R;US)

INELASTIC SCATTERING
Electromagnetic Form Factors
Coincidence form factors in electron scattering. Final report, 10:40643 (R;US)
Polarization
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)

INERTIAL CONFINEMENT
A dynamic plasma confinement by inertial forces.
Magnetic Insulation
Stability of magnetically insulated electron flow, 10:40998 (J;US)
Targets
On the fabrication of a uniform thick fuel layer inside a cryogenic inertial confinement fusion target, 10:41049 (J;US)
Thermonuclear Fuels
On the fabrication of a uniform thick fuel layer inside a cryogenic inertial confinement fusion target, 10:41049 (J;US)

INERTIAL CONFINEMENT FUSION DEVICES
See ICF DEVICES

INFORMATION SYSTEMS
Computer Graphics
Integrated hardware/software configuration for the evaluation of nuclear data, 10:41096 (RA;XA)
Computer-Aided Design
Integrated hardware/software configuration for the evaluation of nuclear data, 10:41096 (RA;XA)

INFORMATION THEORY
Memory Devices
Distributed memory. Technical report, 10:41094 (R;US)

INFRARED RADIATION
Measuring Instruments
Laboratory design and test procedures for quantitative evaluation of infrared sensors to assess thermal anomalies, 10:40093 (R;US)

INFRARED SPECTRA
Sample Holders
Lens and Wedge Absorption Cells for FT-IR spectroscopy, 10:39684 (J;US)

INFRARED THERMOGRAPHY
Test Facilities
Laboratory design and test procedures for quantitative evaluation of infrared sensors to assess thermal anomalies, 10:40093 (R;US)

INHALATION
Dose Limits
Correspondence between activity and mass for the annual limits on intake by inhalation for occupational exposure, 10:40888 (R;FR;In French)

INJECTION (BEAMS)
See BEAM INJECTION

INJECTION FLUIDS
See DISPLACEMENT FLUIDS

INJECTION WELLS
Resistivity Logging
Geothermal injection monitoring with d.c. resistivity methods, 10:39042 (BA;US)

INPUT WELL
See INJECTION WELLS

INSECTICIDES
See also DIELDRIN
LINDANE
MALATHION
PARATHION
Biodegradation
Studies of ^{14}C-methamidophos residues and their binding to Costa Rican vegetables and soils, 10:40165 (RA;XA)
Biological Accumulation
Bound residues of ^{14}C-chlorfenvinphos in winter rape and soil, 10:40240 (RA;XA)
Foliar Uptake
Residues of endosulfan in tomato, 10:40247 (RA;XA)
Tracer Techniques
Bound residues of ^{14}C-chlorfenvinphos in winter rape and soil, 10:40240 (RA;XA)
Residues of endosulfan in tomato, 10:40247 (RA;XA)

IN-SITU GASIFICATION
Field Tests
Underground coal gasification, 10:38679 (RA;US)
Gas Yields
Underground coal gasification, 10:38679 (RA;US)
Research Programs
Oil shales, tar sands, and underground coal gasification. Quarterly technical progress report, October-December 1984, 10:38809 (R;US)
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)

IN-SITU PROCESSING

Information Dissemination
Coal research projects: supply, transport and the environment, 10:38733 (R;GB)
INTERNATIONAL TOKAMAK REACTOR
See INTOR TOKAMAK
INTERSECTING BEAMS
See COLLIDING BEAMS
INTERSTELLAR GRAINS
Simulation
Preparation, analysis, and release of simulated interplanetary grains into low earth orbit, 10:40411 (R;US)
INTOR TOKAMAK
International Tokamak Reactor.
Divertors
Influence of erosion and redeposition processes on the lifetime of impurity control components: An assessment for TiC coatings, 10:39578 (J;US)
Limiters
Influence of erosion and redeposition processes on the lifetime of impurity control components: An assessment for TiC coatings, 10:39578 (J;US)
INTRUSION DETECTION SYSTEMS
Data Acquisition Systems
Interior sensor and environment monitor, 10:38966 (R;US)
Display Devices
Alarm display and assessment technology, 10:39783 (R;US)
IODIDES
See also CALCIUM IODIDES
COPPER IODIDES
MERCURY IODIDES
SILVER IODIDES

Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

IODINE
Forbidden Transitions
Two-photon spectroscopy of np and nf Rydberg states of atomic iodine, 10:40474 (J;US)
Photoionization
Two-photon spectroscopy of np and nf Rydberg states of atomic iodine, 10:40474 (J;US)
Rydberg States
Two-photon spectroscopy of np and nf Rydberg states of atomic iodine, 10:40474 (J;US)

IODINE 123
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)

IODINE 129
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

IODINE 131
Foliar Uptake
Beryllium-7 deposition to terrestrial vegetation in Tennessee, 10:40137 (R;US)
Isotopic Exchange
^{131}I-3-iodobenzylguanidine (^{131}I-3-IBG) as a scintigraphic agent for the visualization of adrenal medulla tumors, 10:39702 (R;NO)
Tissue Distribution
Pancreas accumulation of radioiodinated HIPDM in mice and rats, 10:40228 (J;US)

IODINE IODIDES
See IODINE

ION BEAM FUSION REACTORS
Ion Sources
Study on possibility of development of a laser multicharged ion source for a heavy ion fusion driver, 10:41036 (RA;SU;In Russian)

ION BEAM TYPE REACTORS
See ION BEAM FUSION REACTORS

ION BEAMS
See also HYDROGEN 1 MINUS BEAMS
Beam Neutralization
Numerical simulation of electron-ion beam dynamics, 10:39812 (R;SU;In Russian)
Beam Production
High current ion source, 10:40470 (J;US)

ION DETECTION
Ambipolar Diffusion
Ion identification by ambipolar effusion from the positive column in a deuterium glow discharge, 10:40979 (R;NO)
Liquid Scintillation Detectors
Scintillation yields by relativistic heavy ions and the relation between ionization and scintillation in liquid argon, 10:40050 (J;NL)

ION RINGS
Plasma Confinement
Proton ring trapping in a gated magnetic mirror, 10:40992 (J;US)
Trapping
Proton ring trapping in a gated magnetic mirror, 10:40992 (J;US)

ION SOURCES
See also PENNING ION SOURCES
Beam Emittance
Study on characteristics of a high-frequency ion source for an electrostatic accelerator, 10:39836 (R;SU;In Russian)
Colliding Beams
Ultra-relativistic collisions of heavy ions, 10:39838 (RA;DE)
Current Density
Optimum extracted negative-ion current densities from tandem high-density systems, 10:40466 (J;US)
Design
Ultra-relativistic collisions of heavy ions, 10:39838 (RA;DE)
Electrostatic Accelerators
Study on characteristics of a high-frequency ion source for an electrostatic accelerator, 10:39836 (R;SU;In Russian)
Fabrication
High current ion source, 10:40470 (J;US)
Ion Beams
Ultra-relativistic collisions of heavy ions, 10:39838 (RA;DE)
Optimization
Optimum extracted negative-ion current densities from tandem high-density systems, 10:40466 (J;US)
Power Supplies
Voltage-controlled power supplies in nuclear physics experimental arrangements, 10:39849 (RA;SU)
Relativistic Range
Ultra-relativistic collisions of heavy ions, 10:39838 (RA;DE)
Valves
Study on characteristics of valves for pulsed gas feed into a cyclotron multicharged ion source, 10:39855 (R;SU;In Russian)

ION WAVE INSTABILITY
Excitation
Can the electrostatic ion-cyclotron instability be driven by a two-dimensional sheath, 10:41020 (J;GB)
Electrostatic ion-cyclotron instability driven by a slow electron drift, 10:41021 (J;GB)

ION-ATOM COLLISIONS
Electrons with continuous energy distribution from energetic heavy ion collisions, 10:40446 (R;HU)

IONIC REACTIONS
See IONS

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONIZATION CHAMBERS
See also BRAGG GRAY CHAMBERS
FISSION CHAMBERS
LIQUID IONIZATION CHAMBERS
MULTIWIRE IONIZATION CHAMBERS
Accuracy
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)
Analog-to-Digital Converters
Microcomputer based charge-to-digital converter and data acquisition system for measurements of fast time-varying radiation fields, 10:40023 (RA;SU)
Data Acquisition Systems
Microcomputer based charge-to-digital converter and data acquisition system for measurements of fast time-varying radiation fields, 10:40023 (RA;SU)
Efficiency
Recombination in ionization chambers in ^{60}Co gamma beam, 10:39945 (RA;CS;In Czech)
Recombination
Recombination in ionization chambers in ^{60}Co gamma beam, 10:39945 (RA;CS;In Czech)
Sensitivity
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)
Specifications
Electret ionization chamber, a detector of mixed neutron/gamma radiation dose, 10:39929 (RA;CS;In Czech)
Time Resolution
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)

IONOSPHERE
Charged-Particle Transport
IMS (International Magnetospheric Study) contributions to the understanding of auroral precipitation, transport, and particle sources, 10:40428 (R;US)

IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also ARGON IONS

CARBON IONS
DEUTERIUM IONS
HEAVY IONS
HELIUM IONS
LITHIUM IONS
MULTICHARGED IONS
NICKEL IONS
OXYGEN IONS
SULFUR IONS
THORIUM IONS
URANIUM IONS

Stopping Power
Stopping power for ions in solids, 10:40872 (R;JP;In Japanese)

IRIDIUM
Carbon 12 Reactions
Study on reaction mechanism of incomplete fusion reactions; with reaction channel isolation on X-ray radiation of residual nuclei, 10:40761 (RA;SU;In Russian)

IRIDIUM ALLOYS
Microstructure
Energy-beam processing studies on Ta/U and Ir/Ta systems, 10:39580 (J;US)

IRIDIUM BORIDES
Magnetic Properties
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)

IRON
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)
Alpha Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Deuteron Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Helium 3 Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Neutron Reactions
Differential cross-sections for neutron scattering by Fe nuclei over the 0.1-0.8 MeV energy range, 10:40714 (RA;XA)
Pion Minus Reactions
Compton effect on π^- meson, 10:40519 (R;SU;In Russian)
Proton Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Radiation Transport
Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead, 10:40873 (R;JP)
Spin Waves
New interpretation of spin-wave behavior in nickel and iron, 10:39489 (R;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

IRON 54 TARGET
Proton Reactions
Spin-flip (p,n) reactions on ^{26}Mg, ^{54}Fe, and ^{56}Fe at selected proton bombarding energies in the range of 17 to 25 MeV, 10:40708 (R;US)

IRON 56 TARGET
Iron 56 Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Proton Reactions
Spin-flip (p,n) reactions on ^{26}Mg, ^{54}Fe, and ^{56}Fe at selected proton bombarding energies in the range of 17 to 25 MeV, 10:40708 (R;US)

IRON 57
Magnetic Moments
Moessbauer study of local change in the magnetic moment of Fe atoms at introducing Re atoms into Fe sublattice of $DyFe_2$ intermetallic compound, 10:40719 (RA;SU;In Russian)
Moessbauer Effect
Electron nuclear gamma resonance spectroscopy for studying mass transfer in solids, 10:40720 (RA;SU;In Russian)
Mossbauer effect and neutron diffraction study of the anomalous lattice behavior of U_6Fe, 10:39490 (R;US)

IRON 58 REACTIONS
Heavy Ion Fusion Reactions
Measurement of alpha decay rare events in experiments on synthesis of far transfermium elements, 10:40791 (RA;SU;In Russian)

IRON ALLOYS
See also INCONEL 600
IRON BASE ALLOYS
Crystal Lattices
Mossbauer effect and neutron diffraction study of the anomalous lattice behavior of U_6Fe, 10:39490 (R;US)
Grain Boundaries
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Hydrogen Embrittlement
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Intergranular Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Magnetic Properties
Itinerant electron ferromagnetism in Fe-alloyed, Ni_3Al based materials, 10:39493 (R;US)
Physical Radiation Effects
Experimental determination of the critical cavity radius in Fe-10% Cr for ion irradiation, 10:39584 (J;US)
Stress Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)

IRON BASE ALLOYS
See also STEELS
Extrusion
Hydrostatic extrusion of amorphous $Fe_{82}B_{12}Si_6$ and $U_{70}Cr_{30}$ ($Fe_{82}B_{12}Si_6$; $U_{70}Cr_{30}$), 10:39567 (R;US)

IRON GARNETS
See FERRITE GARNETS

IRON ORES
Energy Conservation
Intermittent injection of reduction gas in the shaft of a Midrex plant, 10:39458 (R;DE;In German)
Reduction
Intermittent injection of reduction gas in the shaft of a Midrex plant, 10:39458 (R;DE;In German)

IRON OXIDES
Catalytic Effects
Catalytic upgrading of solvent-refined lignite using hydrogen sulfide and prepared iron oxide-supported catalysts, 10:38681 (R;US)
Compression
Chemical synthesis under shock compression, 10:39559 (R;US)

IRRADIATION DEVICES
Beam Dumps
Remote recovery of irradiated tensile samples incapsulated in Pb-Bi, 10:39861 (R;US)
Cyclotrons
Low cost/low intensity 50 MeV proton irradiation facility, 10:39831 (R;US)
IRRADIATION RIGS
See IRRADIATION DEVICES
IRRIGATION
Energy Conservation
Sensitivity analysis of conservation opportunities in the irrigated agriculture sector of the Pacific Northwest, 10:39465 (R;US)
ISOCHRONOUS CYCLOTRONS
See also CRACOW AIC-144 CYCLOTRON
NAC CYCLOTRON
OSLO CYCLOTRON
Beam Monitors
System of the electron collimation and beam diagnostics on the U-240 cyclotron, 10:39858 (RA;SU;In Russian)
Collimators
System of the electron collimation and beam diagnostics on the U-240 cyclotron, 10:39858 (RA;SU;In Russian)
Data Acquisition Systems
Computerized system for the U-400 isochronous cyclotron parameter monitoring (ASKP U-400), 10:39852 (RA;SU;In Russian)
Maintenance
U-240 isochronous cyclotron base equipment modernization, 10:39798 (RA;SU;In Russian)
On-Line Measurement Systems
Computerized system for the U-400 isochronous cyclotron parameter monitoring (ASKP U-400), 10:39852 (RA;SU;In Russian)
ISOLATED LOCATIONS
See REMOTE AREAS
ISOTOPE DATING
Uranium-series and ESR dating at INS, 10:40339 (RA;NZ)
Calibration
Calibrating the radiocarbon record. Old and new facts, 10:40337 (RA;NZ)
Carbon 14
Radiocarbon dating of interlaboratory check samples, 10:40325 (RA;CA)
Data Acquisition Systems
Utilization of minicomputer in the radiocarbon analysis measurements, 10:40026 (RA;SU)
Research Programs
Current research: Part A, 10:40328 (R;CA)
Current research: Part B, 10:40331 (R;CA)
ISOTOPE DILUTION
^{15}N-labelled tracer techniques-analytical techniques, 10:40256 (RA;MX;In Spanish)
ISOTOPE PRODUCTION
Research Programs
Report of the Pretoria Cyclotron Group, 10:39879 (RA;ZA)
ISOTOPE PRODUCTION REACTORS
For the production of radioisotopes to be used in any application such as medicine, agriculture, industry, etc; not for tritium production.
See also TRIGA-2-MUSASHI REACTOR
WWR-SM ROSSENDORF REACTOR
Fuel Rods
Optimization of some parameters of the radioisotope production reactor (RPR) model, 10:39235 (RA;BR;In Portuguese)
Reactor Cores
Optimization of some parameters of the radioisotope production reactor (RPR) model, 10:39235 (RA;BR;In Portuguese)
Thermal Neutrons
Thermal flux maximization in the central irradiation chamber of a radioisotope production reactor, 10:39234 (RA;BR;In Portuguese)
ISRAEL
Nuclear Engineering
Nuclear education and the nuclear power program in Israel, 10:39395 (RA;IL)
Nuclear Power
Nuclear education and the nuclear power program in Israel, 10:39395 (RA;IL)
ISX TOKAMAK
ECR Heating
Experimental studies of thermal and non-thermal electron cyclotron phenomena in tokamaks, 10:40962 (R;US)
Plasma Heating
Wave absorption at the second harmonic of the electron-cyclotron frequency in a tokamak plasma, 10:40993 (J;US)
ITERATIVE METHODS
Parallel Processing
Iterative solution and finite element analysis in computational mechanics using supercomputers. Progress report, July 1, 1981-July 31, 1984, 10:41080 (R;US)
IUS
See TOTAL ENERGY SYSTEMS

J

JAERI
Japanese Atomic Energy Research Institute.
Research Programs
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute (No. 16). April 1, 1982-March 31, 1983, 10:39699 (R;JP)
JAERI TANDEM ACCELERATOR

LANTHANUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Electron Collisions
Core electron energy loss spectra in metallic La, 10:40867 (R;IT)
Excitation
Core electron energy loss spectra in metallic La, 10:40867 (R;IT)
Solvent Extraction
Synergistic effect in the solvent extraction of some trivalent lanthanides. 1. Behaviour of the elements La and Yb in the HTTA-TBP, HTTA-HDEHP, HDEHP-TBP systems, 10:39672 (R;BR)
Superconductivity
Phonon frequency shifts and the pressure dependence of Tsub(c) in lanthanum, 10:39508 (R;XA)
Transition Temperature
Phonon frequency shifts and the pressure dependence of Tsub(c) in lanthanum, 10:39508 (R;XA)
LANTHANUM 138
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
LANTHANUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)
LANTHANUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
LASER FUSION REACTORS
Plasma Diagnostics
Laser fusion experiments at Lawrence Livermore Laboratory, 10:41057 (BA;NL)
LASER IMPLOSIONS
Hydrodynamics
Hydrodynamics of long-scale-length plasmas. Summary, 10:41028 (R;US)
LASER RADIATION
Fluctuations
Observation of intensity fluctuations and mode correlations in a broadband CW dye laser, 10:39749 (J;NL)
LASER SPECTROSCOPY
Installation for investigation of radioactive nuclei properties by laser radiation, 10:39974 (RA;SU;In Russian)
LASER TARGETS
Acceleration
Velocity measurements of laser driven flyers backed by high impedance windows, 10:41044 (R;US)
Hydrodynamics
Hydrodynamics of long-scale-length plasmas. Summary, 10:41028 (R;US)

LASER-PRODUCED PLASMA
Energy Absorption
Experimental results and theoretical analysis of the effect of wavelength on absorption and hot-electron generation in laser-plasma interaction, 10:41002 (J;US)
Ion Sources
Potentialities of a plasma produced by CO_2-laser being a multicharged ion source, 10:39840 (R;SU;In Russian)
Multicharged Ions
Formation of ion charge spectra of laser plasma of gas targets, 10:39842 (R;SU;In Russian)
Nonlinear Optics
Evidence in the second-harmonic emission for self-focusing of a laser pulse in a plasma, 10:41001 (J;US)
Photon Emission
Evidence in the second-harmonic emission for self-focusing of a laser pulse in a plasma, 10:41001 (J;US)
Plasma Diagnostics
Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy, 10:40994 (J;US)
Plasma Instability
Weibel instability in the spherical corona of a laser fusion target, 10:40997 (J;US)
Streak Photography
Improved approach to characterizing and presenting streak camera performance, 10:40990 (R;US)
X-Ray Spectra
High energy x-ray diagnostics of short lived plasmas, 10:40974 (R;US)
LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
SEMICONDUCTOR LASERS
SOLID STATE LASERS
Electrical Properties
Instabilities and chaotic behavior of active and passive laser systems. Final report, 1 December 1981-6 December 1984, 10:39744 (R;US)
Energy-Level Transitions
Far-wing (N+1)-photon transition formula for variable bandshape laser, 10:39748 (BA;US)
Photons
Far-wing (N+1)-photon transition formula for variable bandshape laser, 10:39748 (BA;US)
Pulse Generators
Vulcan pulse generating system, 10:39745 (R;GB)
Stability
Instabilities and chaotic behavior of active and passive laser systems. Final report, 1 December 1981-6 December 1984, 10:39744 (R;US)
Uses
Science, technology, and the industrialization of laser-driven processes, 10:38835 (R;US)
LATE RADIATION EFFECTS
See DELAYED RADIATION EFFECTS
LATTICE FIELD THEORY
Monte Carlo Method
Monte Carlo study of a 1+1 dimensional N=2 Wess-Zumino model on the lattice in the local Hamiltonian method, 10:40636 (R;DD)
LATTICES (CRYSTAL)
See CRYSTAL LATTICES
LEAD
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Alpha Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Biochemistry
Biogeochemical cycling and distribution of lead in a pine-oak forest in New Jersey, 10:40156 (R;US)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Biological Localization
Use of radioautography to study lead localization in plants, 10:40311 (RA;CA)
Deuteron Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Fragmentation
Surface properties of shocked lead, 10:39564 (R;US)
Helium 3 Reactions
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Impact Shock
Surface properties of shocked lead, 10:39564 (R;US)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Neutron Transport
Passage of 14 MeV neutrons through lead, 10:40869 (RA;CS;In Czech)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Pion Minus Reactions
Compton effect on πp meson, 10:40519 (R;SU;In Russian)
Proton Reactions
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Radiation Transport
Exposure, dose-equivalent and absorbed-dose buildup factors of gamma rays for plane normal and isotropic incidences on water, concrete, iron and lead, 10:40873 (R;JP)
Structure Factors
Contributions to atomic microdynamics study in some liquid metals by means of soft neutrons scattering, 10:39520 (R;RO;In Romanian)
Thickness
Comment on "Transition-temperature oscillations in thin superconducting films", 10:39576 (J;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)
Transition Temperature
Comment on "Transition-temperature oscillations in thin superconducting films", 10:39576 (J;US)
LEAD 204
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
LEAD 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
LEAD 207
Isomer Shift
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
M1-Transitions
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
LEAD 208
Giant Resonance
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)

M1-Transitions
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)
Nuclear Radii
Semiclassical description of hot nuclear systems, 10:40802 (RA;FR)
LEAD 208 TARGET
Oxygen 16 Reactions
Nearside-farside analyses of heavy-ion direct reactions to the continuum, 10:40765 (RA;FR)
Photonuclear Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Pion Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Proton Reactions
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
Sulfur 32 Reactions
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Phase space model of angular distributions in heavy-ion-induced fission, 10:40767 (RA;FR)
LEAD 209
Isomer Shift
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
M1-Transitions
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
LEAD 210
Foliar Uptake
Beryllium-7 deposition to terrestrial vegetation in Tennessee, 10:40137 (R;US)
LEAD BASE ALLOYS
Chemical Composition
Composition profile determination in isomorphous binary alloys, 10:39522 (R;BR;In Portuguese)
Crystal Growth
Pb /sub 1-x/ Sn /sub x/ Te monocrystal growth by vapor phase transport, with formation of a liquid/solid growth interphase, 10:39521 (R;BR;In Portuguese)
LEAD ISOTOPES
See also LEAD 204
LEAD 205
LEAD 207
LEAD 208
LEAD 209
LEAD 210
Photonuclear Reactions
Measurement of photonuclear cross sections from 30 to 140 MeV for intermediate and heavy mass nuclei (Sn, Ce, Ta, Pb and U), 10:40769 (R;FR;In French)
LEAD METHOD
See ISOTOPE DATING
LEAD ZIRCONITE TITANATE
See PZT
LEED
See ELECTRON DIFFRACTION
LEGUMINOSAE
Nitrogen Fixation
Isotopic techniques in quantitative determinations of biologically fixed nitrogen, 10:40258 (RA;MX;In Spanish)
LEMONIZ-1 REACTOR
Lemoniz, Vizcaya, Spain
Reactor Licensing
Royal Decree-Law 12/1982 of 27 August regulating State intervention in the Lemoniz nuclear power plant, 10:39128 (R;XA;In Spanish)
LEMONIZ-2 REACTOR
Lemoniz, Vizcaya, Spain
Reactor Licensing
Royal Decree-Law 12/1982 of 27 August regulating State intervention in the Lemoniz nuclear power plant, 10:39128 (R;XA;In Spanish)
LENSES
Computer-Aided Design
Attempt to develop an "intelligent" lens design program, 10:41087 (R;US)
Design
Nearly ideal lens optimization procedure, 10:39727 (R;US)
Optimization
Nearly ideal lens optimization procedure, 10:39727 (R;US)
LEP STORAGE RINGS
European Large Electron-Positron storage rings.
Beam Injection
Phase setting of radiofrequency fields in LEP injector linear accelerators, 10:39863 (R;FR;In French)
Modifications
Hard hadronic collisions - extrapolation of standard effects, 10:40554 (RA;XC)
LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LEPTONS
See also ELECTRONS
NEUTRINOS
Particle Production
Status of perturbative QCD, 10:40642 (BA;GB)
Spin
New weak boson decays and possible spin 3/2 leptons, 10:40558 (R;FR)
LEVEL DENSITY
See ENERGY LEVELS
LEVEL INDICATORS
Accuracy
Discrete liquid helium level indicator, 10:39721 (R;SU;In Russian)
Design
Development of a pressurizer level compensator for use on N Reactor, 10:39130 (R;US)
LEVEL SCHEMES
See ENERGY LEVELS
LIBERIA
Wood-Fuel Power Plants
Analysis of the costs of fuel supply for wood-fired electric power plants in rural Liberia, 10:39409 (R;US)
LICENSE APPLICATIONS
Recommendations
Guide for the preparation of applications for licenses for the use of radioactive materials in servicing preregistered gauges, measuring devices, and sealed sources used in such devices. Draft, 10:40046 (R;US)
LI-DRIFTED GE DETECTORS
Calibration
Efficiency calibration of HPGe and Ge(Li) detectors for large-volume samples, 10:39944 (RA;CS;In Czech)
Gamma spectrometry determination of radionuclides in water samples from the environs of nuclear power plants, 10:40195 (RA;CS;In Slovak)
Charge Collection
Charge collection time effecting energy and time resolution of semiconductor detectors, 10:39997 (R;SU;In Russian)
Efficiency
Efficiency calibration of HPGe and Ge(Li) detectors for large-volume samples, 10:39944 (RA;CS;In Czech)
Gamma spectrometry determination of radionuclides in water samples from the environs of nuclear power plants, 10:40195 (RA;CS;In Slovak)
Peak efficiency of coaxial Ge(Li) detector for large-volume samples, 10:39966 (RA;CS;In Slovak)
Pulse Amplifiers
Technique and results of spectroscopy amplifiers testing for semiconductor nuclear radiation detectors, 10:39989 (R;SU;In Russian)
Pulse Rise Time
Charge collection time effecting energy and time resolution of semiconductor detectors, 10:39997 (R;SU;In Russian)

Uses
Double beta decay research with a Ge(Li) detector, 10:40013 (RA;SU)
Practical aspects of use of Ge-based detectors in analysis of large-volume samples, 10:39948 (RA;CS;In Czech)

LI-DRIFTED SI DETECTORS
Design
Si(Li)-NaI(Tl) sandwich detector array for measurements of trace radionuclides in soil samples, 10:39890 (R;US)
Sensitivity
Si(Li)-NaI(Tl) sandwich detector array for measurements of trace radionuclides in soil samples, 10:39890 (R;US)

LIGANDS
Synthesis
Porous sorbents and membrane supported specific actinide chelators and solvent extractants (H-octadentate catecholamide), 10:39679 (R;US)

LIGHT NUCLEI
For nuclei with mass 1-40.

Alpha Reactions
Direct and exchange processes in alpha reactions on light nuclei, 10:40685 (RA;SU;In Russian)
Angular Momentum
Fission of light nuclei with high angular momentum, 10:40798 (RA;FR)
Coulomb Energy
Isobaric mass equation for A=1-45 and systematics of Coulomb displacement energies, 10:40647 (R;FR)
Fission
Fission of light nuclei with high angular momentum, 10:40798 (RA;FR)
Isospin
Isobaric mass equation for A=1-45 and systematics of Coulomb displacement energies, 10:40647 (R;FR)
Mass Formulae
Isobaric mass equation for A=1-45 and systematics of Coulomb displacement energies, 10:40647 (R;FR)

LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS

LIGHTING SYSTEMS
Emergency Plans
Movement under emergency lighting. 1. The effect of illuminance, 10:39450 (R;GB)

LIGNITE
Activation Energy
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
Ashes
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)
Biodegradation
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)
Biological Adaptation
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)
Solvent Extraction
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)
Structural Chemical Analysis
Microbial screening test for lignite degradation. Quarterly progress report No. 2, April-June 1985, 10:38719 (R;US)

LIMERICK-1 REACTOR
Limerick, Pennsylvania, USA
Reactor Safety
Safety Evaluation Report related to the operation of Limerick Generating Station, Units 1 and 2 (Docket Nos. 50-352 and 50-353). Supplement No. 5, 10:39350 (R;US)

LIMERICK-2 REACTOR
Limerick, Pennsylvania, USA
Reactor Safety
Safety Evaluation Report related to the operation of Limerick Generating Station, Units 1 and 2 (Docket Nos. 50-352 and 50-353). Supplement No. 5, 10:39350 (R;US)

LIMITERS
Experiment Planning
Progress report on pump limiter developments for the TEXTOR tokamak: ALT-I, 10:41051 (J;US)
Performance
Progress report on pump limiter developments for the TEXTOR tokamak: ALT-I, 10:41051 (J;US)

LINACS
See LINEAR ACCELERATORS

LINDANE
Biological Accumulation
Bound residues of ^{14}C-lindane in rice plants and soil, 10:40246 (RA;XA)
Tracer Techniques
Bound residues of ^{14}C-lindane in rice plants and soil, 10:40246 (RA;XA)

LINEAR ACCELERATORS
See also LAMPF LINAC
STANFORD LINEAR COLLIDER
Beam Dynamics
Accuracy of smooth approximation at calculating coulomb field effecting beam dynamics in a strong-focusing accelerator, 10:39811 (R;SU;In Russian)
Synthesis of MBE-4 accelerating waveforms, 10:39819 (R;US)
Beam Profiles
Two-dimensional linacs, 10:39817 (R;US)
Beam Transport
RADLAC II lead pulse stability, 10:39825 (R;US)
Electron Beams
Investigation of the SILUND-20 electron linear induction accelerator beam, 10:39814 (R;SU;In Russian)
Simple water calorimeter for measuring absorbed dose in irradiation using Tesla-4 MeV linear electron accelerator, 10:39920 (RA;CS;In Czech)
Kilo Amp Beam Currents
RADLAC II lead pulse stability, 10:39825 (R;US)
Neutron Spectrometers
Report on the recent activities of neutron experiments at KURRI-Linac, 10:39985 (RA;JP;In Japanese)
Phase Stability
Investigation of the SILUND-20 electron linear induction accelerator beam, 10:39814 (R;SU;In Russian)
Positron Beams
Intense positron beams: linacs, 10:39830 (BA;US)
RF Systems
Versatile rf controller, 10:39868 (R;US)

LINEAR PROGRAMMING
L Codes
Performance of various computers using standard linear equations software in a Fortran environment, 10:41077 (R;US)
Newton Method
Projected Newton barrier methods for linear programming and an equivalence to Karmarkar's projective method, 10:41092 (R;US)

LINEAR Z PINCH DEVICES
Plasma Diagnostics
Technique for in situ calibration of an x-ray streak camera in the nanosecond regime using a high density Z-pinch, 10:40991 (J;US)

LIQUEFIED NATURAL GAS
Safety
Dispersal of LNG (liquefied natural gas) vapor clouds with water spray curtains. Phase 2: wind tunnel and small-scale

spill tests. Appendix C. Model study of liquefied natural gas vapor cloud dispersion with water-spray curtains. Final report, December 1981-November 1983, 10:38801 (R;US)

Vapors

Dispersal of LNG (liquefied natural gas) vapor clouds with water spray curtains. Phase 2: wind tunnel and small-scale spill tests. Appendix C. Model study of liquefied natural gas vapor cloud dispersion with water-spray curtains. Final report, December 1981-November 1983, 10:38801 (R;US)

LIQUEFIED PETROLEUM GASES

Data Compilation

Petroleum Supply Monthly, May 1985, 10:38794 (R;US)

LIQUEFIERS

See CONDENSERS

LIQUID ASPHALT

See PETROLEUM RESIDUES

LIQUID CRYSTALS

Electrical Properties

Magnetic, electric and optic properties of liquid crystals, 10:39612 (R;RO;In Romanian)

Magnetic Properties

Magnetic, electric and optic properties of liquid crystals, 10:39612 (R;RO;In Romanian)

Neutron Transport

Thermal neutron scattering in MBBA and EBBA solid phases, 10:40877 (R;SU;In Russian)

Optical Properties

Magnetic, electric and optic properties of liquid crystals, 10:39612 (R;RO;In Romanian)

Physical Properties

Thermal neutron scattering in MBBA and EBBA solid phases, 10:40877 (R;SU;In Russian)

LIQUID EFFLUENTS

See LIQUID WASTES

LIQUID IONIZATION CHAMBERS

Time Resolution

Time resolution of the liquid argon detectors. Part 2. Physically realizable filters, 10:39910 (R;SU;In Russian)

LIQUID METAL COOLED REACTORS

See also LMFBR TYPE REACTORS

Reactor Accidents

CONACS: the DOE safety analysis system, 10:39307 (R;US)

LIQUID METAL TEST FACILITIES

See TEST FACILITIES

LIQUID SCINTILLATION DETECTORS

Calorimeters

Scintillation yields by relativistic heavy ions and the relation between ionization and scintillation in liquid argon, 10:40050 (J;NL)

Cherenkov Counting

Cerenkov counting, 10:39960 (RA;MX;In Spanish)

Instability

Instability of liquid scintillation measurement due to labelled compound sorption, 10:39951 (RA;CS;In Slovak)

Uses

Possible uses of liquid scintillation detector in radionuclide metrology, 10:39949 (RA;CS;In Czech)

LIQUID SCINTILLATORS

Efficiency

Optimization of aqueous sample composition for measurement with liquid scintillator detectors, 10:40064 (RA;CS;In Czech)

LIQUID WASTES

See also WASTE WATER

Environmental Impacts

Hydrophysical interactions of organic chemicals with geological materials. Research highlights subsurface transport program, 10:40160 (R;US)

LIQUIDS

See also COAL LIQUIDS
LIQUID CRYSTALS

Computerized Simulation

Fragmentation of suddenly heated liquids, 10:40491 (J;US)

Fragmentation

Fragmentation of suddenly heated liquids, 10:40491 (J;US)

LITHIUM

Diffusion

In-plane jump diffusion of Li in LiC_6, 10:39636 (J;US)

Leaching

Parametric testing of a DWPF glass, 10:38934 (R;US)

LITHIUM 6

Energy Levels

Excitation of respiratory resonances in scattering of s-shell nuclei on alpha particle, 10:40680 (RA;SU;In Russian)

Excitation of low-lying states of light nuclei in the (e,e'), (π,π') and (γ,π) reactions, 10:40682 (RA;SU;In Russian)

LITHIUM 6 REACTIONS

Breakup Reactions

Analysis of inclusive spectra of particles from the processes of light ion fragmentation on nuclei at intermediate energies, 10:40739 (RA;SU;In Russian)

Elastic Scattering

Application of the hyperspherical function method to analysis of the $^6Li + ^{12}C$ elastic scattering at different energies, 10:40690 (RA;SU;In Russian)

LITHIUM 6 TARGET

Analyzing Power

Microscopic analysis of ^6Li (p, vector p)g.s. and ^6Li (p, vector p') (2.18 MeV) analyzing powers at 25, 35, and 45 MeV, 10:40677 (J;US)

Photonuclear Reactions

Photodisintegration of p-shell light nuclei, 10:40683 (RA;SU;In Russian)

Proton Reactions

$^6Li(p,\alpha)^3He$ reaction at 47,8-62,5 MeV energies, 10:40697 (RA;SU;In Russian)

Measurement and analysis of the angular correlation in the reaction (p,2p) on ^6Li at the 47 and 70 MeV incident protons, 10:40696 (RA;SU;In Russian)

Microscopic analysis of ^6Li (p, vector p)g.s. and ^6Li (p, vector p') (2.18 MeV) analyzing powers at 25, 35, and 45 MeV, 10:40677 (J;US)

LITHIUM 7 TARGET

Photonuclear Reactions

Photodisintegration of p-shell light nuclei, 10:40683 (RA;SU;In Russian)

LITHIUM 8

Beta Decay

Measurement of the energy dependent beta asymmetry in the decay of ^8Li, 10:40679 (R;US)

LITHIUM CARBIDES

Atom Transport

In-plane jump diffusion of Li in LiC_6, 10:39636 (J;US)

LITHIUM CHLORIDES

Electronic Structure

MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)

MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)

F Centers

MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)

Lattice Parameters

MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)

LITHIUM COMPOUNDS

See also LITHIUM CARBIDES
LITHIUM OXIDES

Electro-Optical Effects

Circuit effect in$LiNbO_3$ channel-waveguide modulators, 10:40945 (J;US)

Superconductivity

Josephson effect in the unusual superconductors $Lu_2Fe_3Si_5$, $LiTi_2O_4$, and UBe_{13}, 10:40931 (R;US)

LITHIUM FLUORIDES

Electronic Structure

MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)

MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)

F Centers

MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)

Lattice Parameters
MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)
Refractivity
Laser interferometer measurements of refractive index in shock-compressed materials, 10:39622 (R;US)
LITHIUM IONS
Energy Losses
Projectile charge dependence of heavy ion stopping, 10:40863 (R;GB)
LITHIUM OXIDES
Crystallization
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Refractivity
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Thermal Expansion
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Tritium Recovery
In-pile test of tritium recovery from lithium oxide. Tritium release behavior, 10:41038 (R;JP;In Japanese)
LIVER
Iron
Nuclear resonance scattering measurement of human iron stores, 10:40231 (J;US)
Nuclear Magnetic Resonance
Nuclear resonance scattering measurement of human iron stores, 10:40231 (J;US)
Radionuclide Kinetics
In vivo measurements of /sup 243,244/Cm retention in the adult baboon, 10:40269 (RA;US)
Metabolic studies of ^{241}Am in man: continued follow-up of a non-occupational contamination of a child and his father, 10:40270 (RA;US)
LMFBR TYPE REACTORS

SNR REACTOR
SUPER PHENIX REACTOR
Containment Buildings
Parameter studies to determine sensitivity of slug impact loads to properties of core surrounding structures, 10:39250 (R;US)
Fluid Flow
Fluid forces on two circular cylinders in crossflow, 10:39145 (R;US)
Materials
Overview of the research programmes of the Commission of the European Communities Joint Research Centre in the field of LMFBR materials properties, 10:39529 (RA;XA)
Overview of U.S. LMFBR structural materials mechanical properties program, 10:39531 (RA;XA)
Meltdown
SOCON: a computer model for analyzing the behavior of sodium-concrete reactions, 10:39309 (R;US)
Pipes
Implicit finite element structural dynamic formulation for long-duration accidents in reactor piping systems, 10:39146 (R;US)
Reactor Accidents
Effect of pipe insulation losses on a loss-of-heat sink accident for an LMR, 10:39246 (R;US)
Reactor Core Disruption
Parameter studies to determine sensitivity of slug impact loads to properties of core surrounding structures, 10:39250 (R;US)
Reactor Cores
Option for the Brazilian nuclear project: necessity of fast breeder reactors and core design for an experimental fast reactor, 10:39152 (RA;BR;In Portuguese)
Reactor Safety
German offsite accident consequence model for nuclear facilities: further development and application, 10:39299 (RA;US)
Physics of reactor safety. Quarterly report, January-March 1985. Volume 1, 10:39359 (R;US)
Reactor Vessels
Some safety considerations in the selection of redans for pool-type LMR plants, 10:39253 (R;US)
Specifications
Option for the Brazilian nuclear project: necessity of fast breeder reactors and core design for an experimental fast reactor, 10:39152 (RA;BR;In Portuguese)
Steam Lines
Implicit finite element structural dynamic formulation for long-duration accidents in reactor piping systems, 10:39146 (R;US)
LNG
See LIQUEFIED NATURAL GAS
LOAD MANAGEMENT
Control Systems
Survey of commercial sector demand-side management activities. Final report, 10:39440 (R;US)
LOCA
See LOSS OF COOLANT
LOCAL GOVERNMENT
Meetings
[Integrated Energy Systems Forum monthly meetings]. Final report, 10:39467 (R;US)
LOCKS (SECURITY)
See PHYSICAL PROTECTION DEVICES
LOFT REACTOR
Kaiser Engineers Railroad Tractive Effort Test, LOFT - A and M track, 10:39219 (R;US)
Blowdown
Analysis of the Control Rod Cluster Assembly for combined subcooled blowdown and scram loading, 10:39260 (R;US)
Condensation Chambers
Stress analysis of LOFT condensate receiver seismic restraint, 10:39272 (R;US)
Containment Shells
Analysis of LOFT containment nozzles 11A, 11B, 11D, 12A, 13B, 13C, and 13D by Bijlaard method, 10:39283 (R;US)
Containment Spray Systems
LOFT blowdown suppression spray system response time, 10:39213 (R;US)
Control Elements
Analysis of the Control Rod Cluster Assembly for combined subcooled blowdown and scram loading, 10:39260 (R;US)
Control Rod Drives
CRDM reliability study (Control Rod Drive Monitors (CRDM)), 10:39279 (R;US)
Control Systems
LOFT Vital MG Set transient parameter review, 10:39218 (R;US)
Displacement Gages
Displacement measurement sensor for use in Loss-of-Fluid-Test reactor, 10:39305 (R;US)
ECCS
LOFT lower ECC line missile shield and restraint, 10:39267 (R;US)
Engineered Safety Systems
LOFT engineered safety feature seismic analysis review, 10:39258 (R;US)
Loss of Coolant
LOFT monthly progress report for February 1979, 10:39310 (R;US)
Use of process computer graphics during LOFT loss-of-coolant experiments, 10:39287 (R;US)
Pipes
Blowdown system vents and drains stress analysis, 10:39265 (R;US)
LOFT Blowdown Reflood Assist Bypass Piping Weld elastic stress analysis, 10:39266 (R;US)
LOFT CIS analysis 8"-IW-177-AB inside penetration S-2A, 10:39276 (R;US)
LOFT CIS analysis 1/2"-PCS-1-VA outside penetration S-5D, 10:39268 (R;US)
LOFT CIS analysis penetration S-13D 24" H and V duct, 10:39274 (R;US)
LOFT CIS analysis 1/2 in.-PCS-11-VA outside penetration S-5B, 10:39214 (R;US)
LOFT lower ECC line missile shield and restraint, 10:39267 (R;US)

Structural analysis of 3"-PR-94-E from nozzle S-1A to the pressure reduction and decontamination solution sump, 10:39273 (R;US)
Pressure Vessels
Thermal analysis of LOFT containment vessel penetrations S-5E and S-6A, 10:39217 (R;US)
Primary Coolant Circuits
Auxiliary feedwater requirements, 10:39271 (R;US)
LOFT Blowdown Reflood Assist Bypass Piping Weld elastic stress analysis, 10:39266 (R;US)
LOFT DTT rake assembly design fluid loads. Supplement 1, 10:39277 (R;US)
Pumps
LOFT steam generator simulator and pump simulator performance during LOFT isothermal test Series L1, 10:39212 (R;US)
Reactor Cores
Baseline data for LOFT Level I core requalification, 10:39262 (R;US)
Faulted stress analysis of the LOFT Lower Core Support Plate, 10:39278 (R;US)
Steady state power range flow map analysis, 10:39261 (R;US)
Reactor Instrumentation
Compensation techniques for improving pressure sensors accuracy during LOFT LOCA transient, 10:39304 (R;US)
Reactor Kinetics
Baseline data for LOFT Level I core requalification, 10:39262 (R;US)
Relief Valves
High pressure relief valve quenching. Supplement 1, 10:39232 (R;US)
LOFT pressurizer pressure relief piping system stress analysis and fatigue life report, 10:39282 (R;US)
LOFT technical specifications regarding relief valves testing, 10:39259 (R;US)
Research Programs
LOFT monthly progress report for September 1979, 10:39222 (R;US)
Secondary Coolant Circuits
Secondary coolant main feedwater pump. Appendix H, 10:39270 (R;US)
Secondary coolant system condensate receiver calculations. Appendix I, 10:39215 (R;US)
Seismic Effects
Reactor coolant pumps generator and flywheel seismic analysis, 10:39284 (R;US)
Shielding
Dynamic response of blowdown suppression tank shielding structure. Supplement 1, 10:39263 (R;US)
LOFT shield tank steady state temperatures with addition of gamma and neutron shielding. Supplement 1, 10:39275 (R;US)
Steam Generators
Flow-induced vibration study in the LOFT steam generator, 10:39280 (R;US)
LOFT steam generator simulator and pump simulator performance during LOFT isothermal test Series L1, 10:39212 (R;US)
Steam generator specification design transients, 10:39281 (R;US)
Steam Lines
LOFT feed and steam lines isolation snubbers support structure. Supplement A, 10:39269 (R;US)
Support Pillars
Seismic stress analysis for the LOFT Blowdown ion exchanger relocation support platform, 10:39264 (R;US)
Tanks
Design calculations for Sump Sampling System, 10:39216 (R;US)
Transients
Compensation techniques for improving pressure sensors accuracy during LOFT LOCA transient, 10:39304 (R;US)
LOFT Vital MG Set transient parameter review, 10:39218 (R;US)
Vents
Blowdown system vents and drains stress analysis, 10:39265 (R;US)

LOGIC CIRCUITS
Data Processing
LO-1 and LO-2 - universal units for logical processing discrete nanosecond signals, 10:39775 (RA;SU;In Russian)
LONG VALLEY
Electromagnetic Surveys
Electrical and electromagnetic techniques: electromagnetic soundings in the Long Valley caldera, California, 10:40374 (RA;US)
Magnetotelluric Surveys
Electrical and electromagnetic techniques: electromagnetic soundings in the Long Valley caldera, California, 10:40374 (RA;US)
Microearthquakes
Detailed microearthquake studies at Long Valley caldera, California, 10:40370 (RA;US)
LONG WAVE RADIATION
Radiation Hazards
Biological and human health effects of extremely low-frequency electromagnetic fields. Post-1977 literature review. Final report 1977-1984, 10:40316 (R;US)
LONGITUDINAL PINCH
Energy Losses
Equilibrium states of radiative Z-pinch, 10:40971 (R;SU;In Russian)
LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
LORENTZ TRANSFORMATIONS
Banach Space
Approximately Lorentz transformations and p-adic fields, 10:40954 (R;US)
LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC
LOSS OF COOLANT
Computer Graphics
Use of process computer graphics during LOFT loss-of-coolant experiments, 10:39287 (R;US)
Hydrogen Production
Hydrogen generation and the General Electric Boiling Water Reactor, 10:39348 (R;US)
Mixing
Thermal and fluid mixing in a 1/2-scale test facility. Volume 2. Data report. Final report, 10:39291 (R;US)
Probabilistic Estimation
Probability of pipe failure in the reactor coolant loops of Babcock and Wilcox PWR plants. Volume 2. Guillotine break indirectly induced by earthquakes, 10:39361 (R;US)
Reactor Safety Experiments
Recirculation pump suction line 2.8% break integral test at ROSA-III with HPCS failure, RUN 984, 10:39343 (R;JP)
Research Programs
LOFT monthly progress report for February 1979, 10:39310 (R;US)
Thermal Stresses
CANSWEL-2: a computer model of the creep deformation of Zircaloy cladding under loss-of-coolant accident conditions, 10:39347 (R;GB)
LOSS OF FLUID TEST REACTOR
See LOFT REACTOR
LOST CIRCULATION
Research Programs
Lost circulation in geothermal wells: Research and Development status, 10:39051 (BA;US)
Test Facilities
A full-scale facility for evaluation of lost circulation materials and techniques, 10:39050 (BA;US)
LOVIISA-1 REACTOR
Loviisa, Finland
Alarm Systems
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)
Control Rooms
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)

Reactor Safety
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)
LOVIISA-2 REACTOR
Loviisa, Finland
Alarm Systems
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)
Control Rooms
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)
Reactor Safety
Reduction of alarm messages in nuclear power plant control room, 10:39318 (RA;HU)
LOW ENERGY ELECTRON DIFFRACTION
See ELECTRON DIFFRACTION
LOW FREQUENCY RADIATION
See LONG WAVE RADIATION
LOW LEVEL COUNTING
Plastic Scintillation Detectors
Problems of detectable activities and rational measurement time, 10:39913 (RA;CS;In Slovak)
LOW-LEVEL RADIOACTIVE WASTES
Radioactive Waste Disposal
Disposal facilities on land for low and intermediate-level radioactive wastes: draft principles for the protection of the human environment, 10:38896 (R;GB)
In situ gaseous tracer diffusion experiments and predictive modeling at the Greater Confinement Disposal Test, 10:38878 (R;US)
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)
Ratio methods for cost-effective field sampling of commercial radioactive low-level wastes, 10:38915 (R;US)
Waste disposal by hydrofracture and application of the technology to the management of hazardous wastes, 10:38873 (R;US)
Radioactive Waste Storage
Savannah River Interim Waste Management Program Plan, FY 1985, 10:38879 (R;US)
Sampling
Ratio methods for cost-effective field sampling of commercial radioactive low-level wastes, 10:38915 (R;US)
Underground Disposal
Demonstration of an initial screening phase for site selection for low level radioactive waste burial - an evaluation of relevant IAEA guidelines, 10:38864 (R;AU)
LP-GAS
See LIQUEFIED PETROLEUM GASES
LUMINESCENT DOSEMETERS
See also THERMOLUMINESCENT DOSEMETERS
Performance
Effective energies and exposure determinations of two different energy X-ray beams incident on a personnel monitor, 10:40057 (RA;BR)
LUNGS
Acute Irradiation
Radionuclide injury to the lung, 10:40301 (J;US)
Autoradiography
Measurement of nonhomogeneity of curium alpha irradiation in soft tissues of the baboon, 10:40273 (RA;US)
Injuries
Role of toxicological interactions in lung injury, 10:40315 (J;US)
Radiation Doses
Fast neutron depth dose distributions in a heterogeneous phantom, 10:40276 (R;US)
Radiation Injuries
Radionuclide injury to the lung, 10:40301 (J;US)
Radionuclide Kinetics
Metabolic studies of ^{241}Am in man: continued follow-up of a non-occupational contamination of a child and his father, 10:40270 (RA;US)
Scintiscanning
Application of an information-theoretic method for efficacy assessment, 10:40230 (J;US)
Determination of clinical efficacy: nuclear medicine as applied to lung scanning, 10:40229 (J;US)
LUTETIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Fermi Level
Effect of pressure on the bandstructure and superconductivity in lutetium, 10:39509 (R;XA)
Superconductivity
Effect of pressure on the bandstructure and superconductivity in lutetium, 10:39509 (R;XA)
Transition Temperature
Effect of pressure on the bandstructure and superconductivity in lutetium, 10:39509 (R;XA)
LUTETIUM 171
Beta-Plus Decay
Excitation of the 5/2$^-$[523] band levels in the ^{171}Lu → ^{171}Yb decay, 10:40760 (RA;SU;In Russian)
LUTETIUM 176
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
LWBR TYPE REACTORS
Spent Fuel Elements
Aiming toward perfection with POBSYS, a new software system (Destructive analysis of LWBR irradiated fuel rods), 10:39147 (R;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYOLUMINESCENCE
Uses
Practical applications of lyoluminescence, 10:40284 (RA;CS;In Czech)

M

MA 754
See NICKEL BASE ALLOYS
MA 956
See IRON BASE ALLOYS
MAGELLANIC CLOUDS
Star Clusters
Comparisons between observational color-magnitude diagrams and synthetic cluster diagrams for young star clusters in the Magellanic Clouds, 10:40426 (BA;NL)
MAGNESIUM
Alpha Reactions
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
Physical Radiation Effects
Influence of irradiation defects on anelastic properties of magnesium, 10:39483 (R;FR)
MAGNESIUM 24 TARGET
Neon 20 Reactions
Evaluation of non statistical effects in ^{20}Ne + ^{24}Mg reactions below 10 MeV/A, 10:40700 (RA;FR)
Oxygen 16 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Sulfur 32 Reactions
Quasi-symmetric two-body fragmentation of the ^{32}S + ^{12}C and ^{32}S + ^{24}Mg composite systems, 10:40702 (RA;FR)
MAGNESIUM 26 TARGET
Proton Reactions
Spin-flip (p,n) reactions on ^{26}Mg, ^{54}Fe, and ^{56}Fe at selected proton bombarding energies in the range of 17 to 25 MeV, 10:40708 (R;US)
MAGNESIUM ALLOYS
Impact Tests
Stress and strain-rate dependence of spall strength in two aluminum alloys, 10:39557 (R;US)

MAGNET POLE PIECES
Design
Design for a high field combined function superferric magnet, 10:39788 (R;US)
MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION
MAGNETIC FIELDS
Biological Effects
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields, 10:40318 (R;US)
Flux Density
Magnetic field applications in modern technology and medicine, 10:40319 (R;US)
MAGNETIC MIRROR CONFIGURATIONS
Stabilization
MHD stabilization of high β mirror plasma partially enclosed by conducting wall, 10:40963 (R;US)
MAGNETIC MIRRORS
Including systems with minimum-B configuration.
See also MFTF DEVICES
TANDEM MIRRORS
ICR Heating
Theoretical study of ICRF effects on multiple-mirror confinement, 10:41011 (J;AT)
Ion Rings
Proton ring trapping in a gated magnetic mirror, 10:40992 (J;US)
Plasma Confinement
Proton ring trapping in a gated magnetic mirror, 10:40992 (J;US)
Theoretical study of ICRF effects on multiple-mirror confinement, 10:41011 (J;AT)
Trapping
Proton ring trapping in a gated magnetic mirror, 10:40992 (J;US)
MAGNETIC MONOPOLES
Bound State
Monopole-fermion and dyon-fermion bound states. Pt. 5, 10:40561 (R;DE)
Conservation Laws
Conservation of basic monopoles in decay processes, 10:40586 (R;NO)
Energy Levels
Calculation of energy levels in a system of two magnetic monopoles by semiclassic theory, 10:40584 (R;NO)
Particle Production
Experiments on the search for magnetic monopoles, 10:40515 (R;SU;In Russian)
MAGNETIC SPECTROMETERS
CAMAC System
Trial operation of the MPK automatic system with the magnetic spectrometer at the Erevan synchrotron, 10:39893 (R;SU;In Russian)
Cherenkov Counters
Multichannel threshold gas Cherenkov counter placed in the spectrometric magnetic of the BIS-2 facility, 10:39992 (R;SU;In Russian)
Position Sensitive Detectors
Magnetic spectrometers with position-sensitive detectors in the source plane, 10:39969 (RA;SU;In Russian)
MAGNETOHYDRODYNAMIC CHANNELS
See MHD CHANNELS
MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS
MAGNETOHYDRODYNAMICS
Algorithms
Implicit algorithm for compressible three-dimensional magnetohydrodynamic calculations, 10:41006 (J;US)
Boundary Layers
Asymptotic expansions of solutions of an nth order linear differential equation with power coefficients, 10:40953 (R;FR)
Research Programs
Report to Congress on emerging clean coal technologies, 10:38768 (R;US)
MAGNETOMETERS
See also PROTON PRECESSION MAGNETOMETERS
Hall Effect
Magnetometer for the magnet measurement complex at the JINR phasotron, 10:40081 (R;SU;In Russian)
MAGNETOSPHERE
See EARTH MAGNETOSPHERE
MAGNETOTAIL
Boundary Layers
Boundary layers as the primary transport regions of the earth's magnetotail. Scientific report 1977-1979, 10:40429 (R;US)
Plasma
North-south and dawn-dusk plasma asymmetries in the distant tail lobes: ISEE 3, 10:40431 (J;US)
Plasma Sheet
Boundary layers as the primary transport regions of the earth's magnetotail. Scientific report 1977-1979, 10:40429 (R;US)
MAGNOX TYPE REACTORS
Radioactive Wastes
Equilibrium leach testing of Magnox fuel cladding residues, 10:38868 (R;GB)
MAINE
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
MAIZE
Fermentation
Agitation and pressure effects on acetone-butanol fermentation (Clostridium acetobutylicum), 10:38987 (J;US)
Proteins
Corn storage protein: a molecular genetic model. Final report, 10:40203 (R;US)
Radionuclide Kinetics
Nuclear radiation detection by autoradiography, 10:40286 (RA;MX;In Spanish)
MALATHION
Biodegradation
Studies on bound residues of ^{14}C-malathion in soil, 10:40164 (RA;XA)
MALIGNANCIES
See NEOPLASMS
MAN
All of mankind, of any age or of either sex.
Biological Radiation Effects
Ionizing radiation effects, 10:40285 (RA;MX;In Spanish)
MANGANESE
Activation Analysis
Isotope-source neutron-activation analysis for the determination of manganese in bulk samples, 10:39673 (R;ZA)
Neutron activation determination of low manganese concentrations in standard biological materials, 10:39653 (RA;CS;In Czech)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)
MANGANESE 53
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
MANGANESE ADDITIONS
See also STAINLESS STEEL-Z6CND17-12
Muon Probes
Muon spin relaxation study of exchange coupling in dilute AgMn alloys, 10:40460 (R;US)
Spin Exchange
Muon spin relaxation study of exchange coupling in dilute AgMn alloys, 10:40460 (R;US)

MANGANESE CHLORIDES
Solitons
Narrow and broad solitons in the antiferromagnetic chains of $CsCoCl_3$ and TMMC, 10:39606 (R;FR)
MANIPULATORS
Manipulators for radioactive material, 10:39723 (RA;MX;In Spanish)
Mechanical accessories for mobile teleoperators, 10:38842 (R;US)
MAN-MACHINE SYSTEMS
Communications
Human-machine interface in mobile teleoperators, 10:39717 (R;US)
Human Factors Engineering
Human-machine interface in mobile teleoperators, 10:39717 (R;US)
MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS
MANY-BODY PROBLEM
Boltzmann-Vlasov Equation
Approximation scheme for the quantum Liouville equation using phase-space distribution functions, 10:40947 (J;US)
MAPS
Dimensions
Renormalization, unstable manifolds, and the fractal structure of mode locking, 10:40955 (J;US)
Mode Locking
Renormalization, unstable manifolds, and the fractal structure of mode locking, 10:40955 (J;US)
MARINE DISPOSAL
Radionuclide Migration
Lagrangian current measurements and large-scale long-term dispersion rates (Sofar float experiment), 10:38941 (R;XE)
MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS
MARKET
Forecasting
Current assessment and future potential of the international nuclear market, 10:39389 (R;BE)
MARKET SHARES
See MARKET
MARS PLANET
Cosmic Radiation
Use of chemical explosives for emergency solar flare shelter construction and other excavations on the Martian surface, 10:40412 (R;US)
MARYLAND
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
Thermal Power Plants
Bibliography of the Maryland Power Plant Siting Program. Sixth edition, 10:39103 (R;US)
MASERS
Microwave Amplification by Stimulated Emission of Radiation.
Superconducting-cavity-stabilized ruby maser oscillator, 10:39768 (R;US)
MASKS

MECHANICAL PROPERTIES
Microstructure
Mechanical interactions of rough surfaces. Quarterly progress report, April 1, 1985-June 30, 1985, 10:39761 (R;US)
Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)

MECHANICAL STRUCTURES
See also SUPPORTS
Computer Codes
ABAQUS-EPGEN: a general-purpose finite-element code. Volume 4. Systems manual, 10:41083 (R;US)

MEETINGS
Proceedings of the 4. Japan - Brazil Symposium on Science and Technology. Vol. 4, 10:41065 (R;BR)

MELANOCYTES
See ANIMAL CELLS

MELTDOWN
Fluid-Structure Interactions
SOCON: a computer model for analyzing the behavior of sodium-concrete reactions, 10:39309 (R;US)
Heat Transfer
Experimental investigations at small spheres for the determination of influences on the heat transfer and the heat destorage times in case of quenching, 10:39311 (R;DE;In German)
Molten Metal-Water Reactions
Corium quench in deep pool mixing experiments, 10:39255 (R;US)

MEMORY DEVICES
Distributed memory. Technical report, 10:41094 (R;US)

MENDELEVIUM 259
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 10:40785 (RA;SU)

MERCURY
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Chemical Analysis
Study by optical and scanning electron microscopy of mercury used by amalgamate zinc powders in alkaline cell production, 10:39373 (R;GB;FR)
Film Flow
Effects of the inhomogeneous current and magnetic field on the flow characteristics of the mercury film of a chlorine alkali electrolysis cell, 10:39758 (R;DE;In German)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Multi-Photon Processes
Four-photon-resonant third-harmonic generation in Hg, 10:40481 (J;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

MERCURY 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)

MERCURY BROMIDES
Emission Spectra
Molecular chemiluminescence from Mercury halides excited in an atmospheric-pressure active-nitrogen afterglow, 10:39747 (J;US)

MERCURY CHLORIDES
Emission Spectra
Molecular chemiluminescence from Mercury halides excited in an atmospheric-pressure active-nitrogen afterglow, 10:39747 (J;US)

MERCURY IODIDES
Emission Spectra
Molecular chemiluminescence from Mercury halides excited in an atmospheric-pressure active-nitrogen afterglow, 10:39747 (J;US)

MESH GENERATION
Algorithms
Conservative rezoning algorithm for generalized two-dimensional meshes, 10:40958 (J;US)

MESON FACTORIES
See also LAMPF LINAC
Accelerator Facilities
Review of proposed kaon factory facilities, 10:39862 (R;US)
Feasibility Studies
K factory project, 10:39790 (RA;DE)
Reviews
Review of proposed kaon factory facilities, 10:39862 (R;US)

MESON SPECTROSCOPY
Reviews
Light quark spectroscopy, 10:40605 (BA;GB)

MESON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

MESONS
Pair Production
Production of meson pairs with large transverse momenta in hadron-nuclear interactions, 10:40591 (R;SU;In Russian)

METAGALAXY
See UNIVERSE

METAL CASTINGS
See CASTINGS

METAL INDUSTRY
Cogeneration
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 2, 10:39457 (R;DE;In German)
Energy Conservation
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 1. Vol. 1 and 2, 10:39455 (R;DE;In German)
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 1 Vol. 1 and 2, 10:39456 (R;DE;In German)
Fuel Substitution
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 1. Vol. 1 and 2, 10:39455 (R;DE;In German)
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 1 Vol. 1 and 2, 10:39456 (R;DE;In German)
Waste Heat Utilization
Reduction of the energy consumption of a metallurgical plant: Increase of the use of domestic energy in connection with power supply enterprises. Pt. 2, 10:39457 (R;DE;In German)
METAL SPRAYING
See SPRAY COATING
METALLIC GLASSES
Extrusion
Hydrostatic extrusion of amorphous $Fe_{83}B_{12}Si_5$ and $U_{70}Cr_{30}$ ($Fe_{83}B_{12}Si_5$; $U_{70}Cr_{30}$), 10:39567 (R;US)
Order Parameters
Dense random packed model for amorphous $Ni_{55}Zr_{45}$: influence of the heat of mixing, 10:39492 (R;US)
METALLOPROTEINS
Liquid Column Chromatography
Copper-binding protein in Mimulus guttatus, 10:40206 (R;US)
METALS
See also ACTINIDES
ALUMINIUM
BISMUTH
CADMIUM
GERMANIUM
LEAD
MERCURY
REFRACTORY METALS
ZINC
Activation Analysis
Isotope-source neutron-activation analysis for the determination of manganese in bulk samples, 10:39673 (R;ZA)
Collective Excitations
Collective multipole excitations in small metal particles: Critical angular momentum l/sup cr/ for the existence of collective surface modes, 10:40922 (J;US)
Corrosion
Marine corrosion. Final report, 10:39479 (R;US)
Effective Mass
Proposed determination of many-body effects in heavy-fermion systems by conduction-electron-spin resonance, 10:39573 (J;US)
Electron Spin Resonance
Proposed determination of many-body effects in heavy-fermion systems by conduction-electron-spin resonance, 10:39573 (J;US)
Electronic Structure
Proposed determination of many-body effects in heavy-fermion systems by conduction-electron-spin resonance, 10:39573 (J;US)
Layers
Metallic multilayers and superlattices, 10:39495 (R;US)
Optical Properties
Collective multipole excitations in small metal particles: Critical angular momentum l/sup cr/ for the existence of collective surface modes, 10:40922 (J;US)
Physical Radiation Effects
CLUST-applied program package for solution of radiation problems in solid-state physics, 10:39505 (R;SU;In Russian)
Resistance Heating
Resistance heating of metals: state-of-the-art assessment. Final report, 10:39499 (R;US)
Seals
In-situ vacuum-assisted molding of glass-metal electrical components, 10:39475 (R;US)
Injection molding-sealing of glass to low melting metals, 10:39476 (R;US)
Spectrophotometry
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
Vacuum Melting
Vacuum melting of metals: state-of-the-art assessment. Final report, 10:39500 (R;US)
X-Ray Emission Analysis
Metallurgical applications of x-ray microanalysis, 10:39512 (RA;CA)
METHANE
Biosynthesis
Effect of feed additives and animal shelter disinfectants on methane fermentation, 10:38983 (R;DE;In German)
Pilot project to investigate the anaerobic digestion of the European water chestnut. Final report, 10:38982 (R;US)
Chemical Reaction Yield
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1984, 10:38980 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, April 1-June 30, 1984, 10:38978 (R;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, July 1-September 30, 1984, 10:38979 (R;US)
Combustion
Behavior of the lean methane-air flame at zero-gravity. Final report, November 1983-December 1984, 10:39712 (R;US)
Ecological Concentration
Carbon dioxide and methane in the atmosphere and surface ocean waters of the Indian Ocean and Antarctic Regions, 10:40126 (RA;US)
Flammability
Behavior of the lean methane-air flame at zero-gravity. Final report, November 1983-December 1984, 10:39712 (R;US)
Production
Methane resource assessment for Hawaii, 10:39416 (R;US)
Recovery
Development and evaluation of technology for methane production from a deep coal seam in the Piceance Basin. Annual report, April 15, 1983-May 31, 1984, 10:38805 (R;US)
Hydrologic characterization of coal seams for methane recovery - Activity 2 topical report: hydrologic constraints and single-phase test procedures. Volume 2. Selected methods for well-test analysis. Final report, March-June 1983, 10:38804 (R;US)
Methane resource assessment for Hawaii, 10:39416 (R;US)
Resource Assessment
Methane resource assessment for Hawaii, 10:39416 (R;US)
Yields
Experimental program for the development of an advanced wet carbonization process. Project 61070 topical Phase I report, August 12, 1983-December 31, 1984, 10:38693 (R;US)
METHANOGENIC BACTERIA
See also CLOSTRIDIUM ACETOBUTYLICUM
Enzyme Inhibitors
Effect of feed additives and animal shelter disinfectants on methane fermentation, 10:38983 (R;DE;In German)
METHANOL
Transport
Transport of methanol by pipeline, 10:38985 (R;US)
METHYL ALCOHOL
See METHANOL

METHYL METHANESULFONATE
Biological Effects
Measurement of unscheduled DNA synthesis in germ cells of the male mouse (Mus musculus), 10:40303 (R;US)
METHYL RADICALS
Electronic Structure
Systematic study of molecular anions within the self-consistent-field approximation: OH^-, CN^-, C_2H^-, NH^-_2, and CH^-_3, 10:40472 (J;US)
METHYL-FUEL
See METHANOL
MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Vacuum Systems
Design and construction of the vacuum vessel for the tandem mirror fusion test facility, 10:41050 (J;US)
MHD CHANNELS
Design
MHD channel component development. Quarterly report, October-December 1984, 10:39419 (R;US)
Materials
MHD channel component development. Quarterly report, October-December 1984, 10:39419 (R;US)
Mathematical Models
MHD channel component development. Quarterly report, October-December 1984, 10:39419 (R;US)
Performance Testing
MHD channel component development. Quarterly report, October-December 1984, 10:39419 (R;US)
MHD GENERATOR CDIF
Coal-fired Component Development and Integration Facility at Butte, Montana.
Electrical Insulators
[Component Development and Integration Facility operations]. Quarterly technical progress report, April 1-June 30, 1985, 10:39418 (R;US)
Flowmeters
[Component Development and Integration Facility operations]. Quarterly technical progress report, April 1-June 30, 1985, 10:39418 (R;US)
MHD GENERATORS
Combustors
Application of advanced slagging combustor to coal-fired gas turbines, 10:39073 (RA;US)
Computerized Simulation
[Advanced Power Train program analysis]. Quarterly summary, October-December 1984, 10:39420 (R;US)
Fluid Mechanics
[Advanced Power Train program analysis]. Quarterly summary, October-December 1984, 10:39420 (R;US)
MICELLAR-POLYMER FLOODING
See MICROEMULSION FLOODING
MICROANALYSIS
See also ELECTRON MICROPROBE ANALYSIS
Electron Microscopes
Elemental microanalysis in an analytical electron microscope, 10:39668 (RA;CA)
MICROBIAL PROCESSES
See ANAEROBIC DIGESTION
MICROCOMPUTERS
See MICROPROCESSORS
MICROEARTHQUAKES
Monitoring
Detailed microearthquake studies at Long Valley caldera, California, 10:40370 (RA;US)
MICROEMULSION FLOODING
Bench-Scale Experiments
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
MICROEMULSIONS
Electric Conductivity
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
Phase Studies
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
Viscosity
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
MICROPROCESSORS
Trigger Circuits
Fast processor for selecting elastic scattering events, 10:40040 (RA;SU;In Russian)
MIDDLE DISTILLATES
See PETROLEUM DISTILLATES
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY EQUIPMENT
Reserves
Actions taken by DOD on GAO recommendations to improve spare parts requirements determination, 10:41061 (R;US)
Stockpiles
Actions taken by DOD on GAO recommendations to improve spare parts requirements determination, 10:41061 (R;US)
MILITARY FACILITIES
Economic Policy
Improved controls needed over waivers of the Armed Services Exchange Regulations, 10:41063 (R;US)
MILL TAILINGS
Environmental Impacts
Long-term ecological behaviour of abandoned uranium mill tailings. 1. Synoptic survey and identification of invading biota, 10:38939 (R;CA)
Evaporation
Simulation of evaporation from the uranium mill tailings pile at Riverton, Wyoming, 10:38944 (RA;US)
Hydrology
DYNAMIX: a computer program for multiple-species chemical transport with precipitation and dissolution, 10:38945 (RA;US)
Remedial Action
Plan for implementing EPA standards for UMTRA sites, 10:38875 (R;US)
Stabilization
Chemical mixing model describing groundwater contamination from an inactive uranium mill tailings pile, 10:38947 (RA;US)
MINE SHAFTS
Prior to October 1982, this concept was indexed to SHAFT EXCAVATIONS.
Construction
Current technology and recent innovative methods in drilled shaft construction, 10:38734 (R;US)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL WASTES
Ash Content
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)
Calorific Value
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)
Mixing
Modeling the performance of sediment detention pond. Volume 1. The CSTRS (continuous stirred tank reactors in series) model based on simple reactor theory. Final report, 10:38725 (R;US)
Sulfur Content
Comparison of emerging selective agglomeration technologies, 10:38740 (R;US)
MINERALS
See also FELDSPARS
ZEOLITES
Activation Analysis
Characterisation of New Zealand greenstone sources by neutron activation analysis, 10:39669 (RA;NZ)

Recent development and applications of activation methods in radiochemical laboratory of Mineral Raw Materials Institute, 10:39658 (RA;CS;In Czech)

Chemical Analysis

Radionuclide X-ray fluorescence analysis of mineral materials using basic physical parameters, 10:39659 (RA;CS;In Czech)

MINERS

See also COAL MINERS

Health Hazards

Noise exposures of mobile machine operators in US surface coal mines and noise control techniques, 10:38773 (RA;US)

MINING

MODERATING DETECTORS

On-Line Measurement Systems

System for automation of experiments on the search for rare nuclear decay events by detecting multiple neutron emission, 10:40038 (R;SU;In Russian)

MOESSBAUER SPECTROMETERS

Multidimensional parametric Moessbauer spectrometer, 10:39972 (RA;SU;In Russian)

Pulse Generators

Precision signal oscillator for Moessbauer spectroscopy, 10:39776 (RA;SU;In Russian)

Stability

Installation with laser interferometer for nuclear gamma resonance spectroscopy, 10:39975 (RA;SU;In Russian)

MOISTURE GAGES

Calibration

Calibration of humidity measurement instruments using radioactive sources, 10:40153 (RA;MX;In Spanish)

MOLECULAR BEAMS

Supersonic Flow

Computation of low density, supersonic flow over a pitot tube, 10:40459 (R;US)

MOLECULAR ORBITAL MODEL

See ATOMIC MODELS
MOLECULES

MOLECULE COLLISIONS

Bibliographies

International bulletin on atomic and molecular data for fusion. No. 27, 10:40969 (R;XA)

Sudden Approximation

General factorization relations and consistency conditions in the sudden approximation via infinite matrix inversion, 10:40473 (J;US)

MOLECULES

Electronic Structure

Electronic structure of molecules using relativistic effective core potentials, 10:40484 (BA;US)

MOLTEN CARBONATE FUEL CELLS

Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.

Performance Testing

Molten carbonate fuel cell system verification and scale-up. Final report, 10:39427 (R;US)

MOLYBDENUM

Activation Analysis

Utilization of epithermal neutrons for the determination of molybdenum in the presence of uranium, 10:39676 (R;BR;In Portuguese)

Catalytic Effects

Catalyst deactivation in direct coal liquefaction processes: a quantitative approach to understanding the rate of activity loss, 10:38707 (R;US)

Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)

Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No: 7, April 1-June 30, 1985, 10:38694 (R;US)

New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)

Compatibility

Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

Sulfidation

Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)

Superlattices

Metallic multilayers and superlattices, 10:39495 (R;US)

MOLYBDENUM 92 REACTIONS

Deep Inelastic Heavy Ion Reactions

Elastoplasticity tensor for nucleus-nucleus collisions, 10:40805 (RA;FR)

MOLYBDENUM 92 TARGET
Molybdenum 92 Reactions
Elastoplasticity tensor for nucleus-nucleus collisions, 10:40805 (RA;FR)
Neutron Reactions
Investigation of the mechanism of fast neutron scattering by even isotopes of molybdenum, 10:40732 (RA;XA)
MOLYBDENUM 94 TARGET
Neutron Reactions
Investigation of the mechanism of fast neutron scattering by even isotopes of molybdenum, 10:40732 (RA;XA)
MOLYBDENUM 99
Solvent Extraction
Solvent extraction technology of ^{99}Mo-/sup 99m/Tc system: design and operational considerations, 10:39643 (R;IN)
MOLYBDENUM BASE ALLOYS
See also ALLOY-TZM
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)
MOLYBDENUM CARBIDES
Solubility
Molybdenum solubility differences in MC phases formed in titanium and niobium modified austenitic stainless steels determined using AEM, 10:39581 (J;US)
MOLYBDENUM OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)

MYOCARDIUM
Radioisotope Scanning
Myocardial imaging agents: synthesis, characterization, and evaluation of (Z)- and (Z,E)-18-^{82}Brbromo-5-tellura-17-octadecenoic acids, 10:39708 (J;US)

N

NAC CYCLOTRON
Separated sector cyclotron of the National Accelerator Centre, Faure, Republic of South Africa.
Beam Extraction
Report of the Accelerator Group: the light-ion injector, 10:39876 (RA;ZA)
Beam Injection
Report of the Accelerator Group: the light-ion injector, 10:39876 (RA;ZA)
Beam Monitoring
Report of the Accelerator Group: the beam transport system, 10:39875 (RA;ZA)
Beam Transport
Report of the Accelerator Group: the beam transport system, 10:39875 (RA;ZA)
Computerized Control Systems
Report of the Accelerator Group: the control system, 10:39871 (RA;ZA)
Cooling Systems
Report of the Accelerator Group: mechanical engineering, 10:39878 (RA;ZA)
On-Line Control Systems
Report of the Accelerator Group: the control system, 10:39871 (RA;ZA)
Operation
Report of the Pretoria Cyclotron Group, 10:39879 (RA;ZA)
Particle Boosters
Report of the Accelerator Group: the light-ion injector, 10:39876 (RA;ZA)
Power Supplies
Report of the Accelerator Group: electrical engineering, 10:39877 (RA;ZA)
Research Programs
Report of the Pretoria Cyclotron Group, 10:39879 (RA;ZA)
Septum Magnets
Report of the Accelerator Group: the separated-sector cyclotron, 10:39874 (RA;ZA)
Vacuum Systems
Report of the Accelerator Group: mechanical engineering, 10:39878 (RA;ZA)
NACSSC
See NAC CYCLOTRON
NAI DETECTORS
Accuracy
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)
Design
Si(Li)-NaI(Tl) sandwich detector array for measurements of trace radionuclides in soil samples, 10:39890 (R;US)
Energy Resolution
Spectrometric NaI(Tl) detector for cosmophysical investigations, 10:39892 (R;SU;In Russian)
Performance
Use of large NaI(Tl) i CsI(Tl) crystals for electron energy measurement in wide energy range, 10:39894 (R;SU;In Russian)
Sensitivity
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)
Si(Li)-NaI(Tl) sandwich detector array for measurements of trace radionuclides in soil samples, 10:39890 (R;US)
Time Resolution
Detector systems for the integral intensity measurement of nuclear radiation with high accuracy and time resolution, 10:39912 (R;DE;In German)
NAPHTHALENE
Absorption Spectra
Direct measurement of the stop gap for the 31 475 cm^{-1} singlet a exciton of naphthalene, 10:39628 (J;US)
Fluorescence
Direct measurement of the stop gap for the 31 475 cm^{-1} singlet a exciton of naphthalene, 10:39628 (J;US)
Nonlinear Optics
Nonlinear polariton effects in naphthalene, 10:40919 (R;US)
NARORA-1 REACTOR
Narora, Uttar Pradesh, India

Computerized Control Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)
Data Acquisition Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)

NARORA-2 REACTOR
Narora, Uttar Pradesh, India
Computerized Control Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)
Data Acquisition Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)

NASA
Program Management
Recommended safety, reliability, quality assurance and management aerospace techniques with possible application by the DOE to the high-level radioactive waste repository program, 10:38916 (R;US)

NATIONAL AERONAUTICS AND SPACE ADMINISTRA
See NASA

NATIONAL GOVERNMENT
Use only when needed in conjunction with one or both of the terms LOCAL GOVERNMENT and STATE GOVERNMENT.
Buildings
Planning for energy self-reliance: a case study of the District of Columbia, 10:39437 (R;US)
Research Programs
Outlook for expanding the Federal Research In Progress System, 10:41095 (R;US)

NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY

NATURAL GAS
See also LIQUEFIED NATURAL GAS
Calorific Value
Development of a prototype energy meter. Final report, November 1982-August 1984, 10:38806 (R;US)
Combustors
Improved oxygen-separator development program. Topical report, December 1982-April 1983, 10:38808 (R;US)
Competition
Factors affecting the competitive position of natural gas in industrial process heat applications, 10:38802 (R;US)
Energy Consumption
Monthly Energy Review, April 1985, 10:39414 (R;US)
Financial Incentives
Solid-desiccant dehumidification systems for residential applications. Final report, October 1983-March 1985, 10:39452 (R;US)
Isotope Ratio
Preliminary isotopic and chemical characterization of natural gas in sediments of Lac Harrington, Quebec and Golden Lake, Ontario, 10:38800 (RA;CA)
Market
Factors affecting the competitive position of natural gas in industrial process heat applications, 10:38802 (R;US)
Production
Monthly Energy Review, April 1985, 10:39414 (R;US)
Reserves
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

NATURAL GAS DEPOSITS
Exploration
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
Leasing
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
Resource Assessment
Estimates of undiscovered, economically recoverable oil and gas resources for the Outer Continental Shelf as of July 1984, 10:38784 (R;US)
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

NATURAL GAS INDUSTRY
Research Programs
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1984, 10:38807 (R;US)

NATURAL GAS WELLS
Hydraulic Fracturing
PDCRAC: a three-dimensional hydrofracture program. User's manual, 10:38791 (R;US)

NATURAL LIGHTING
See DAYLIGHTING

NATURAL URANIUM REACTORS
Reactors primarily fuelled with NATURAL URANIUM.
See also BRUCE-4 REACTOR
DOUGLAS POINT ONTARIO REACTOR
JATR REACTOR
MAGNOX TYPE REACTORS
NARORA-1 REACTOR
NARORA-2 REACTOR
PICKERING-5 REACTOR
POINT LEPREAU-1 REACTOR
RAJASTHAN-1 REACTOR
RAJASTHAN-2 REACTOR
Fuel Management
Study of Xe poisoning effect on fuel displacement strategies in a nuclear electric plant equipped with a natural uranium - heavy water reactor, 10:39144 (R;RO;In Romanian)
Poisoning
Study of Xe poisoning effect on fuel displacement strategies in a nuclear electric plant equipped with a natural uranium - heavy water reactor, 10:39144 (R;RO;In Romanian)

NATURE RESERVES
Geochemical Surveys
Analytical results of stream-sediment samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40395 (R;US)
Spectrographic and chemical analyses of rock and soil samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40394 (R;US)
Mineral Resources
Assessment of mineral resources in the Muggins Mountains Bureau of Land Management Wilderness Study Area (AZ-050-53A), Yuma County, Arizona, 10:40354 (R;US)

NEBRASKA
Rivers
Hydrogeology of parts of the Central Platte and Lower Loup Natural Resources Districts, Nebraska, 10:40359 (R;US)

NEGATONS
See ELECTRONS

NEGATRONS
See ELECTRONS

NEODYMIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)

NEODYMIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)

NEODYMIUM 144
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

NEODYMIUM 145
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

NEODYMIUM BROMIDES
Hydrolysis
Studies on the vapour phase hydrolysis of some lanthanide and actinide (III) bromides, 10:39703 (R;DE;In German)

NEODYMIUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
NEODYMIUM ISOTOPES
See also NEODYMIUM 141
NEODYMIUM 144
NEODYMIUM 145
Energy Levels
Low-lying dipole states of spherical nuclei, 10:40736 (RA;SU;In Russian)
NEODYMIUM LASERS
Design
Spectrally-broad picosecond light source, 10:39746 (R;US)
Optical Pumping
Argon arc lamps, 10:40100 (J;US)
NEON
Antineutrino-Nucleon Interactions
Nuclear effect study on nucleon structure functions, in comparison with antineutrino interactions on neon and deuterium, 10:40535 (R;FR;In French)
Ion-Atom Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Study on a neon Auger spectrum in ion-atom collisions with neon and argon ions at E=5.6 MeV/nucleon 230, 10:40455 (RA;SU;In Russian)
Ion-Molecule Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
NEON 20 REACTIONS
Alpha Spectra
Fast light ejectiles as a probe of reaction mechanism. The important effect of decomposition into different sources, 10:40766 (RA;FR)
Heavy Ion Fusion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Fusion oscillations for symmetric light heavy-ion systems, 10:40694 (RA;SU)
Inclusive Interactions
Anisotropy ratio for proton inclusive production at 400 MeV/N, 10:40704 (RA;FR)
Neutron Transfer
Investigation of some approximation used in promptly emitted particle models, 10:40748 (RA;FR)
Nuclear Fragments
Fragment production in the $^{20}Ne+^{27}Al$ system at 30 MeV/A, 10:40703 (RA;FR)
Precompound-Nucleus Emission
Fast light ejectiles as a probe of reaction mechanism. The important effect of decomposition into different sources, 10:40766 (RA;FR)
NEON 20 TARGET
Neon 20 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Neutrino Reactions
Ratio of the x-distributions for antineutrino interactions in neon and deuterium, 10:40528 (R;SU)
NEON 22 REACTIONS
Incomplete Fusion Reactions
Study on reaction mechanism of incomplete fusion reactions; with reaction channel isolation on X-ray radiation of residual nuclei, 10:40761 (RA;SU;In Russian)
Nuclear Reaction Kinetics
Direct processes in heavy ion reactions, 10:40762 (RA;SU;In Russian)
NEOPLASMS
See also CARCINOMAS
SARCOMAS
Epidemiology
Assigned share for radiation as a cause of cancer: review of radioepidemiologic tables assigning probabilities of causation. Final report, 10:40298 (R;US)
Radioinduction
Assigned share for radiation as a cause of cancer: review of radioepidemiologic tables assigning probabilities of causation. Final report, 10:40298 (R;US)
NEPTUNIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Solubility
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
Sorption
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
NEPTUNIUM 237
Biological Half-Life
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Excretion
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Retention
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
NEPTUNIUM 237 TARGET
Neutron Reactions
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{232}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)
NEPTUNIUM 239
Biological Half-Life
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Excretion
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Intestinal Absorption
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Retention
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Tissue Distribution
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
NEPTUNIUM 240
Biological Half-Life
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Intestinal Absorption
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Tissue Distribution
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
NEPTUNIUM ALLOYS
Fermi Level
Analysis of the series of moderately heavy fermion materials: $CeSn_3$, USn_3, and $NpSn_3$, 10:39491 (R;US)
NETHERLANDS
Energy Policy
Netherlands - energy situation 1983/1984, 10:39375 (R;DE;In German)
Energy Supplies
Netherlands - energy situation 1983/1984, 10:39375 (R;DE;In German)

NEUTRAL ATOM BEAM INJECTION
Targets
Compact, inexpensive target design for steady-state heat removal in high-heat-flux fusion applications, 10:41046 (J;US)
NEUTRAL BEAM SOURCES
Performance
Overview and status of the Transverse-Field Focusing (TFF) accelerator, 10:39800 (R;US)
NEUTRAL PARTICLES
Magnetic Fields
Occurence of an effective anharmonic velocity dependent potential, 10:40880 (R;GB)
NEUTRAL-PARTICLE TRANSPORT
See also NEUTRON TRANSPORT
PHOTON TRANSPORT
Trajectories
Numerical study of the mean-trajectory approximation in a nonadiabatic process. Annual technical report, 10:40793 (R;US)
NEUTRETTOS
See MUON NEUTRINOS
NEUTRINO DETECTION
Liquid Scintillation Detectors
Investigation of noise levels and useful effect in the neutrino experiment on the inverse beta-decay in the Rovno NPP laboratory, 10:39896 (R;SU;In Russian)
Noise
Investigation of noise levels and useful effect in the neutrino experiment on the inverse beta-decay in the Rovno NPP laboratory, 10:39896 (R;SU;In Russian)
Spectrometers
Investigation of noise levels and useful effect in the neutrino experiment on the inverse beta-decay in the Rovno NPP laboratory, 10:39896 (R;SU;In Russian)
NEUTRINO OSCILLATION
Limiting Values
Brief report on a new limit on the strength of mixing between nu/sub μ/ → nu/sub e/, 10:40500 (R;US)
NEUTRINO REACTIONS
Excitation of arbitrary spin nuclei by neutrino and the structure of weak hadron neutral current, 10:40837 (RA;SU;In Russian)
Multiple Production
Properties of multiplicity distributions in nuA and antinuA interactions at Esub((anti nu)) <= 30 GeV, 10:40520 (R;SU)
Particle Production
Detection and analysis of neutrino interactions with nuclei in photoemulsion at IHEP accelerator (Serpukhov), 10:40529 (R;SU;In Russian)
Estimate of hadron formation length in neutrino interactions, 10:40521 (R;SU;In Russian)
Ratio of the x-distributions for antineutrino interactions in neon and deuterium, 10:40528 (R;SU)
Reviews
Electroweak processes at a neutron spallation source, 10:40526 (RA;DE)
NEUTRINO-ELECTRON INTERACTIONS
Reviews
Electroweak processes at a neutron spallation source, 10:40526 (RA;DE)
NEUTRINO-NEUTRON INTERACTIONS
Brief report on a new limit on the strength of mixing between nu/sub μ/ → nu/sub e/, 10:40500 (R;US)
NEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-NUCLEON INTERACTIONS
NEUTRINO-NEUTRON INTERACTIONS
NEUTRINO-PROTON INTERACTIONS
Particle Production
Experimental status and prospects of flavour mixing and CP violation, 10:40523 (RA;DE)
NEUTRINO-PROTON INTERACTIONS
Inclusive Interactions
Polarization of Λ hyperons produced inclusively in νp and anti νp charged current interactions, 10:40536 (R;DE)
Particle Production
Polarization of Λ hyperons produced inclusively in νp and anti νp charged current interactions, 10:40536 (R;DE)
Polarized Products
Polarization of Λ hyperons produced inclusively in νp and anti νp charged current interactions, 10:40536 (R;DE)
NEUTRINOS
See also ELECTRON NEUTRINOS
MUON NEUTRINOS
SOLAR NEUTRINOS
TAU NEUTRINOS
Reviews
Status and outlook in searches for heavy neutrinos, 10:40525 (RA;DE)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON ACTIVATION ANALYZERS
Construction of a facility for 14 MeV neutron activation analysis of oxygen in aluminium, 10:39678 (R;NO)
NEUTRON BEAMS
Filters
Neutron resonance averaging with filtered beams, 10:40664 (R;US)
Spin Flip
Experimental testing of nonadiabatic spin flipper for wide neutron beams, 10:40078 (R;SU;In Russian)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON CHOPPERS
Modulation of ultracold neutron flux by means of thin-film ferromagnetic shutter, 10:40032 (R;SU;In Russian)
NEUTRON DETECTION
Calorimeters
Power deposition measurements at the LAMPF Neutron Radiation Effects Facility, 10:39859 (R;US)
He-3 Counters
Use of ^{3}He proportional chamber in low neutron flux measurement; results for selected localities, 10:39940 (RA;CS;In Slovak)
Plastic Scintillation Detectors
Determination of the absolute efficiency of an organic scintillator for neutrons with energies between 0.5 and 800 MeV, 10:40053 (J;NL)
NEUTRON DETECTORS
See also ACTIVATION DETECTORS
FISSION CHAMBERS
FISSION FOIL DETECTORS
HE-3 COUNTERS
MODERATING DETECTORS
Optimization
Optimization of delayed neutron detection units for activation analysis of uranium and thorium, 10:40061 (RA;XA)
Specifications
Electret ionization chamber, a detector of mixed neutron/gamma radiation dose, 10:39929 (RA;CS;In Czech)
NEUTRON DIFFRACTOMETERS
Data Acquisition Systems
Software for data acquisition system of the DN-2 diffractometer at the IBR-2 pulsed reactor, 10:40034 (R;SU;In Russian)
NEUTRON DIFFUSION EQUATION
Computer Calculations
Application of the finite element method in the solution of steady state diffusion equation, 10:39177 (RA;BR;In Portuguese)
Two-energy group solution of the diffusion equation by the multidimensional nodal polynomial expansion method (EPON computer code), 10:39180 (RA;BR;In Portuguese)
Computer Codes
Two-energy group solution of the diffusion equation by the multidimensional nodal polynomial expansion method (EPON computer code), 10:39180 (RA;BR;In Portuguese)
F Codes
Development of a methodology to generate materials constant for the FLARE-G computer code, 10:39179 (RA;BR;In Portuguese)
Finite Element Method
Application of the finite element method in the solution of steady state diffusion equation, 10:39177 (RA;BR;In Portuguese)

NEUTRON DOSIMETRY
Computer Calculations
Fast neutron depth dose distributions in a heterogeneous phantom, 10:40276 (R;US)
Depth Dose Distributions
Investigation of radiation dose fields from the fast neutron beams obtained from d(50 MeV) → Be reaction, 10:40912 (RA;SU;In Russian)
Geiger-Mueller Counters
Neutron dosimetry using ionization measurement methods, 10:39926 (RA;CS;In Czech)
Ionization Chambers
Neutron dosimetry using ionization measurement methods, 10:39926 (RA;CS;In Czech)
Radiation Dose Units
Inspection of Bragg-Gray theory applicability to the ionization chamber, irradiated by approximately 20 MeV neutrons, 10:40913 (RA;SU;In Russian)
NEUTRON ECONOMY
See NEUTRON FLUX
NEUTRON FLUX
Flux Density
Use of activation detectors for low neutron flux densities, 10:39930 (RA;CS;In Czech)
Measuring Methods
Use of ^{3}He proportional chamber in low neutron flux measurement; results for selected localities, 10:39940 (RA;CS;In Slovak)
NEUTRON FLUX DENSITY
See FLUX DENSITY
NEUTRON FLUX
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON MOISTURE METERS
See MOISTURE GAGES
NEUTRON RADIOGRAPHY
Czechoslovak system for X-ray and neutron nondestructive testing, 10:39763 (RA;SU)
NEUTRON REACTIONS
Capture
Dipole photon strength functions of compound-compound γ-transitions and γ-spectra of neutron radiative capture, 10:40737 (RA;SU;In Russian)
Evaluation of fast-neutron radiative capture cross-sections for samarium and europium odd isotopes, 10:40733 (RA;XA)
Measurements of neutron capture cross sections, 10:40667 (RA;JP;In Japanese)
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)
Cross Sections
BARC-35: A 35 group cross-section library with P_3-anisotropic scattering matrices and resonance self-shielding factors, 10:40864 (R;IN)
Evaluation of fission product neutron cross sections for JENDL, 10:40652 (RA;JP)
Fission product nuclear data measurements at the JAERI linac, 10:40659 (RA;JP)
Measurements of global fission products cross sections in PWR spectrum, 10:40656 (RA;JP)
Model for fission-product calculations, 10:40658 (RA;JP)
Quality assessment and consistency check of measured nuclear data up to 20 MeV including the range of resonances. Final report for the period 1 May 1982-30 April 1984 (Data compilation on (n,t) and N,^{3}He) cross sections), 10:40705 (R;XA)
Data Compilation
Quality assessment and consistency check of measured nuclear data up to 20 MeV including the range of resonances. Final report for the period 1 May 1982-30 April 1984 (Data compilation on (n,t) and N,^{3}He) cross sections), 10:40705 (R;XA)
Elastic Scattering
Differential cross-sections for neutron scattering by Fe nuclei over the 0.1-0.8 MeV energy range, 10:40714 (RA;XA)
Energy dependence of the optical model of neutron scattering from niobium, 10:40723 (R;US)
Investigation of the mechanism of fast neutron scattering by even isotopes of molybdenum, 10:40732 (RA;XA)
Modelless description of quarted nd-phase at low energies, 10:40671 (RA;SU;In Russian)
Fast Fission
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{232}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)
Inelastic Scattering
Investigation of the mechanism of fast neutron scattering by even isotopes of molybdenum, 10:40732 (RA;XA)
Investigation of emission neutron spectra for ^{235}U at incident neutron energy of 4.9 MeV, 10:40779 (RA;XA)
Optical Models
Energy dependence of the optical model of neutron scattering from niobium, 10:40723 (R;US)
Pickup Reactions
Quality assessment and consistency check of measured nuclear data up to 20 MeV including the range of resonances. Final report for the period 1 May 1982-30 April 1984 (Data compilation on (n,t) and N,^{3}He) cross sections), 10:40705 (R;XA)
Secondary Emission
Assessment of secondary gamma radiation caused by neutron interactions in iron, 10:39931 (RA;CS;In Czech)
Thermal Fission
Prompt neutron spectra for the energy range 10 keV - 3 MeV from ^{239}Pu and ^{233}U fission by thermal neutrons, 10:40780 (RA;XA)
Total Cross Sections
Measurements of neutron capture cross sections, 10:40667 (RA;JP;In Japanese)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Accelerators
Sealed ion accelerator tubes (survey), 10:39803 (TG;US)
Data Acquisition Systems
Configuration for the WNR data acquisition system for neutron measurements, 10:40878 (R;US)
NEUTRON SPECTRA
Computer Calculations
Evaluation of fast neutron spectra (0.5-14.0 MeV) by means of a passive miniature proton spectrometer based on polyethylene radiators and a CR-39 track detector, 10:39956 (RA;IL)
Mathematical Models
Development of programs for calculating neutron spectra from integral detector data, 10:39937 (RA;CS;In Czech)
NEUTRON SPECTROMETERS
JAERI Tandem neutron TOF spectrometer, 10:39843 (RA;JP;In Japanese)
Fabrication
Los Alamos constant-Q spectrometer, 10:40042 (R;US)
Goniometers
General concepts of the NG-3 goniometer design and coupled electronic control system, 10:40015 (RA;SU;In Russian)
Operation
Los Alamos constant-Q spectrometer, 10:40042 (R;US)
NEUTRON SPECTROSCOPY
Computer Codes
Updated users' guide for SAMMY: multilevel R-matrix fits to neutron data using Bayes' equations. Revision 1, 10:40879 (R;US)
Dielectric Track Detectors
Measuring the neutron energy spectrum of laser fusion targets with CR-39, 10:40055 (J;GB)
Interlaboratory Comparisons
Neutron spectra following passage through iron, 10:39935 (RA;CS;In Czech)
On-Line Measurement Systems
Microcomputer-controlled set-up for measurements of differential neutron cross sections, 10:40012 (RA;SU)
Proton Spectrometers
Evaluation of fast neutron spectra (0.5-14.0 MeV) by means of a passive miniature proton spectrometer based on polyethylene radiators and a CR-39 track detector, 10:39956 (RA;IL)

Time-of-Flight Spectrometers
Unit for coincidence multiplicity coding for a time-of-flight neutron spectrometer, 10:40009 (RA;SU;In Russian)

NEUTRON THERAPY
Research Programs
Report of the Pretoria Cyclotron Group, 10:39879 (RA;ZA)

NEUTRON TRANSPORT
Computer Calculations
BARC-35: A 35 group cross-section library with P_3-anisotropic scattering matrices and resonance self-shielding factors, 10:40864 (R;IN)
Computer Codes
Neutron-induced photon production in MCNP, 10:40885 (BA;JP)
Monte Carlo Method
Neutron-induced photon production in MCNP, 10:40885 (BA;JP)

NEUTRON TRANSPORT THEORY
Numerical Solution
Numerical resolution of the neutron transport equation by Octuplo-Po method, 10:39181 (RA;BR;In Portuguese)

NEUTRONS
See also FAST NEUTRONS
FISSION NEUTRONS
PHOTONEUTRONS
THERMAL NEUTRONS
Energy Losses
Search for the phonon analog of Cherenkov radiation at the neutron passage flight through matter, 10:40876 (R;SU;In Russian)
Filters
Neutron tests on samarium polarising filters, 10:40881 (R;GB)
Magnetic Fields
Occurence of an effective anharmonic velocity dependent potential, 10:40880 (R;GB)
Resonance Absorption
Neutron tests on samarium polarising filters, 10:40881 (R;GB)
Scattering
f-sum rule for magnetic neutron-electron scattering, 10:40882 (R;GB)
Summary talk covering application-oriented sessions, 10:40646 (R;US)
Spin Flip
To calculation of a neutron adiabatic spin-flipper, 10:40082 (R;SU;In Russian)

NEVADA
Geothermal Fields
Geologic and hydrologic research on the Moana geothermal system - Washoe County, Nevada, 10:39033 (BA;US)
Hot Springs
Structural control of the Baltazor Hot Springs geothermal system, Humboldt County, Nevada, 10:39035 (BA;US)
KGRA
Structural control and alteration at Beowawe KGRA, Nevada, 10:39038 (BA;US)

NEVADA TEST SITE
Boreholes
Barometric pressure transient testing applications at the Nevada Test Site: formation permeability analysis. Final report, 10:40387 (R;US)
Geology
Nevada Test Site field trip guidebook 1984, 10:40342 (R;US)
Radiation Monitoring
Radiological effluent and onsite area monitoring report for the Nevada Test Site, January 1984-December 1984, 10:40136 (R;US)

NEW BRUNSWICK
Earthquakes
Canadian seismic agreement. Technical report covering, 1979-1985. Volume 1, 10:40379 (R;US)

NEW HAMPSHIRE
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

NEW JERSEY
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

NEW MEXICO
Calderas
Stratigraphy of the Bandelier Tuff and characterization of high-level clay alteration in borehole B-20, Redondo Creek area, Valles Caldera, New Mexico, 10:39036 (BA;US)
Geothermal Fields
Hot dry rock geothermal reservoir fracturing initial field operations-1982, 10:39056 (BA;US)
Microearthquakes induced during hydraulic fracturing at the Fenton Hill HDR site: The 1982 experiments, 10:39054 (BA;US)
Geothermal Resources
Thermal anomaly study for the Otero County area, South Central New Mexico, 10:39037 (BA;US)
Indian Reservations
Water resources on the Pueblo of Laguna, west-central New Mexico, 10:40357 (R;US)
Temperature Surveys
Thermal anomaly study for the Otero County area, South Central New Mexico, 10:39037 (BA;US)

NEW YORK
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

NEW ZEALAND
Nuclear Physics
Nuclear Physics Group progress report January-December 1982, 10:41074 (R;NZ)
Research Programs
Nutrient processing and biomass production in the New Zealand estuaries, 10:40199 (R;NZ)

NEWFOUNDLAND
Geologic Deposits
Fourfold significance of an early Silurian U-Pb zircon age from rhyolite in redbeds, southwest Newfoundland, 10:40330 (RA;CA)

NEWTON MECHANICS
See CLASSICAL MECHANICS

NICKEL
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Alpha Reactions
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
Catalytic Effects
Catalyst deactivation in direct coal liquefaction processes: a quantitative approach to understanding the rate of activity loss, 10:38707 (R;US)
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)
Composite-bed reactor for upgrading coal-derived liquids. Quarterly report No. 7, April 1-June 30, 1985, 10:38694 (R;US)
New and improved dispersion and recovery techniques for slurry phase catalysis. Quarterly progress report, January-March 1985, 10:38691 (R;US)
Chemical Vapor Deposition
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)
Compression
Chemical synthesis under shock compression, 10:39559 (R;US)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Spin Waves
New interpretation of spin-wave behavior in nickel and iron, 10:39489 (R;US)

Sulfidation
Catalytic hydrotreatment studies with model compounds. Quarterly report, April 1-June 30, 1985, 10:38696 (R;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

NICKEL 61 TARGET
Oxygen 18 Reactions
Quasi-elastic neutron pick-up reactions induced by ^{18}O ions on nickel targets, 10:40718 (RA;FR)

NICKEL 64 TARGET
Oxygen 18 Reactions
Quasi-elastic neutron pick-up reactions induced by ^{18}O ions on nickel targets, 10:40718 (RA;FR)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
STAINLESS STEEL-21-6-9
Chemisorption
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report, January-December 1984, 10:39555 (R;US)
Electronic Structure
Experimental studies of the geometric and electronic structure of chemisorption bonding. Annual report, January-December 1984, 10:39555 (R;US)
Explosive Forming
Synthesis of nickel-aluminum alloys by shock compression of composite particles, 10:39591 (R;US)
Order Parameters
Dense random packed model for amorphous $Ni_{33}Zr_{33}$: influence of the heat of mixing, 10:39492 (R;US)
Phase Studies
Synthesis of nickel-aluminum alloys by shock compression of composite particles, 10:39591 (R;US)
Powder Metallurgy
High energy rate densification and forming of metal powders. Final report, 1 June 1963-1 June 1966, 10:39477 (R;US)

NICKEL BASE ALLOYS
See also ALLOY-IN-100
Corrosion
Effect of hot section surface temperature on corrosion and heavy fuel ash deposits, 10:39079 (RA;US)
Grain Boundaries
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Hydrogen Embrittlement
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Intergranular Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)
Magnetic Properties
Itinerant electron ferromagnetism in Fe-alloyed, Ni_3Al based materials, 10:39493 (R;US)
Materials Testing
Materials division facilities and equipment (Petten Establishment, high temperature materials), 10:39503 (R;XE)
Stress Corrosion
Influence of grain boundary chemistry and structure on the intergranular attack and intergranular stress corrosion cracking of austenitic alloys. Progress report, December 1, 1984-July 31, 1985 (Ni-Cr-Fe), 10:39497 (R;US)

NICKEL CHLORIDES
Metabolism
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)
Tissue Distribution
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)
Toxicity
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)

NICKEL COMPOUNDS
See also NICKEL CHLORIDES
NICKEL SULFIDES
Photochemical Reactions
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)
Pyrolysis
Metal film deposition by gas-phase laser pyrolysis of nickel tetracarbonyl, 10:39571 (J;US)

NICKEL IONS
Ion-Atom Collisions
Low energy charge capture cross sections, 10:40437 (R;GB)

NICKEL SULFIDES
Metabolism
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)
Tissue Distribution
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)
Toxicity
Toxicology and metabolism of nickel compounds. Progress report, 1 December 1984-30 November 1985, 10:40308 (R;US)

NIOBIUM
Physical Radiation Effects
Electron irradiation effect on single crystal of niobium, 10:39511 (RA;BR)
Positron Collisions
Vacancies in thermal equilibrium in Nb, 10:39480 (R;US)
Superconductivity
Properties of niobium recovered from megabar dynamic pressures, 10:39566 (R;US)

NIOBIUM 92
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
Hyperfine Structure
Determination of a magnetic hyperfine field for sup(92m)Nb in $ZrFe_2$ using the oriented nuclear technique, 10:40734 (RA;SU;In Russian)

NIOBIUM 93 TARGET
Carbon 12 Reactions
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)
Neutron Reactions
Energy dependence of the optical model of neutron scattering from niobium, 10:40723 (R;US)
Oxygen 18 Reactions
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)

NIOBIUM ADDITIONS
See also STAINLESS STEEL-347
Metallurgical Effects
Molybdenum solubility differences in MC phases formed in titanium and niobium modified austenitic stainless steels determined using AEM, 10:39581 (J;US)

NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 718
NIOBIUM ADDITIONS
NIOBIUM BASE ALLOYS
Embrittlement
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)

Physical Radiation Effects
Formation of linear periodical structures of radiation defects in zirconium - 1% niobium alloy under fast neutron irradiation in WWR type reactors, 10:39504 (R;SU;In Russian)
Stress Corrosion
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)
Superconductivity
Microcrystallography and chemical microanalysis of polycrystalline Nb_3Sn superconductors, 10:39583 (J;US)

NIOBIUM BASE ALLOYS
Physical Radiation Effects
Irradiation defects in the A-15 compounds V_3Si and Nb_3Ge: effects on superconducting and transport properties, 10:39486 (R;FR;In French)

NIOBIUM NITRIDES
Superconductivity
Microscopic investigation of NbN sputtered films, 10:39587 (R;US)

NITRATES
See also PETN
PLUTONIUM NITRATES
Soil Chemistry
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)

NITRIC OXIDE
NO.
Van der Waals Forces
Multiphoton ionization of NO-rare gas van der Waals species, 10:40438 (R;US)

NITRO COMPOUNDS
See also TNT
Compressibility
Dynamic and static compressibility of porous granular hexanitrostilbene, 10:40104 (R;US)

NITROGEN
Electric Conductivity
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Gas Chromatography
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)
Quantitative Chemical Analysis
Inorganic nitrogen in Green River formation oil shale, 10:38817 (R;US)
Shock Waves
Fluids at high dynamic pressures and temperatures, 10:40489 (R;US)
Spectrophotometry
Analytical chemistry methods for boron carbide absorber material. Revision March 1985, 10:39683 (R;US)

NITROGEN 14
Energy Levels
Excitation of low-lying states of light nuclei in the (e,e'), (π,π') and (γ,π) reactions, 10:40682 (RA;SU;In Russian)

NITROGEN 14 REACTIONS
Charge-Exchange Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)

NITROGEN 15
Emission Spectroscopy
^{15}N-labelled tracer techniques-analytical techniques, 10:40256 (RA;MX;In Spanish)
Spectrophotometry
^{15}N-labelled tracer techniques-analytical techniques, 10:40256 (RA;MX;In Spanish)

NITROGEN COMPOUNDS
See also HYDRAZINE
NITRATES
NITROGEN OXIDES
Qualitative Chemical Analysis
Nitrogen compound types in hydrotreated shale oils, 10:38815 (R;US)
Quantitative Chemical Analysis
Nitrogen compound types in hydrotreated shale oils, 10:38815 (R;US)

NITROGEN DIOXIDE
NO_2.
Air Pollution Monitoring
State-of-the-art DAS lidar for SO_2 and NO_2, 10:40130 (R;DE)
Chemical Reaction Kinetics
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
Removal
Development and revision of air quality standards with special attention to the NO_2 standard review, 10:40149 (RA;US)

NITROGEN FIXATION
Tracer Techniques
^{15}N labelled tracer techniques used in the quantitative measurement of nitrogen absorption in wheat crops, 10:40255 (RA;MX;In Spanish)
Isotopic techniques in quantitative determinations of biologically fixed nitrogen, 10:40258 (RA;MX;In Spanish)

NITROGEN NITRIDES
See NITROGEN

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
NITROUS OXIDE
Air Pollution Abatement
Air quality control from a state regulator's viewpoint, 10:40148 (RA;US)
Air Pollution Control
Regulatory pressures for increased NO/sub x/ control, 10:40131 (RA;US)
State of California perspective on NO/sub x/ control for stationary sources, 10:40151 (RA;US)
Removal
Proceedings of the joint symposium on stationary combustion NO/sub x/ control. Volume I. NO/sub x/ emission issues and invited papers, 10:38724 (R;US)

NITRONIC 40
See STAINLESS STEEL-21-6-9

NITROSOUREAS
Genetic Effects
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Progress report, July 15, 1984-July 15, 1985, 10:40210 (R;US)

NITROUS OXIDE
N_2O.
Ecological Concentration
Carbon dioxide and nitrous oxide in the surface waters of the Norwegian, Barents and East Greenland Seas-YMER CRUISES, 10:40185 (RA;US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NOISE POLLUTION
Regulations
Introduction, 10:38771 (RA;US)
Standards
Introduction, 10:38771 (RA;US)

NOISE POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Environmental Engineering
Quieted percussion drills, 10:38777 (RA;US)
Materials
Compendium of materials for noise control. Technical report, 10:40320 (R;US)
Systems Analysis
Compendium of materials for noise control. Technical report, 10:40320 (R;US)

NOISE POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Coal cutting noise control, 10:38775 (RA;US)
Noise exposures of mobile machine operators in US surface coal mines and noise control techniques, 10:38773 (RA;US)
Environmental Engineering
Noise control in coal preparation plants, 10:38780 (RA;US)
Meetings
Noise control. Proceedings: Bureau of Mines technology transfer seminars, 10:40317 (R;US)

NONAXIAL NUCLEI
See DEFORMED NUCLEI
NONDESTRUCTIVE ANALYSIS
See also X-RAY EMISSION ANALYSIS
Wave Propagation
Maximum entropy reconstruction of a volume anomaly from pulse scatter data, 10:39765 (BA;US)
NONDESTRUCTIVE TESTING
See also ELECTRICAL TESTING
Economic Analysis
Economic evaluation of concurrent welding and nondestructive examination, 10:39762 (R;US)
NONRADIOACTIVE WASTES
See GASEOUS WASTES
LIQUID WASTES
SOLID WASTES
NORTH CAROLINA
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
Electric Utilities
Region-specific study of the electric utility industry: financial history and future power requirements for the VACAR region, 10:39412 (R;US)
Region-specific study of the electric utility industry: problem identification, analysis, and recommendations, 10:39413 (R;US)
Region-specific study of the electric utility industry. Phase I, final report, 10:39411 (R;US)
NORTHERN IRELAND
See UNITED KINGDOM
NORTHWEST TERRITORIES
Geology
Geology and U-Pb geochronology of parts of the Leith Peninsula and Riviere Grandin map areas, District of Mackenzie, 10:40327 (RA;CA)
NORWEGIAN ORGANIZATIONS
Research Programs
Annual report 1983. [Institute for Energy Technology, Norway], 10:41073 (R;NO)

Semiclassical Approximation
Semiclassical description of hot nuclear systems, 10:40802 (RA;FR)

NUCLEAR MEDICINE
Coordinated Research Programs
Health physics research abstracts No. 11, 10:40278 (R;XA)

NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Translation of selected papers published in Nuclear Constants 1(50) 1983, 10:40649 (R;AT)
Radiation Detectors
Nuclear physics and nuclear instrumentation, 10:40665 (RA;MX;In Spanish)
Research Programs
Joint annual report 1983. [Nuclear physics research at ZFK Rossendorf and other GDR institutions], 10:40661 (R;DD;In German)

NUCLEAR POTENTIAL
Effective Range Theory
Realistic effective interaction for nucleus - Nucleus collision, 10:40807 (RA;FR)

NUCLEAR POWER
Market
Current assessment and future potential of the international nuclear market, 10:39389 (R;BE)
Proliferation
Nuclear power and the non-proliferation issue, 10:39392 (R;GB)
Research Programs
Incorporating the operation of a small research reactor facility to support a national nuclear power program, 10:39228 (RA;IL)

NUCLEAR POWER PLANTS
See also OFFSHORE NUCLEAR POWER PLANTS

Computerized Control Systems
Design and installation of computer systems to meet the requirements of 10 CFR 73.55, 10:39211 (R;US)
Man-machine communication improvements in Computerized Operator Support System by new technologies, 10:39200 (RA;HU)
Methods and techniques used in computerized operator support systems for German NPPs, 10:39204 (RA;HU)
Construction
Advanced LWR program for small modularized plants. Final report, 10:39118 (R;US)
Data Compilation
Electric Power Monthly, April 1985, 10:39405 (R;US)
Decommissioning
Administrative requirements of financial securities to cover decommissioning operations, 10:39333 (R;BE;In Spanish)
ECCS
EPRI R and D contributions to the technical basis for revision of ECCS rules, 10:39301 (R;US)
Emergency Plans
Ordinance of 28 November 1983 on protection in case of emergencies in the neighbourhood of nuclear installations, 10:39160 (R;XA;In French)
Failure Mode Analysis
Programming the diagnosis logic by means of the conversational graphic input to the CRT display device, 10:39320 (RA;HU)
Fault Tree Analysis
Programming the diagnosis logic by means of the conversational graphic input to the CRT display device, 10:39320 (RA;HU)
Fire Hazards
Nuclear Power Plant Fire Protection Research Program, 10:39352 (R;US)
Human Factors Engineering
Experimental applications of an expert system to operator problem solving in process control, 10:39290 (R;US)
Maintenance
Maintenance Personnel Performance Simulation (MAPPS) model: a human reliability analysis tool, 10:39248 (R;US)
Neutron Diffusion Equation
Two-energy group solution of the diffusion equation by the multidimensional nodal polynomial expansion method (EPON computer code), 10:39180 (RA;BR;In Portuguese)
Occupational Safety
Comparison of industrial risks, 10:39338 (RA;CA)
Performance
Survey of regulatory agency review of generating unit performance, 10:39084 (RA;US)
Personnel
Maintenance Personnel Performance Simulation (MAPPS) model: a human reliability analysis tool, 10:39248 (R;US)
Recommendations for NRC policy on shift scheduling and overtime at nuclear power plants, 10:39360 (R;US)
Use of surrogate travel to lower training costs and reduce person-rems, 10:39167 (RA;US)
What's most worth doing: the training manager's dilemma, 10:39166 (RA;US)
Physical Protection
Design and installation of computer systems to meet the requirements of 10 CFR 73.55, 10:39211 (R;US)
Power Generation
Current assessment and future potential of the international nuclear market, 10:39389 (R;BE)
Process Computers
Methods and techniques used in computerized operator support systems for German NPPs, 10:39204 (RA;HU)
Public Information
What about nuclear energy. Questions and answers about the peaceful uses of nuclear energy, 10:39400 (TG;GB)
Quality Assurance
Use of reliability data for QA program evaluation, 10:39367 (R;US)
Radiation Accidents
Planning concepts and decision criteria for sheltering and evacuation in a nuclear power plant emergency. Executive report, 10:39239 (R;US)
Radiation Monitoring
Aerial radiological survey of the Diablo Canyon Nuclear Power Plant and surrounding area, Diablo Canyon, California. Date of survey: September-October 1984, 10:40168 (R;US)
Reactor Control Systems
Structures and scan strategies of software net models, 10:39198 (RA;HU)
Reactor Operation
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 10:39109 (R;HU)
Reactor Operators
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 10:39109 (R;HU)
Recommendations for NRC policy on shift scheduling and overtime at nuclear power plants, 10:39360 (R;US)
Reactor Safety
Extended value-impact decision making methodology for nuclear power plant modifications, 10:39295 (RA;US)
Human error data collection analysis program undertaken since 1982 by Electricite de France with INPO, 10:39296 (RA;US)
Operational safety related human engineering research in Finland, 10:39316 (RA;HU)
Regulations for pressurized component safety in nuclear power plants, 10:39340 (R;SE)
Transition from slow deflagration to detonation. Final report, 10:39364 (R;XE)
Reactor Shutdown
Procedure for determining the SSE response from the OBE response (Safe Shutdown Earthquake (SSE) and Operating Basis Earthquake (OBE)), 10:39245 (R;US)
Risk Assessment
Analysis of routine occupational risks associated with selected electrical energy systems. Final report, 10:40201 (R;US)
Comparison of industrial risks, 10:39338 (RA;CA)
Operational safety related human engineering research in Finland, 10:39316 (RA;HU)
Systems interaction identification procedures. Volume 5. Application of probabilistic risk assessment methods to the systems interaction issue, 10:39294 (R;US)
Safety
Nuclear Safety, 10:39334 (R;GB)
Security
Design and installation of computer systems to meet the requirements of 10 CFR 73.55, 10:39211 (R;US)
Seismic Effects
Alternate procedures for the seismic analysis of multiply supported piping systems, 10:39244 (R;US)
Procedure for determining the SSE response from the OBE response (Safe Shutdown Earthquake (SSE) and Operating Basis Earthquake (OBE)), 10:39245 (R;US)
Spectrometers
Spectrometers for nuclear reactors and NPP, 10:39210 (RA;SU;In Russian)
Standards
Survey of regulatory agency review of generating unit performance, 10:39084 (RA;US)
Statistics
Electric Power Monthly, April 1985, 10:39405 (R;US)
Steam Turbines
Turbine performance monitoring methods and instrumentation, 10:39092 (RA;US)
Systems Analysis
Systems interaction identification procedures. Volume 5. Application of probabilistic risk assessment methods to the systems interaction issue, 10:39294 (R;US)
Systems interaction identification procedures. Volume 1. Assessment and summary, 10:39292 (R;US)
Systems interaction identification procedures. Volume 2. Tools and concepts to facilitate a systems interaction study, 10:39293 (R;US)

Thermoluminescent Dosemeters
Czechoslovak thermoluminescence dosimetry system for nuclear power facilities, 10:39330 (RA;CS;In Czech)
Training
Collection and analysis of training simulator data, 10:39169 (R;US)

NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS

NUCLEAR PROPERTIES
Nuclear Data Collections
Recent references, January through April 1985, 10:40662 (J;US)

NUCLEAR REACTIONS
See also COMPOUND-NUCLEUS REACTIONS
FISSION
HADRON REACTIONS
HEAVY ION FUSION REACTIONS
INCOMPLETE FUSION REACTIONS
PHOTONUCLEAR REACTIONS
Bibliographies
Integral charged particle nuclear data bibliography. Literature scanned from April 1, 1984-March 31, 1985. First edition, Supplement 1, 10:40644 (R;US)
Nuclear Data Collections
Recent references, January through April 1985, 10:40662 (J;US)

NUCLEAR REACTORS
See REACTORS

NUCLEAR SAFETY
See RADIATION PROTECTION

NUCLEAR SPIN RESONANCE
See NUCLEAR MAGNETIC RESONANCE

NUCLEAR THEORY
Meetings
Nuclear theory for applications - 1982. Proceedings of the course on advances in nuclear theory and nuclear data for reactor applications held at Trieste, 25 January-19 February 1982 during the winter college on nuclear physics and reactor jointly organized by the IAEA and the ICTP and held at the ICTP, Trieste, 25 January-26 March 1982, 10:39175 (R;AT)

NUCLEAR TRADE
Trade or commerce involving special nuclear material or any other radioactive materials, instruments, equipment, plants, etc, of nuclear interest.
Legal Aspects
Legal aspects of nuclear technology transfer in connection with Latin America, 10:39390 (R;BE)

NUCLEAR WASTES
See RADIOACTIVE WASTES

NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS

NUCLEAR WEAPONS
Dosimetry
Present status of the reassessment of atomic bomb radiation dosimetry in Hiroshima and Nagasaki, 10:40117 (RA;JP;In Japanese)

NUCLEAR WEAPONS PROLIFERATION
See PROLIFERATION

NUCLEI
See also COSMIC NUCLEI
DEFORMED NUCLEI
EVEN-EVEN NUCLEI
HEAVY NUCLEI
HYPERNUCLEI
INTERMEDIATE MASS NUCLEI
LIGHT NUCLEI
MIRROR NUCLEI
Cluster Model
Atomic nucleus as a cluster system, 10:40825 (RA;SU;In Russian)
Cluster degrees of freedom of nucleus and models with preliminarily formed clusters, 10:40824 (RA;SU;In Russian)
Collective Model
Quadrupole collective excitations in rapidly rotating nuclei, 10:40841 (RA;SU;In Russian)
Density Matrix
Green function and density matrix for superfluid nuclei in a coordinate representation, 10:40814 (RA;SU;In Russian)
Energy-Level Density
New level density formula for arbitrary single particle level density by number theoretical methods, 10:40809 (RA;XA)
Excitation
Excitation of quantum systems by electrons in a magnetic field, 10:40822 (RA;SU;In Russian)
Fermi Level
Accounting for a static deformation of the Fermi surface an determination of equilibrium characteristics of nuclei, 10:40817 (RA;SU;In Russian)
Green Function
Green function and density matrix for superfluid nuclei in a coordinate representation, 10:40814 (RA;SU;In Russian)
Kinetic Equations
Basic kinetic equation for nuclear systems, 10:40823 (RA;SU;In Russian)
Liquid Drop Model
Hydrodynamic fluctuations in nuclei, 10:40818 (RA;SU;In Russian)
P Invariance
Amplification of P and T effects in atomic nuclei, 10:40816 (RA;SU;In Russian)
Pairing Interactions
Pairing in atomic nuclei and nucleon-phonon interaction, 10:40815 (RA;SU;In Russian)
Resonance
Neutron resonance averaging with filtered beams, 10:40664 (R;US)
T Invariance
Amplification of P and T effects in atomic nuclei, 10:40816 (RA;SU;In Russian)
Weizsaecker Formula
Nuclear sizes and optimal mass formula, 10:40820 (RA;SU;In Russian)

NUCLEON-HYPERON INTERACTIONS
Strangeness
Summary of the working group "strong interactions with strange particles", 10:40581 (RA;DE)

NUCLEONS
See also NEUTRONS
PROTONS
Structure Functions
Distributions of valence quarks in hadrons at small x in QCD, 10:40588 (R;SU)
Nuclear effect study on nucleon structure functions, in comparison with antineutrino interactions on neon and deuterium, 10:40535 (R;FR;In French)

NUTRIENTS
Labelling
Isotopic techniques in studies of soil fertility and minerals as plant nutrients, 10:40259 (RA;MX;In Spanish)

NYLON
Electron Spin Resonance
Development of ESR techniques for free radical dosimetry in electron beams, 10:39902 (RA;XA)

O

OAK RIDGE GASEOUS DIFFUSION PLANT
See ORGDP

OAK RIDGE NATIONAL LABORATORY
See ORNL

OAK RIDGE RESERVATION
Deer
White-tailed deer (Odocoileus virginianus) on the Department of Energy's Oak Ridge Reservation: 1982 status report, 10:40175 (R;US)
Electromagnetic Surveys
Geophysical investigations at ORNL solid waste storage area 3, 10:38918 (R;US)
Radioactive Waste Storage
Geophysical investigations at ORNL solid waste storage area 3, 10:38918 (R;US)

Resistivity Surveys
Geophysical investigations at ORNL solid waste storage area 3, 10:38918 (R;US)
Seismic Surveys
Geophysical investigations at ORNL solid waste storage area 3, 10:38918 (R;US)
OCCUPATIONAL SAFETY
Research Programs
Occupational health and environment research 1983: Health, Safety, and Environment Division. Progress report, 10:40324 (R;US)
Standards
Collection of data and information on the appropriate personal protective equipment to be used by petrochemical workers, 10:38793 (R;US)
OCCUPATIONS
Radiation Hazards
Working with radiation, 10:40902 (R;GB)
Radiation Protection
Working with radiation, 10:40902 (R;GB)
OCEAN CURRENTS
See WATER CURRENTS
OCEAN THERMAL POWER PLANTS
Open-Cycle Systems
Measurements of gas sorption from seawater and the influence of gas release on open-cycle ocean thermal energy conversion (OC-OTEC) system performance, 10:39018 (R;US)
ODOCOILEUS
See DEER
OFF-GAS SYSTEMS
Krypton 85
Separation of krypton from dissolver off-gas of a reprocessing plant using preparative gas chromatography, 10:38843 (R;DE;In German)
OFFICE BUILDINGS
Solar Cooling Systems
Operation update and monitoring conclusions of the Georgia Power Company solar system, 10:39019 (BA;US)
Solar Heating Systems
Operation update and monitoring conclusions of the Georgia Power Company solar system, 10:39019 (BA;US)
Solar Space Heating
Operation update and monitoring conclusions of the Georgia Power Company solar system, 10:39019 (BA;US)
OFF-PEAK ENERGY STORAGE
Site Selection
Case studies in technology choice. Volume 3. Georgia Power Company. Final report, 10:39097 (R;US)
Technology Assessment
Case studies in technology choice. Volume 3. Georgia Power Company. Final report, 10:39097 (R;US)
OFFSHORE NUCLEAR POWER PLANTS
Construction
Advanced LWR program for small modularized plants. Final report, 10:39118 (R;US)
OIL FURNACES
Energy Efficiency
Potential energy savings in residential oil-fired heating systems in the US, 10:39446 (R;US)
Field Tests
Potential energy savings in residential oil-fired heating systems in the US, 10:39446 (R;US)
Maintenance
Potential energy savings in residential oil-fired heating systems in the US, 10:39446 (R;US)
Modifications
Potential energy savings in residential oil-fired heating systems in the US, 10:39446 (R;US)
OIL RESIDUES
See PETROLEUM RESIDUES
OIL SAND DEPOSITS
Geology
Tar sand, 10:38812 (RA;US)
OIL SAND OILS
See BITUMENS
OIL SANDS
Carbon Dioxide Injection
Methods of enhancing fluid communication in oil sands, 10:38810 (RA;US)
Hot-Water Processes
Methods of enhancing fluid communication in oil sands, 10:38810 (RA;US)
In-Situ Combustion
Tar sand, 10:38812 (RA;US)
Pyrolysis
Tar sand, 10:38812 (RA;US)
Research Programs
Oil shales, tar sands, and underground coal gasification. Quarterly technical progress report, October-December 1984, 10:38809 (R;US)
Steam Injection
Tar sand, 10:38812 (RA;US)
OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER
OIL SHALES
See also BLACK SHALES
Chemical Composition
Inorganic nitrogen in Green River formation oil shale, 10:38817 (R;US)
Chemical Properties
Oil shale, 10:38811 (RA;US)
Computerized Simulation
Modeling of rock fracture/rock motion, 10:38816 (R;US)
Fracture Properties
Modeling of rock fracture/rock motion, 10:38816 (R;US)
Health Hazards
Los Alamos environmental activities/oil shale effluents, 10:38818 (R;US)
In-Situ Retorting
Oil shale, 10:38811 (RA;US)
Mathematical Models
Modeling efforts within the DOE Oil Shale Program, 10:38814 (R;US)
Physical Properties
Oil shale, 10:38811 (RA;US)
Research Programs
Oil shales, tar sands, and underground coal gasification. Quarterly technical progress report, October-December 1984, 10:38809 (R;US)
Waste Water
Oil shale, 10:38811 (RA;US)
OIL SPILL FINGERPRINTING
See OIL SPILLS
OIL SPILLS
Pollution Control Equipment
Warren Spring beach material washer, 10:38798 (R;GB)
OIL WELLS
Hydraulic Fracturing
PDCRAC: a three-dimensional hydrofracture program. User's manual, 10:38791 (R;US)
Steam Injection
Thermal EOR: a review of insulated tubing and downhole steam generator materials evaluations, 10:38790 (R;US)
Well Casings
Testing of oil field tubulars of large diameter under extreme borehole conditions, 10:39760 (R;DE;In German)
OKLAHOMA
Water Quality
Assessment of water resources in lead-zinc mined areas in Cherokee County, Kansas, and adjacent areas, 10:40189 (R;US)
ONCOGENIC TRANSFORMATIONS
RadioInduction
Neoplastic transformation is enhanced by multiple low doses of fission-spectrum neutrons, 10:40299 (J;US)
ONIONS
Food Processing
Storage properties of irradiated potatoes and onions. Part of a coordinated programme on the Asian Regional Cooperative

Project on Food Irradiation. Final report for the period 1 December 1980 - 31 August 1984, 10:40280 (R;XA)

Radurization

Storage properties of irradiated potatoes and onions. Part of a coordinated programme on the Asian Regional Cooperative Project on Food Irradiation. Final report for the period 1 December 1980 - 31 August 1984, 10:40280 (R;XA)

ON-LINE COMPUTERS

See COMPUTERS

ON-LINE CONTROL SYSTEMS

Computer Networks

Mini- and microcomputer local network design for control and physical researches, 10:40020 (RA;SU;In Russian)

Uses

On-line control system for the LIDIA-M mass spectrometer, 10:40084 (RA;SU;In Russian)

ON-LINE MEASUREMENT SYSTEMS

Computer Networks

CAMAC devices for automatization in investigations of reactors and accelerators, 10:39209 (RA;SU;In Russian)

Measurement centre development of the Nuclear Physics Department, 10:40019 (RA;SU;In Russian)

Mini- and microcomputer local network design for control and physical researches, 10:40020 (RA;SU;In Russian)

Multicomputer complex for applied problems and automatization of heavy ion accelerator experiments, 10:39853 (RA;SU;In Russian)

Computers

3081/E processor and its on-line use, 10:40544 (R;US)

Data Processing

Experimental data registration system of DEMAS-MULTI setup, 10:39986 (R;SU;In Russian)

ONTARIO

Sediments

Preliminary isotopic and chemical characterization of natural gas in sediments of Lac Harrington, Quebec and Golden Lake, Ontario, 10:38800 (RA;CA)

OPERATION (REACTOR)

See REACTOR OPERATION

OPERATORS (MATHEMATICAL)

See MATHEMATICAL OPERATORS

OPTICAL MODELS

Mathematical Models

Momentum-space optical potential SND elastic scattering calculations, 10:40860 (J;US)

Multiple Scattering

First order interpretation of optical potentials, 10:40859 (J;US)

ORBITAL ANGULAR MOMENTUM

Eigenfunctions

Manifest rotation symmetric expressions for angular momentum eigenfunctions, 10:40856 (R;NO)

Manifest rotation symmetric expressions for angular momentum eigenfunctions II, 10:40857 (R;NO)

ORDER PARAMETERS

Mathematical Models

Fractionization of the Witten index in some soluble models, 10:40620 (R;BR)

ORE PROCESSING

On-Line Measurement Systems

Shielding considerations and design of a set up for on-line determination of aluminium in bauxite ore using activation analysis with Am-Be neutron source, 10:39911 (RA;BR)

OREGON

Nature Reserves

Analytical results of stream-sediment samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40395 (R;US)

Spectrographic and chemical analyses of rock and soil samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40394 (R;US)

Rivers

Pacific Northwest Rivers Study assessment guidelines: Oregon, 10:39383 (R;US)

ORES

See also COPPER ORES
IRON ORES
URANIUM ORES
VANADIUM ORES

Activation Analysis

Isotope-source neutron-activation analysis for the determination of manganese in bulk samples, 10:39673 (R;ZA)

ORGANIC CHLORINE COMPOUNDS

See also CHLORINATED AROMATIC HYDROCARBONS

Gas Chromatography

Study on the experimental method of chlorine treatment of raw drinking water, 10:40187 (R;JP;In Japanese)

ORGANIC COMPOUNDS

See also AMINES
AROMATICS
HETEROCYCLIC COMPOUNDS
HYDROXY COMPOUNDS
ORGANIC NITROGEN COMPOUNDS
ORGANIC POLYMERS
PROTEINS

Chemical Reaction Kinetics

Development of a chemical kinetic mechanism for the US EPA (Environmental Protection Agency) regional oxidant model. Interim report, August 1982-July 1984, 10:40118 (R;US)

Subthreshold generation of free radicals in shock-loaded organic solids (1,6-diphenoxy 2,4-hexadiyne; 9-cyanoanthracene), 10:39695 (R;US)

Rock-Fluid Interactions

Hydrophysical interactions of organic chemicals with geological materials. Research highlights subsurface transport program, 10:40160 (R;US)

ORGANIC NITROGEN COMPOUNDS

Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.

See also GUANIDINES
NITRO COMPOUNDS
PARATHION

Chemical Reactions

Mechanisms governing the destruction of nitrogen species during staged coal combustion, 10:38767 (RA;US)

Combustion

Kinetics of sulfur and nitrogen reactions in combustion systems. Quarterly report No. 1, 10:39100 (R;US)

Mechanisms governing the destruction of nitrogen species during staged coal combustion, 10:38767 (RA;US)

Mass Spectra

Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)

Molecular Weight

Separation and characterization of coal derived components. Report period: 1 April-30 June 1985, 10:38712 (R;US)

ORGANIC POLYMERS

See also POLYVINYLS
RUBBERS

Deuteration

Preparation of polymeric deuterium containing compounds, 10:39692 (R;IN)

ORGANIC SOLVENTS

Chemical Composition

Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

Dehydrogenation

Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

Depolymerization

Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)

Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, January 1, 1984-March 31, 1984, 10:38687 (R;US)

NMR Spectra

Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, April 1, 1984-June 31, 1984, 10:38690 (R;US)

Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)

Nuclear Magnetic Resonance
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Thermodynamic Properties
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, March 21-June 30, 1985, 10:38698 (R;US)

ORGDP
Compressors
Correction of compressor critical speed condition through fluid-film bearing optimization, 10:38834 (R;US)

ORNL
Bibliographies
Biomedical and Environmental Sciences Program publications 1984, 10:40297 (R;US)
Chlorinated Aromatic Hydrocarbons
PCB annual report for Oak Ridge National Laboratory, 1983 (Polychlorinated biphenyl), 10:39642 (R;US)

OSCILLATIONS (PLASMA)
See PLASMA WAVES

OSCILLATORS
Masers
Superconducting-cavity-stabilized ruby maser oscillator, 10:39768 (R;US)
Quantum Mechanics
Quantum relativistic oscillator. II. Nonrelativistic limit and phenomenological justification, 10:40944 (J;US)
Superconducting Cavity Resonators
Superconducting-cavity-stabilized ruby maser oscillator, 10:39768 (R;US)

OSLO CYCLOTRON
Radioisotope Generators
Production of /sup 81m/Kr generators at the Oslo cyclotron, 10:39707 (R;NO)

OSMIUM 186
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

OSMIUM BORIDES
Magnetic Properties
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)
Superconductivity
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)

OSTEOSARCOMAS
Radioinduction
^{243} ^{244}Cm studies in C57BL/Do mice, 10:40300 (J;US)

OUTER CONTINENTAL SHELF

OVERHEAD POWER TRANSMISSION
Electric Cables
Design limits of oil/paper high-voltage direct-current cable. Final report, 10:39105 (R;US)
Interference
Utility corridor design: transmission lines, railroads, and pipelines. Volume 1. Engineering analysis and site study. Final report, 10:39106 (R;US)

OXALALDEHYDE
See GLYOXAL

OXIDANTS
See OXIDIZERS

OXIDASES
See OXIDOREDUCTASES

OXIDIZERS
Chemical Reaction Kinetics
Development of a chemical kinetic mechanism for the US EPA (Environmental Protection Agency) regional oxidant model. Interim report, August 1982-July 1984, 10:40118 (R;US)

OXIDIZING AGENTS
See OXIDIZERS

OXIDOREDUCTASES
Code number 1.

Genes
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Progress report, July 15, 1984-July 15, 1985, 10:40210 (R;US)
Mutants
Mutagenic effect of radionuclides incorporated into DNA of Drosophila melanogaster. Progress report, July 15, 1984-July 15, 1985, 10:40210 (R;US)

OXOPROPANE
See ACETONE

OXYGEN
Activation Analysis
Construction of a facility for 14 MeV neutron activation analysis of oxygen in aluminium, 10:39678 (R;NO)
Toxicity
Role of toxicological interactions in lung injury, 10:40315 (J;US)

OXYGEN 16
Energy Levels
Excitation of low-lying states of light nuclei in the (e,e'), (π,π') and (γ,π) reactions, 10:40682 (RA;SU;In Russian)

OXYGEN 16 REACTIONS
Direct Reactions
Nearside-farside analyses of heavy-ion direct reactions to the continuum, 10:40765 (RA;FR)
Evaporation Model
Complete fusion reaction at high energies, 10:40678 (RA;FR)
Fission
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Heavy Ion Fusion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Complete fusion reaction at high energies, 10:40678 (RA;FR)
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Incomplete Fusion Reactions
Competition between peripheral and central emission in incomplete fusion reactions, 10:40727 (RA;FR)
Exclusive measurements in incomplete fusion reactions of Sn with ^{16}O at 5.6, 6.2 and 7.8 MeV/A, 10:40726 (RA;FR)
Mass Spectra
Effects of two-particle two-hole excitations on the mass distributions in the ^{16}O + ^{40}Ca reaction, 10:40709 (RA;FR)
Scattering
Nearside-farside analyses of heavy-ion direct reactions to the continuum, 10:40765 (RA;FR)

OXYGEN 16 TARGET
Giant Resonance
Isospin homogeneity of giant dipole resonances, 10:40681 (RA;SU;In Russian)
Photonuclear Reactions
Microscopic approach to the reactions of γ-quanta cluster absorption at 80 MeV, 10:40689 (RA;SU;In Russian)

OXYGEN 18 REACTIONS
Charge-Exchange Reactions
Production of light element isotopes near by boundary of nuclear stability in the heavy ion charge-exchange reactions, 10:40692 (RA;SU;In Russian)
Pickup Reactions
Quasi-elastic neutron pick-up reactions induced by ^{18}O ions on nickel targets, 10:40718 (RA;FR)

NEUTRAL PARTICLES
PARTICULATES
Deposition
Boundary layer transport of small particles, 10:40128 (R;US)
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Atmospheric Circulation
Dispersion of airborne particulates in surface coal mines: data analysis, 10:38729 (R;US)
Combustion
Enhanced combustion of fossil fuel particles in oscillating flow. Annual technical report, September 1, 1979-August 31, 1980 (Spherical; steady and oscillating flow), 10:38759 (R;US)
Morphological stability in the restricted model of a burning spherical particle, 10:38756 (R;US)
Inhalation
Lung cancer in uranium miners and the implications of the U/V ratio in uranium-bearing particles, 10:40302 (R;US)

Retention
Lung cancer in uranium miners and the implications of the U/V ratio in uranium-bearing particles, 10:40302 (R;US)

PASSIVE SOLAR COOLING SYSTEMS
Performance
Including the effect of control strategy in solar load ratio calculations, 10:39024 (BA;US)

PASSIVE SOLAR HEATING SYSTEMS
Performance
Including the effect of control strategy in solar load ratio calculations, 10:39024 (BA;US)

PBFA
See PARTICLE BEAM FUSION ACCELERATOR

PBX DEVICES
PBX is essentially the old PDX with a rearrangement of the divertor coils. The resultant plasma is "beam-shaped" with a goal of 10 percent beta. MHD properties will be studied.
Reviews
PBX experimental results in 1984, 10:40981 (R;US)
Poloidal Divertor Experiment (PDX) and the Princeton Beta Experiment (PBX), 10:40986 (RA;US)

PCB

PI-MU ATOMS
Quasipotential Equation
Relativistic covariant single-time equation for $(\pi\mu)$ atom, 10:40457 (R;SU;In Russian)
PINES
Isotope Dating
Dendrochronology of bristlecone pine. A progress report, 10:40335 (RA;NZ)
PION MINUS REACTIONS
Capture
Study on the mechanism of π^--meson absorption in the $^{12}C(\pi^-,n\alpha)^7Li$ reaction, 10:40684 (RA;SU;In Russian)
Coherent Production
2^- resonances in the $\pi^+\pi^-\pi^-$ systems, 10:40530 (R;SU)
Compton Effect
Compton effect on π^- meson, 10:40519 (R;SU;In Russian)
PION MINUS-PROTON INTERACTIONS
Charge-Exchange Interactions
Measurement of polarization in the $\pi^- p \rightarrow \pi^0 n$, $\pi^0 \rightarrow 2\gamma$ reaction at the momentum of 40 GeV/c with detection of all reaction products, 10:40531 (R;SU;In Russian)
Reviews
Physics with protons, pions, antiprotons, 10:40577 (RA;DE)
PION PLUS-PROTON INTERACTIONS
Analyzing Power
Analyzing powers in $\pi^+ p$ elastic scattering at intermediate energies, 10:40546 (J;US)
Differential Cross Sections
Differential cross section of the $\pi^+ p \rightarrow K^+\Sigma^+$ (1385) reacton at 12 GeV/c, 10:40533 (R;SU;In Russian)
Elastic Scattering
Analyzing powers in $\pi^+ p$ elastic scattering at intermediate energies, 10:40546 (J;US)
Particle Production
Differential cross section of the $\pi^+ p \rightarrow K^+\Sigma^+$ (1385) reacton at 12 GeV/c, 10:40533 (R;SU;In Russian)
Experimental study on the $\pi^+ p \rightarrow K^+\Sigma^+$ reaction at 12 GeV/c, 10:40532 (R;SU;In Russian)
Reviews
Physics with protons, pions, antiprotons, 10:40577 (RA;DE)
PION REACTIONS
See also PION MINUS REACTIONS
Differential Cross Sections
Structure of differential cross section of diffraction nuclear processes, 10:40741 (RA;SU;In Russian)
Particle Production
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
PION-PION INTERACTIONS
Elastic Scattering
Relation between high-energy and low-energy parameters of $\pi\pi$ interaction, 10:40570 (R;SU;In Russian)
PION-PROTON INTERACTIONS
See also PION MINUS-PROTON INTERACTIONS
PION PLUS-PROTON INTERACTIONS
Inelastic Scattering
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Particle Production
Cross section growth of hadron-hadron interactions and its possible connection with glueball existence, 10:40571 (R;SU;In Russian)
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Spin Orientation
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Total Cross Sections
Total hadron interaction cross section growth, 10:40517 (R;SU;In Russian)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Multiple Production
Local anisotropy effects in the hydrodynamical theory of multiparticle production, 10:40590 (R;SU)

Nuclear Structure
Quarks, bags and the nucleon-nucleon interaction, 10:40858 (J;US)
Particle Production
Annihilation of antiprotons in deuterium with emission of single pions and in helium with emission of two pions, 10:40596 (R;SU;In Russian)
Mean field approach to pion production in intermediate energy heavy ion collisions, 10:40699 (RA;FR)
Structure Functions
Description of π meson structure functions in a relativistic theory of bound states, 10:40593 (R;SU;In Russian)
Distributions of valence quarks in hadrons at small x in QCD, 10:40588 (R;SU)

PIONS MINUS
Particle Production
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Photoproduction
Cross-section assymmtry of π^+ and π^- meson single photoproduction on nucleons by polarized photons in the resonance energy range, 10:40512 (R;SU;In Russian)

PIONS NEUTRAL
Particle Production
New test of non-Abelian nature of QCD, 10:40568 (R;SU)

PIONS PLUS
Particle Production
Observation of correlations between backward-protons yield and relative yield of π^+/π^--mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Photoproduction
Cross-section assymmtry of π^+ and π^- meson single photoproduction on nucleons by polarized photons in the resonance energy range, 10:40512 (R;SU;In Russian)

PIPE FITTINGS
Pressure Drop
Analysis of pressure losses in bends for gas-solid flow (Pneumatic transport), 10:38744 (RA;US)

PIPELINES
Transport of methanol by pipeline, 10:38985 (R;US)
Interference
Utility corridor design: transmission lines, railroads, and pipelines. Volume 1. Engineering analysis and site study. Final report, 10:39106 (R;US)

PIPES
Failure Mode Analysis
Failure criteria used in a probabilistic fracture mechanics code, 10:39565 (R;US)
Response Functions
Implicit finite element structural dynamic formulation for long-duration accidents in reactor piping systems, 10:39146 (R;US)
Seismic Effects
Alternate procedures for the seismic analysis of multiply supported piping systems, 10:39244 (R;US)
Stress Analysis
Blowdown system vents and drains stress analysis, 10:39265 (R;US)

PITCHBLENDE
Isotope Dating
Age and origin of pitchblende from the Gunnar Deposit, Saskatchewan, 10:38822 (RA;CA)
Origin
Origin of pitchblende veins in the Union Island area, Great Slave Lake, Northwest Territories, 10:38825 (RA;CA)

PITCHES
Coking
Study of the coking mechanisms of coal tar pitches and its constituents for the purpose of formation of high-grade needle coke and development of in-situ-methods for technical production, 10:38663 (R;DE;In German)

PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS

PLANNING
Projected design of plants or equipment as well as projected human efforts.
Linear Programming
Existence of equilibrium prices for a simple planning model, 10:41091 (R;US)

PLANT CELLS
Cell Cultures
Microalgae and "in vitro" plant cells for the photosynthetic production of chemical products, 10:38998 (R;FR;In French)

PLANT FOSSILS
See FOSSILS

PLANTS
See also ALGAE
CONIFERS
HERBS
LEGUMINOSAE
Physiology
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40236 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40237 (R;MX;In Spanish)

PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS

PLASMA
See also COLD PLASMA
COLLISIONLESS PLASMA
HIGH-BETA PLASMA
HOT PLASMA
LASER-PRODUCED PLASMA
ROTATING PLASMA
SOLID-STATE PLASMA
Acceleration
Particle acceleration in space and laboratory plasmas, 10:40989 (R;GB)
Alfven Waves
Spectral properties of the kinetic Alfven wave in cylindrical tokamak geometry, 10:41000 (J;US)
Cyclotron Harmonics
Electron temperature and density measurements by harmonic electron cyclotron emissions from doublet-III tokamak plasma, 10:41005 (J;US)
Electric Fields
Ambipolarons: solitary wave solutions for the radial electric field in a plasma, 10:40964 (R;US)
Electron Temperature
Electron temperature and density measurements by harmonic electron cyclotron emissions from doublet-III tokamak plasma, 10:41005 (J;US)
Kinetic Equations
Finite orbit analysis for long wavelength modes in a plasma with a hot component, 10:40995 (J;US)
Plasma kinetic theory in action-angle variables, 10:40961 (R;US)
Kinetics
Structure of the magnetic equilibrium in the HBTX1A reversed field pinch, 10:40959 (R;GB)
Lower Hybrid Heating
Spectrum and propagation of lower-hybrid waves in a tokamak plasma, 10:41003 (J;US)
Magnetic Probes
Structure of the magnetic equilibrium in the HBTX1A reversed field pinch, 10:40959 (R;GB)
Magnetohydrodynamics
Spectral method for obtaining three-dimensional magnetohydrodynamic equilibria, 10:40976 (R;US)
Oscillations
Finite orbit analysis for long wavelength modes in a plasma with a hot component, 10:40995 (J;US)
Plasma Density
Electron temperature and density measurements by harmonic electron cyclotron emissions from doublet-III tokamak plasma, 10:41005 (J;US)
Reviews
Experimental research on toroidal devices at PPPL: 1960-1985, 10:41042 (R;US)

Solitons
Ambipolarons: solitary wave solutions for the radial electric field in a plasma, 10:40964 (R;US)
Thermal Radiation
Radiation of non-uniform plasma ball, 10:40972 (R;SU;In Russian)
Turbulence
Electron-acoustic mode, 10:40999 (J;US)

PLASMA (BLOOD)
See BLOOD PLASMA

PLASMA DIAGNOSTICS
Dye Lasers
Narrow band, near UV, high repetition rate laser induced fluorescence system for use as an edge diagnostic in fusion machines, 10:41022 (J;US)
Electron Emission
Using perpendicular electron cyclotron emission to diagnose the thermal-barrier electrons in a tandem mirror, 10:41015 (J;AT)
Excimer Lasers
Narrow band, near UV, high repetition rate laser induced fluorescence system for use as an edge diagnostic in fusion machines, 10:41022 (J;US)
Fluorescence Spectroscopy
Narrow band, near UV, high repetition rate laser induced fluorescence system for use as an edge diagnostic in fusion machines, 10:41022 (J;US)
Magnetic Probes
Research and development of an aimed magnetic lead current density-magnetic field diagnostic. Final report, 10:40960 (R;US)
Spectrometers
Electron temperature and density measurements by harmonic electron cyclotron emissions from doublet-III tokamak plasma, 10:41005 (J;US)
Streak Cameras
Technique for in situ calibration of an x-ray streak camera in the nanosecond regime using a high density Z-pinch, 10:40991 (J;US)
Streak Photography
Improved approach to characterizing and presenting streak camera performance, 10:40990 (R;US)
X-Ray Spectra
High energy x-ray diagnostics of short lived plasmas, 10:40974 (R;US)
X-Ray Spectrometers
Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy, 10:40994 (J;US)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DISRUPTION
Dissipation of magnetic energy during disruptive current termination, 10:40970 (R;JP)

PLASMA INSTABILITY
Inhibition
Magnetohydrodynamic equilibrium and stability of rotating field-reversed configurations with excluded multipole fields, 10:40996 (J;US)
Instability Growth Rates
Weibel instability in the spherical corona of a laser fusion target, 10:40997 (J;US)

PLASMA JETS
Relaxation
Turbulent relaxation of directional energy of supersonic plasma flows in a longitudinal magnetic field, 10:40968 (R;SU;In Russian)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA (QUARK)
See QUARK MATTER

PLASMA SCRAPE-OFF LAYER
Turbulence
Theory of resistivity-gradient-driven turbulence, 10:40975 (R;US)

PLASMA SIMULATION
Turbulence
Particle simulation of plasmas, 10:41023 (BA;SU;In Russian)

PLASMA WAVES
Harmonics
Saturation of plasma beat waves, 10:39823 (R;GB)
Saturation
Saturation of plasma beat waves, 10:39823 (R;GB)

PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS

PLASTIC SCINTILLATION DETECTORS
Attenuation
Reduction of reabsorption effects in scintillators by employing solutes with large stokes shifts, 10:40051 (J;NL)
Efficiency
Determination of the absolute efficiency of an organic scintillator for neutrons with energies between 0.5 and 800 MeV, 10:40053 (J;NL)
Sensitivity
Problems of detectable activities and rational measurement time, 10:39913 (RA;CS;In Slovak)

PLASTIC SCINTILLATORS
Performance
Light output as a function of ionization density for a scintillator on polysterene basis, 10:39993 (R;SU;In Russian)

PLATFORM MOUNTED NUCLEAR PLANT
See OFFSHORE NUCLEAR POWER PLANTS

PLATINUM
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)

PLATINUM 190
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Ion Temperature
Fast ion profiles during neutral beam and lower hybrid heating, 10:40980 (R;US)
Lower Hybrid Heating
Fast ion profiles during neutral beam and lower hybrid heating, 10:40980 (R;US)
Neutral Atom Beam Injection
Fast ion profiles during neutral beam and lower hybrid heating, 10:40980 (R;US)
Reviews
Princeton Large Torus (PLT), 10:40985 (RA;US)

PLUTONIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Measuring Methods
Confirmatory measurements of special nuclear materials, 10:38954 (R;US)
Neutron Transport Theory
Discrepancies in the critical parameters in the utilization of different sets of cross sections, 10:39182 (RA;BR;In Portuguese)
Nuclear Materials Management
Confirmatory measurements of special nuclear materials, 10:38954 (R;US)
Purification
Pyrochemical development at Rocky Flats for recovery and purification of plutonium, 10:38936 (BA;US)
Radiometric Analysis
Ce^{+3}- and Tb^{+3}-luminescence in glasses. Ce^{+3}-activated bulk silica and silica thin films. An α-particle detector based on a Ce^{+3}-activated silica thin film. A Ce^{+3}-Tb^{+3}-energy transfer in a high melting point phosphate glass, 10:39889 (R;FR)
Recovery
Pyrochemical development at Rocky Flats for recovery and purification of plutonium, 10:38936 (BA;US)

Solubility
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
Solvent Extraction
Chemistry of actinides and lanthanides. New extractants and separation methods, 10:38838 (R;FR)
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)
Sorption
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)

PLUTONIUM 239
Radiochemical Analysis
Plutonium in soil and surface air in Thailand, 10:40171 (R;TH;In Thai)
Radioecological Concentration
Plutonium in soil and surface air in Thailand, 10:40171 (R;TH;In Thai)
Radiological effluent and onsite area monitoring report for the Nevada Test Site, January 1984-December 1984, 10:40136 (R;US)

PLUTONIUM 239 TARGET
Neutron Reactions
Prompt neutron spectra for the energy range 10 keV - 3 MeV from ^{239}Pu and ^{233}U fission by thermal neutrons, 10:40780 (RA;XA)

PLUTONIUM 240
Fission Barrier
Semiclassical description of hot nuclear systems, 10:40802 (RA;FR)
Radiochemical Analysis
Plutonium in soil and surface air in Thailand, 10:40171 (R;TH;In Thai)
Radioecological Concentration
Plutonium in soil and surface air in Thailand, 10:40171 (R;TH;In Thai)

PLUTONIUM BROMIDES
Hydrolysis
Studies on the vapour phase hydrolysis of some lanthanide and actinide (III) bromides, 10:39703 (R;DE;In German)

PLUTONIUM DIOXIDE
Decontamination
Preliminary findings of the effect of surface finish and coatings on PuO_2 contamination hold-up and ease of decontamination in aqueous and non-aqueous media, 10:38867 (R;GB)
Production
Pu-238 fuel form activities, January 1-31, 1985, 10:38976 (R;US)
Surface Contamination
Preliminary findings of the effect of surface finish and coatings on PuO_2 contamination hold-up and ease of decontamination in aqueous and non-aqueous media, 10:38867 (R;GB)

PLUTONIUM NITRATES
Transport
Gas pressure in sealed sample cans concentrated plutonium nitrate, 10:38850 (R;US)

PLUTONIUM PRODUCTION REACTORS
See also N-REACTOR
Reactor Decommissioning
Decommissioning planning and the assessment of alternatives for the Hanford production reactors, 10:39370 (R;US)

PLUTONIUM RECYCLE
Economic Analysis
Individual economical value of plutonium isotopes and analysis of the reprocessing of irradiated fuel, 10:39121 (RA;BR;In Portuguese)
Nuclear fuel cycle. Considerations for a small nation, 10:38942 (RA;IL)
Environmental Impacts
Nuclear fuel cycle. Considerations for a small nation, 10:38942 (RA;IL)

PLZT
Ion Implantation
Photosensitivity and imaging characteristics of ion-implanted PLZT ceramics, 10:39624 (R;US)
Physical Radiation Effects
Photosensitivity and imaging characteristics of ion-implanted PLZT ceramics, 10:39624 (R;US)
Piezoelectricity
Classical piezoelectricity: is the theory complete, 10:39625 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

PNEUMATIC TRANSPORT
Pneumatic conveying activities, 10:39714 (R;GB)
Correlations
Analysis of dense phase gas-solid flow (Vertical dense phase gas-solid flow), 10:38743 (RA;US)
Mathematical Models
Analysis of dense phase gas-solid flow (Vertical dense phase gas-solid flow), 10:38743 (RA;US)
Coal-fluid properties study. Final report, 10:38742 (R;US)
Dilute, dense-phase and maximum solid-gas transport. Third quarterly report, 10:38749 (R;US)
Pressure Drop
Analysis of dense phase gas-solid flow (Vertical dense phase gas-solid flow), 10:38743 (RA;US)

PNL
See BATTELLE PACIFIC NORTHWEST LABORATORIES

POINT LEPREAU-1 REACTOR
St. John, New Brunswick, Canada
Capitalized Cost
Management of a 600 MW CANDU project to facilitate electricity export, 10:39135 (R;CA)
Construction
Nuclear plants and economic risk, 10:39142 (RA;CA)
Economic Analysis
Nuclear plants and economic risk, 10:39142 (RA;CA)
Nuclear Trade
Management of a 600 MW CANDU project to facilitate electricity export, 10:39135 (R;CA)
Reactor Commissioning
AECL's participation in the commissioning of Point Lepreau generating station unit 1, 10:39140 (R;CA)
Point Lepreau G.S. commissioning management experience, 10:39139 (R;CA)

POISEUILLE FLOW
See LAMINAR FLOW

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLARIZED BEAMS
Resonance
Possibilities of polarized protons in Sp anti p S and other high energy hadron colliders, 10:39805 (R;US)

POLICY
See ENVIRONMENTAL POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Rock-Fluid Interactions
Research highlights subsurface transport program. Physical-chemical mechanisms affecting transport of inorganic/organic microcontaminants in heterogeneous systems, 10:40183 (R;US)

POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES

POLONIUM 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)

POLONIUM 210
Alpha Spectroscopy
Quantitative determination of ^{210}Po in geochemical samples, 10:39648 (RA;CA)

POLYACETYLENES
Electronic Structure
Statics and adiabatic dynamics of nonlinear excitations in defected polyacetylene, 10:39617 (R;US)
POLYACRYLONITRILE
See ORGANIC POLYMERS
POLYCRYSTALS
Plasticity
Effective-cluster simulation of polycrystal plasticity, 10:39474 (R;US)
Positron Collisions
Positron annihilation and pressure-induced electronic s-d transition, 10:40465 (R;US)
POLYCYCLIC AROMATIC AMINES
Biological Effects
Measurement of unscheduled DNA synthesis in germ cells of the male mouse (Mus musculus), 10:40303 (R;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Hydrogenation
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)
POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS
POLYMER FLOODING
See MICROEMULSION FLOODING
POLYMERS
See also ORGANIC POLYMERS
SILICONES
Adsorption
Adsorbed polymers under flow. A stochastic dynamical system approach, 10:39690 (J;US)
Electronic Structure
New stochastic treatment of fermions with application to a double-chain polymer, 10:39599 (J;US)
Fermions
New stochastic treatment of fermions with application to a double-chain polymer, 10:39599 (J;US)
Lattice Field Theory
New stochastic treatment of fermions with application to a double-chain polymer, 10:39599 (J;US)
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYOXYMETHYLENES
Copolymerization
Iodine-initiated, solid-state copolymerization of tetraoxane with 1,3-dioxolane in the presence of methylal, 10:39597 (R;JP;In Japanese)
POLYSACCHARIDES
See also CELLOPHANE
Photosynthesis
Cultivation of micro-algae in closed tubular reactor, 10:38997 (R;FR;In French)
POLYTETRAOXANE
See ORGANIC POLYMERS
POLYTHIONATES
See OXYGEN COMPOUNDS
POLYTHIONIC ACIDS
See OXYGEN COMPOUNDS
POLYURETHANES
Mechanical Properties
Thermal and mechanical properties of polyurethane foams at cryogenic temperatures. Final report, 10:39598 (R;US)
Physical Properties
Thermal and mechanical properties of polyurethane foams at cryogenic temperatures. Final report, 10:39598 (R;US)
POLY(VINYLIDENE FLUORIDE)
See FLUORINATED ALIPHATIC HYDROCARBONS
POLYVINYLS
POLYVINYLS
Electron Spin Resonance
Development of ESR techniques for free radical dosimetry in electron beams, 10:39902 (RA;XA)
Piezoelectricity
Studies of the Bauer piezoelectric polymer gauge (PVF_2) under impact loading, 10:40095 (R;US)
POROUS MATERIALS
Fluid Flow
Adsorbed polymers under flow. A stochastic dynamical system approach, 10:39690 (J;US)
Study of two-phase concurrent flow of steam and water in an unconsolidated porous medium, 10:39757 (R;US)
Mass Transfer
Effect of a second-order rate of interphase mass transfer on advective/dispersive solute transport in porous media, 10:40392 (RA;US)
Two-Phase Flow
Study of two-phase concurrent flow of steam and water in an unconsolidated porous medium, 10:39757 (R;US)
PORTLAND CEMENT
Leaching
Leaching studies of low-level radioactive waste forms, 10:38872 (R;US)
POSITION INDICATORS
See DISPLACEMENT GAGES
POSITRON BEAMS
Production
Intense positron beams: linacs, 10:39830 (BA;US)
POSITRON COLLISIONS
Annihilation
Positron annihilation and pressure-induced electronic s-d transition, 10:40465 (R;US)
Diffusion
Positron diffusion in Si, 10:39605 (R;US)
POSITRON COMPUTED TOMOGRAPHY
Multiwire Proportional Chambers
HISPET project: state-of-the-art, 10:40225 (R;US)
Performance
Time-of-flight positron emission tomography (T.O.F. P.E.T.), 10:40214 (R;FR)
POSITRON-ELECTRON-PROTON STORAGE RING
See PEP STORAGE RINGS
POSITRONIUM
Observation of positronium in semiconductors irradiated by laser, 10:40451 (RA;SU;In Russian)
POSITRONS
Deep Inelastic Heavy Ion Reactions
Deep inelastic collisions of heavy ions and positron production at bombarding energies close to the Coulomb barrier, 10:40745 (RA;SU)
Lifetime
Spectrometer for positron lifetime measurement. Lifetimes of positrons in LiF and BaF, 10:39983 (RA;SU;In Russian)
Positron Channeling
Coherent bremsstrahlung from 10 GeV positrons in thin Si crystal, 10:40874 (R;SU;In Russian)
POSTULATED PARTICLES

GRAVITONS
HIGGS BOSONS
MAGNETIC MONOPOLES
QUARKS
Mass
Limits for supersymmetry from a comprehensive study of CERN missing-energy events, 10:40534 (R;US)
Particle Production
New particles and their experimental signatures, 10:40550 (RA;XC)
Photoproduction
New particles and two-photon physics, 10:40559 (R;DE)
Supersymmetry
Supersymmetric models without R parity, 10:40602 (R;GB)
POTABLE WATER
See DRINKING WATER
POTASSIUM
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)

POTASSIUM 40
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
POTASSIUM CARBONATES
Catalytic Effects
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
POTASSIUM CHLORIDES
Physical Radiation Effects
Thermo luminescence and related phenomena in X-irradiated ionic crystals, 10:39510 (RA;BR)
POTATO TUBERS
See POTATOES
POTATOES
Food Processing
Storage properties of irradiated potatoes and onions. Part of a coordinated programme on the Asian Regional Cooperative Project on Food Irradiation. Final report for the period 1 December 1980 - 31 August 1984, 10:40280 (R;XA)
Radurization
Storage properties of irradiated potatoes and onions. Part of a coordinated programme on the Asian Regional Cooperative Project on Food Irradiation. Final report for the period 1 December 1980 - 31 August 1984, 10:40280 (R;XA)
POWDER METALLURGY
High energy rate densification and forming of metal powders. Final report, 1 June 1963-1 June 1966, 10:39477 (R;US)
POWER DEMAND
Forecasting
Review and assessment of Bonneville Power Administration's Conservation/Load/Resource Modeling Process, 10:39410 (R;US)
POWER DISTRIBUTION
Computer Calculations
Development and test of the ZELT-3D computer code for unfolding power distributions using side reflector instrumentation signals, 10:39186 (RA;BR;In Portuguese)
Computer Codes
Development and test of the ZELT-3D computer code for unfolding power distributions using side reflector instrumentation signals, 10:39186 (RA;BR;In Portuguese)

Loss of Coolant
Reactor coolant pump shaft seal behavior during blackout conditions, 10:39286 (R;US)
Power Distribution
Development and test of the ZELT-3D computer code for unfolding power distributions using side reflector instrumentation signals, 10:39186 (RA;BR;In Portuguese)
Pumps
Reactor coolant pump shaft seal behavior during blackout conditions, 10:39286 (R;US)
Reactor Accidents
Removal of airborne particulate radioactivity under accident conditions, 10:39240 (R;DE)
Remote Control
Low power reactor for remote applications, 10:39157 (R;US)
Seals
Reactor coolant pump shaft seal behavior during blackout conditions, 10:39286 (R;US)
POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
Voltage-controlled power supplies in nuclear physics experimental arrangements, 10:39849 (RA;SU)
Construction
Report of the Accelerator Group: electrical engineering, 10:39877 (RA;ZA)
Design
Report of the Accelerator Group: electrical engineering, 10:39877 (RA;ZA)
POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also RANKINE CYCLE POWER SYSTEMS
SOLAR-ASSISTED POWER SYSTEMS
Competition
Recommended methods for analysis of competition among new and existing technologies for the electrical generation market. Integrated assessments and policy evaluations, 10:39404 (R;US)
Computers
Vector computer challenge, 10:39098 (RA;US)
Control Systems
Array processor applications in system operation, 10:39099 (RA;US)
Data Processing
Vector computer challenge, 10:39098 (RA;US)
Environmental Effects
Technical and environmental aspects of electric power transmission, 10:39102 (R;US)
Health Hazards
Technical and environmental aspects of electric power transmission, 10:39102 (R;US)
Simulation
Fabrication, interfacing and testing of a special purpose Power System Simulator. Final report, 10:39067 (R;US)
POWER TRANSMISSION
See also OVERHEAD POWER TRANSMISSION
UNDERGROUND POWER TRANSMISSION

Economic Analysis
Effect of heat rate data errors on economic dispatch, 10:39094 (RA;US)
POWER TRANSMISSION LINES
Birds
Radar, electro-optical, and visual methods of studying bird flight near transmission lines. Final report, 10:39104 (R;US)
Dielectric Materials
Materials research, 10:39065 (R;US)
Electric Cables
Design limits of oil/paper high-voltage direct-current cable. Final report, 10:39105 (R;US)
Electrical Insulation
Materials research, 10:39065 (R;US)
Environmental Effects
Technical and environmental aspects of electric power transmission, 10:39102 (R;US)
Health Hazards
Technical and environmental aspects of electric power transmission, 10:39102 (R;US)
Interference
Utility corridor design: transmission lines, railroads, and pipelines. Volume 1. Engineering analysis and site study. Final report, 10:39106 (R;US)
PRASEODYMIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Neutron Reactions
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)
PRASEODYMIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)
PRASEODYMIUM BROMIDES
Hydrolysis
Studies on the vapour phase hydrolysis of some lanthanide and actinide (III) bromides, 10:39703 (R;DE;In German)
PRASEODYMIUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
PREAMPLIFIERS
Design
Design of low-noise preamplifiers for some special applications in high energy experiments, 10:40039 (RA;SU)
Resistors
High-resistance low-noise resistor for spectrometers with a cooled semiconductor detector, 10:40089 (R;SU;In Russian)
PRECURSORS (DELAYED NEUTRON)
See DELAYED NEUTRON PRECURSORS
PRECURSORS (DELAYED NEUTRONS)
See DELAYED NEUTRON PRECURSORS
PRESSURE VESSELS
Crack Propagation
Life extension of components with high cumulative fatigue usage, 10:39498 (R;US)
Design
X-ray diffraction cell for Debye-Scherrer and Guinier (Huber) cameras at pressure and temperature, 10:40096 (R;US)
Eddy Currents
Vacuum vessel eddy current modeling for TFTR adiabatic compression experiments, 10:41040 (R;US)
Fracture Mechanics
Application of probabilistic fracture mechanics to the PTS issue, 10:39114 (R;US)
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiments TSE-5, TSE-5A, and TSE-6, 10:39129 (R;US)
Performance
Novel instrument for high-pressure research at ultra-high temperatures, 10:40091 (R;US)
Thermal Analysis
Thermal analysis of LOFT containment vessel penetrations S-5E and S-6A, 10:39217 (R;US)
Thermal Shock
Pressure vessel fracture studies pertaining to the PWR thermal-shock issue: experiments TSE-5, TSE-5A, and TSE-6, 10:39129 (R;US)
Transients
Thermal analysis of LOFT containment vessel penetrations S-5E and S-6A, 10:39217 (R;US)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRICES
Prior to June 1979, CHARGES was used.
Planning
Existence of equilibrium prices for a simple planning model, 10:41091 (R;US)
PRIMARY COOLANT CIRCUITS
See also COOLANT CLEANUP SYSTEMS
Data Processing
CANDU 600 primary heat transport system thermalhydraulic commissioning (NUCIRC, SOPHT codes), 10:39207 (R;CA)
Failure Mode Analysis
Fault location using digraph with application to boiling water reactor, 10:39319 (RA;HU)
Thermal Stresses
Analysis of stratified flow mixing, 10:39254 (R;US)
Water Chemistry
Monitoring of chemical contaminants in BWRs. Final report, 10:39111 (R;US)
PRINCETON LARGE TORUS
See PLT DEVICES
PRINTED CIRCUITS
Design
Printed wiring board process improvement. Final report, 10:39769 (R;US)
Machining
Printed wiring board process improvement. Final report, 10:39769 (R;US)
PROCESS CONTROL
Computer Codes
Aiming toward perfection with POBSYS, a new software system (Destructive analysis of LWBR irradiated fuel rods), 10:39147 (R;US)
PROCESS HEAT
See also SOLAR PROCESS HEAT
Fuel Substitution
Factors affecting the competitive position of natural gas in industrial process heat applications, 10:38802 (R;US)
PROCESSING (DATA)

PROLIFERATION
Cooperation
Non-proliferation and nuclear cooperation - accomplishments and challenges, 10:39388 (R;BE)
Safeguards
Nuclear power and the non-proliferation issue, 10:39392 (R;GB)
PROMETHIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)
PROMINENCES (SOLAR)
See SOLAR PROMINENCES
PROMPT NEUTRONS
Multiplicity
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{233}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)
Investigation of some approximation used in promptly emitted particle models, 10:40748 (RA;FR)
Prompt neutron multiplicities for the transplutonium nuclides, 10:40775 (R;US)
Neutron Spectra
Prompt neutron spectra for the energy range 10 keV - 3 MeV from ^{239}Pu and ^{233}U fission by thermal neutrons, 10:40780 (RA;XA)
PRONGS
See PARTICLE TRACKS
PROPANE
Data Compilation

PROPORTIONAL COUNTERS
See also HE-3 COUNTERS
MULTIWIRE PROPORTIONAL CHAMBERS
Data Acquisition Systems
Utilization of minicomputer in the radiocarbon analysis measurements, 10:40026 (RA;SU)
Performance
Use of a tissue-equivalent proportional counter for dose measurement and microdosimetric quantification of mixed radiation fields, 10:39886 (R;CA;FR)
Uses
Multicell proportional counter for the ^{136}Xe neutrinoless double beta-decay, 10:40014 (RA;SU;In Russian)
PROTACTINIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
PROTACTINIUM 231
Geochemistry
Geochemical behavior of protactinium 231 and its chosen geochemical analogue thorium in the biosphere, 10:38931 (R;SE)
PROTACTINIUM 233
Biological Half-Life
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Excretion
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
Intestinal Absorption
Metabolism and gastrointestinal absorption of neptunium and protactinium in adult baboons, 10:40264 (R;US)
Retention
Radioactivity studies. Progress report, April 30, 1984-June 1, 1985, 10:40275 (R;US)
PROTECTION
See SAFETY
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Performance Testing
Overview of Bureau of Mines hearing protection research, 10:38781 (RA;US)
PROTECTIVE COATINGS
Corrosion Resistance
Study of the corrosion of superalloys protected by coatings: role of impurities and stresses). Final report, 1 October 1984-1 October 1985, 10:39554 (R;FR;FR)
Decontamination
Decontamination, 10:40898 (RA;MX;In Spanish)
Deposition
Influence of erosion and redeposition processes on the lifetime of impurity control components: An assessment for TiC coatings, 10:39578 (J;US)
Erosion
Influence of erosion and redeposition processes on the lifetime of impurity control components: An assessment for TiC coatings, 10:39578 (J;US)
Physical Radiation Effects
Influence of erosion and redeposition processes on the lifetime of impurity control components: An assessment for TiC coatings, 10:39578 (J;US)
PROTEINS
See also METALLOPROTEINS
RHODOPSIN
DNA Sequencing
Corn storage protein: a molecular genetic model. Final report, 10:40203 (R;US)
PROTON BEAMS
Beam Dumps
Remote recovery of irradiated tensile samples incapsulated in Pb-Bi, 10:39861 (R;US)
Stability
Beam microwave instability in proton synchrotrons, 10:39809 (R;SU;In Russian)
PROTON DECAY RADIOISOTOPES
Mass
Masses of nuclides near the boundary of proton stability, 10:40764 (RA;SU;In Russian)
PROTON DETECTION
Dielectric Track Detectors
Solid-state track detector response to high-energy charged particles, 10:39938 (RA;CS;In Czech)
Thermoluminescent Dosemeters
Thermoluminescent detector response to high-energy charged particles, 10:39939 (RA;CS;In Czech)
PROTON PRECESSION MAGNETOMETERS
Magnetic Fields
Converter for weak magnetic field measuring by NMR method, 10:40077 (RA;SU;In Russian)
Stability
Microprocessor stabilizer of magnetic field on the base of NMR nutation probe, 10:39976 (RA;SU;In Russian)
Tuning
Automatic search-lock-track circuit of a nuclear magnetometer, 10:40080 (R;SU;In Russian)
PROTON REACTIONS
Angular Correlation
Measurement and analysis of the angular correlation in the reaction (p,2p) on ^{6}Li at the 47 and 70 MeV incident protons, 10:40696 (RA;SU;In Russian)

Differential Cross Sections
Structure of differential cross section of diffraction nuclear processes, 10:40741 (RA;SU;In Russian)
Direct Reactions
Description of double differential cross sections of reactions with complex particles in a formalism of multistage direct processes with account for the coalescence mechanism, 10:40738 (RA;SU;In Russian)
Elastic Scattering
Differential cross section of elastic N-N scattering in noneikonal approximation, 10:40673 (RA;SU;In Russian)
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
Fragmentation
Complete statistical treatment of heavy target fragmentation in high energy proton nucleus collisions, 10:40808 (RA;FR)
Inelastic Scattering
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)
Knock-Out Reactions
Interpretation of relation of ^{3}He and ^{4}He isotope production in ^{12}C nucleus fragmentation with the help of intranuclear cluster direct knock-out mechanism, 10:40688 (RA;SU;In Russian)
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)
Separable potentials for calculation of the cluster knock-out reactions by protons of intermediate energies, 10:40740 (RA;SU;In Russian)
Study on the secondary neutron and photon emission by charged particle, 10:40693 (RA;JP;In Japanese)
Particle Production
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Observation of correlations between backward-protons yield and relative yield of π^{+}/π^{-}-mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Pickup Reactions
^{6}Li(p,α)^{3}He reaction at 47,8-62,5 MeV energies, 10:40697 (RA;SU;In Russian)
Polarization
Polarization transfer in inelastic scattering and pionic models of the EMC effect, 10:40674 (R;US)
Polarized Beams
Microscopic analysis of ^{6}Li (p, vector p)g.s. and ^{6}Li (p, vector p') (2.18 MeV) analyzing powers at 25, 35, and 45 MeV, 10:40677 (J;US)
Quasi-Free Reactions
Measurement and analysis of the angular correlation in the reaction (p,2p) on ^{6}Li at the 47 and 70 MeV incident protons, 10:40696 (RA;SU;In Russian)
Spin Flip
Spin-flip (p,n) reactions on ^{26}Mg, ^{54}Fe, and ^{56}Fe at selected proton bombarding energies in the range of 17 to 25 MeV, 10:40708 (R;US)

PROTON SPECTRA
Anisotropy
Anisotropy ratio for proton inclusive production at 400 MeV/N, 10:40704 (RA;FR)

PROTON-ANTIPROTON INTERACTIONS
p anti p collider physics: summary talk, 10:40514 (R;US)
Annihilation
Charmonium spectroscopy in proton-antiproton annihilation, 10:40538 (R;NO)
p anti p annihilations at rest in hydrogen gas: report on preliminary results of the ASTERIX experiment at LEAR (Antiproton Stop Experiment with Trigger on Initial X-rays), 10:40501 (R;CH)
Strange particle production in anti PP annihilation processes, 10:40506 (R;US)
Elastic Scattering
Physics interest in wide angle scattering of hadrons at medium energies, 10:40579 (RA;DE)
Inclusive Interactions
Consequences of models for monojet events from Z boson decay, 10:40502 (R;DE)
Inelastic Scattering
Physics interest in wide angle scattering of hadrons at medium energies, 10:40579 (RA;DE)
Postulated Particles
Search for the xi(2220) at LEAR, 10:40508 (R;US)
Reviews
anti pp physics above 2GeV/c, 10:40580 (RA;DE)
Physics with protons, pions, antiprotons, 10:40577 (RA;DE)
Total Cross Sections
Total hadron interaction cross section growth, 10:40517 (R;SU;In Russian)
Y*Resonances
Investigation of the anti pp → xi (2220) → K/sub s/K/sub s/ reaction at LEAR, 10:40505 (R;US)

PROTONIUM
X-Ray Spectra
p anti p annihilations at rest in hydrogen gas: report on preliminary results of the ASTERIX experiment at LEAR, 10:40501 (R;CH)

PROTON-NEUTRON INTERACTIONS
Elastic Scattering
Measurement of np elastic scattering at high energies and very small momentum transfers, 10:40527 (R;SU)
Particle Production
New test of non-Abelian nature of QCD, 10:40568 (R;SU)

PROTON-NUCLEON INTERACTIONS
See also PROTON-NEUTRON INTERACTIONS
PROTON-PROTON INTERACTIONS
Optical Models
First order interpretation of optical potentials, 10:40859 (J;US)

PROTON-PROTON INTERACTIONS
Elastic Scattering
Physics interest in wide angle scattering of hadrons at medium energies, 10:40579 (RA;DE)
Inelastic Scattering
Physics interest in wide angle scattering of hadrons at medium energies, 10:40579 (RA;DE)
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Particle Production
Cross section growth of hadron-hadron interactions and its possible connection with glueball existence, 10:40571 (R;SU;In Russian)
New particles and their experimental signatures, 10:40550 (RA;XC)
New test of non-Abelian nature of QCD, 10:40568 (R;SU)
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Reviews
Physics with protons, pions, antiprotons, 10:40577 (RA;DE)
Spin Orientation
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Total Cross Sections
Total hadron interaction cross section growth, 10:40517 (R;SU;In Russian)

PROTONS
Particle Production
Analysis of cumulative proton angular distributions, 10:40511 (R;SU)
Estimate of hadron formation length in neutrino interactions, 10:40521 (R;SU;In Russian)
Observation of correlations between backward-protons yield and relative yield of $\pi i/\pi^{-}$-mesons in nucleus-nucleus collisions at 4.2 GeV/c momentum per nucleon, 10:40513 (R;SU;In Russian)
Weak Particle Decay
Do protons decay, 10:40539 (R;GB)

PROTOPLASTS
See PLANT CELLS

PROTOTYPE FAST REACTOR JAPAN
See MONJU REACTOR

PSI-3695 RESONANCES
Radiative Decay
Radiative decays of the psi' to all-photon final states, 10:40543 (R;US)
Radiative decays of the psi prime to all-photon final states, 10:40542 (R;US)
PUBLIC ATTITUDES
See PUBLIC OPINION
PUBLIC BUILDINGS
Geothermal Heating Systems
Utah State Prison Geothermal System, 10:39047 (J;US)
PUBLIC OPINION
Centers for Disease Control review panel's recommendations on health effects and epidemiological studies of operations at the Savannah River Plant, Aiken, South Carolina. Public comment and meeting report, 10:40265 (R;US)
PUERTO RICO
Water Supply
Planning report for the comprehensive appraisal of the groundwater resources of the North Coast Limestone Area of Puerto Rico, 10:40352 (R;US)
PUGET SOUND
Sedimentation
Sedimentation rates in Puget Sound from ^{210}Pb measurements, 10:40348 (R;US)
PULMONARY CANCER

Computer Codes
Utilization of Relap 4 computer code in the water experimental loop at IPEN (Instituto de Pesquisas Energeticas e Nucleares), 10:39123 (RA;BR;In Portuguese)
Construction
Advanced LWR program for small modularized plants. Final report, 10:39118 (R;US)
Containment Buildings
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)
Pretest predictions for the response of a 1:8-scale steel LWR containment building model to static overpressurization, 10:39356 (R;US)
Probabilistic fracture mechanics. Method and application to the steel containment shell of a PWR-type reactor, 10:39315 (R;DE;In German)
Probability based load factors for design of concrete containment structures, 10:39242 (R;US)
Response of a reactor building due to detonation of flat layered gas clouds, 10:39341 (R;DE;In German)
Control Rooms
Human factors engineering evaluation of an advanced control room, 10:39197 (RA;HU)
Critical Heat Flux
Thermal-hydraulic analysis of PWR cores in transient condition, 10:39126 (R;BR;In Portuguese)
Design Basis Accidents
Response of a reactor building due to detonation of flat layered gas clouds, 10:39341 (R;DE;In German)
Doppler Coefficient
Optimization of Doppler reactivity in thermal reactors, 10:39125 (RA;BR;In Portuguese)
Failure Mode Analysis
Application of probabilistic fracture mechanics to the PTS issue, 10:39114 (R;US)
Design evaluation of diagnostic method and display method for PWR plant computerized operator support system (COSS) in Japan, 10:39321 (RA;HU)
Feedwater
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)
Fuel Cans
CANSWEL-2: a computer model of the creep deformation of Zircaloy cladding under loss-of-coolant accident conditions, 10:39347 (R;GB)
Fuel Elements
Model to calculate the burn of gadolinium in PWR, 10:39122 (RA;BR;In Portuguese)
High Pressure Coolant Injection
Analysis of stratified flow mixing, 10:39254 (R;US)
Loss of Coolant
CANSWEL-2: a computer model of the creep deformation of Zircaloy cladding under loss-of-coolant accident conditions, 10:39347 (R;GB)
Probability of pipe failure in the reactor coolant loops of Babcock and Wilcox PWR plants. Volume 2. Guillotine break indirectly induced by earthquakes, 10:39361 (R;US)

Probability of pipe failure in the reactor coolant loops of Westinghouse PWR Plants. Volume 1. Summary report, 10:39354 (R;US)
Thermal and fluid mixing in a 1/2-scale test facility. Volume 2. Data report. Final report, 10:39291 (R;US)

Meltdown
Corium quench in deep pool mixing experiments, 10:39255 (R;US)

Neutron Dosimetry
Measurements of neutron dose and spectra inside reactor containment, 10:39365 (R;US)

Plutonium Recycle
Individual economical value of plutonium isotopes and analysis of the reprocessing of irradiated fuel, 10:39121 (RA;BR;In Portuguese)

Power Losses
Loss of offsite power in pressurized water reactors: a combined probabilistic and thermal-hydraulic analysis, 10:39285 (R;US)

Primary Coolant Circuits
Analysis of stratified flow mixing, 10:39254 (R;US)
Probability of pipe failure in the reactor coolant loops of Westinghouse PWR Plants. Volume 1. Summary report, 10:39354 (R;US)

Pumps
Effects of early pump trip on the time-to-core uncovery for a TMI-type accident, 10:39345 (R;US)

Radiation Protection
Concept and design of shielding for nuclear power plants with pressurized water reactors: application for a NUCLEN case, 10:39312 (RA;BR;In Portuguese)

Reactor Accidents
Effects of early pump trip on the time-to-core uncovery for a TMI-type accident, 10:39345 (R;US)

Reactor Control Systems
Design evaluation of diagnostic method and display method for PWR plant computerized operator support system (COSS) in Japan, 10:39321 (RA;HU)

Reactor Cores
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)

Reactor Instrumentation
Accuracy and the accident qualification of a subcooled margin monitor for PWRs, 10:39327 (RA;HU)

Reactor Materials
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)

Reactor Physics
Proceedings of the 4th. Brazilian Meeting on Reactor Physics, 10:39124 (R;BR;In Portuguese)

Reactor Protection Systems
PWR plant diagnosis method by reference models, 10:39322 (RA;HU)

Reactor Safety
Accuracy and the accident qualification of a subcooled margin monitor for PWRs, 10:39327 (RA;HU)
German offsite accident consequence model for nuclear facilities: further development and application, 10:39299 (RA;US)
Introduction of accidental procedures in the Event Trees of the 900 MW PWR PRA, 10:39298 (RA;US)
Time-dependent unavailability analysis - applications to safety systems, 10:39297 (RA;US)

Reactor Simulators
PWR plant diagnosis method by reference models, 10:39322 (RA;HU)

Rod Ejection Accidents
TITAN: an advanced three-dimensional coupled neutronic/thermal-hydraulics code for light water nuclear reactor core analysis, 10:39346 (R;US)

Safety Engineering
Accuracy and the accident qualification of a subcooled margin monitor for PWRs, 10:39327 (RA;HU)

Shielding
Concept and design of shielding for nuclear power plants with pressurized water reactors: application for a NUCLEN case, 10:39312 (RA;BR;In Portuguese)

Simulation
Utilization of Relap 4 computer code in the water experimental loop at IPEN (Instituto de Pesquisas Energeticas e Nucleares), 10:39123 (RA;BR;In Portuguese)

Steam Generators
Analysis of experimental data on condensation in an inverted U-tube. Final report, 10:39300 (R;US)

Thermal Shock
Thermal and fluid mixing in a 1/2-scale test facility. Volume 1. Facility and test design report. Final report, 10:39117 (R;US)

Transients
Analytical modeling techniques for efficient heat transfer simulation in nuclear power plant transients, 10:39241 (R;US)
Thermal-hydraulic analysis of PWR cores in transient condition, 10:39126 (R;BR;In Portuguese)

PYRENE

Biological Effects
Measurement of unscheduled DNA synthesis in germ cells of the male mouse (Mus musculus), 10:40303 (R;US)

Hydrogenation
Catalyst deactivation in direct coal liquefaction processes: a quantitative approach to understanding the rate of activity loss, 10:38707 (R;US)

PYRIDINE

Solvent Properties
Macromolecular chemistry of coalification. Quarterly report, February 1-April 31, 1985, 10:38697 (R;US)

PYRITE
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 1, 10:38760 (R;US)
Investigation of pyrite as a contributor to slagging in eastern bituminous coals. Final report. Part 2, 10:38761 (R;US)

PYRITES
See PYRITE

PYROLYSIS

Research Programs
Coal research projects: properties, conversion and combustion, 10:38720 (R;GB)

PYRROLIDONES

Solvent Properties
Macromolecular chemistry of coalification. Quarterly report, February 1-April 31, 1985, 10:38697 (R;US)

PZT

Phase Transformations
Shock recovery experiments on PZT 95/5, 10:39623 (R;US)

Piezoelectricity
Classical piezoelectricity: is the theory complete, 10:39625 (R;US)

Q

Q DEVICES

Cyclotron Instability
Can the electrostatic ion-cyclotron instability be driven by a two-dimensional sheath, 10:41020 (J;GB)
Electrostatic ion-cyclotron instability driven by a slow electron drift, 10:41021 (J;GB)

Electron Drift
Can the electrostatic ion-cyclotron instability be driven by a two-dimensional sheath, 10:41020 (J;GB)
Electrostatic ion-cyclotron instability driven by a slow electron drift, 10:41021 (J;GB)

Ion Wave Instability
Can the electrostatic ion-cyclotron instability be driven by a two-dimensional sheath, 10:41020 (J;GB)
Electrostatic ion-cyclotron instability driven by a slow electron drift, 10:41021 (J;GB)

QUANTITATIVE CHEMICAL ANALYSIS
See also RADIOMETRIC ANALYSIS

Absorption Spectroscopy
Lens and Wedge Absorption Cells for FT-IR spectroscopy, 10:39684 (J;US)
Optimization of sample absorbance for quantitative analysis in the presence of pathlength error in the IR and NIR regions, 10:39685 (J;US)
Infrared Spectra
Lens and Wedge Absorption Cells for FT-IR spectroscopy, 10:39684 (J;US)
Optimization of sample absorbance for quantitative analysis in the presence of pathlength error in the IR and NIR regions, 10:39685 (J;US)

QUANTUM CHROMODYNAMICS
Bag Model
Confinement criterion for QCD with dynamical quarks, 10:40560 (R;DE)
Gluons
Six- and eight-dimensional gluon condensates from lattice QCD, 10:40628 (R;SU)
Perturbation Theory
Status of perturbative QCD, 10:40642 (BA;GB)
Propagator
Nonperturbative propagators in quantum chromodynamics, 10:40639 (J;US)
Sum Rules
QCD sum rules of the finite energy type, 10:40592 (R;SU;In Russian)

QUANTUM ELECTRODYNAMICS
See also SCHWINGER-TOMONAGA FORMALISM
Algorithms
New stochastic algorithm and its application to compact QED, 10:40640 (J;US)
Gauge Invariance
Formulation of euclidean QED manifestly obeying conditions of gauge, translational and rotational invariance, 10:40627 (R;SU)
Magnetic Monopoles
Monopole-fermion and dyon-fermion bound states. Pt. 5, 10:40561 (R;DE)
Radiative Corrections
Testing the standard model via radiative corrections, 10:40622 (RA;DE)
Rotational Invariance
Formulation of euclidean QED manifestly obeying conditions of gauge, translational and rotational invariance, 10:40627 (R;SU)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
PHI4-FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
QUANTUM GRAVITY
Chiral Symmetry
Hybrid model of the chiral field and relativistic string, 10:40632 (R;SU;In Russian)
Quantization
Stochastic quantization of Abelian fields, 10:40630 (R;SU;In Russian)
Stochastic quantization of gauge theories, 10:40635 (R;DD)
Stochastic quantization and supersymmetry, 10:40634 (R;DD)
String Models
Hybrid model of the chiral field and relativistic string, 10:40632 (R;SU;In Russian)

QUANTUM GRAVITY
Gauge Invariance
Classical geometrical interpretation of ghost fields and anomalies in Yang-Mills theory and quantum gravity, 10:40637 (R;US)

QUANTUM MECHANICS
Many-Body Problem
Approximation scheme for the quantum Liouville equation using phase-space distribution functions, 10:40947 (J;US)

QUARK CONFINEMENT
See BAG MODEL

QUARK MATERIAL
See QUARK MATTER

QUARK MATTER
Antibaryons
Can antibaryons signal the formation of a quark-gluon plasma, 10:40795 (R;US)
Equations of State
Effect of hadrons multiple production on the thermodynamics of matter at ultrarelativistic temperatures, 10:40589 (R;SU;In Russian)
Particle Production
Dilepton production from quark gluon plasma using non-equilibrium thermodynamics, 10:40549 (RA;FR)
Phase Transformations
Can antibaryons signal the formation of a quark-gluon plasma, 10:40795 (R;US)
Strangeness
K meson-nucleus interactions: strangeness and nuclear matter, 10:40796 (R;US)

QUARK PLASMA
See QUARK MATTER

QUARK SEA
See QUARK MATTER

QUARK-ANTIQUARK INTERACTIONS
Bound State
Bound states of heavy Q^2Q^2 systems, 10:40603 (J;US)

QUARK-GLUON PLASMA
See QUARK MATTER

QUARKS
Nuclear Structure
Quarks, bags and the nucleon-nucleon interaction, 10:40858 (J;US)
Pair Production
Intrinsic Chevrolets at the SSC, 10:40557 (R;US)
Particle Decay
Jet production and quark fragmentation results from PEP, 10:40547 (BA;GB)
Spectra
Light quark spectroscopy, 10:40605 (BA;GB)
Spectroscopy
Light quark spectroscopy, 10:40605 (BA;GB)

QUARTZ
Acoustic Measurements
Elastic wave velocities in quartz monzonite at different levels of water saturation, 10:40386 (RA;US)
Health Hazards
Health hazard evaluation report HETA 81-472-1380, Pennsylvania Power and Light, Martins Creek Steam Electric Station, Martins Creek, Pennsylvania, 10:38782 (R;US)

QUASARS
Star Accretion
Two-phase accretion model for emission-line regions in quasars and active galactic nuclei, 10:40420 (J;US)

QUASIPARTICLE-PHONON MODEL
Excited States
Fragmentation of simple nuclear excitations, 10:40840 (RA;SU;In Russian)
Giant Resonance
Fragmentation of simple nuclear excitations, 10:40840 (RA;SU;In Russian)

QUATERNARY COMPOUNDS
For quaternary ammonium compounds.
Solitons
Narrow and broad solitons in the antiferromagnetic chains of $CsCoCl_3$ and TMMC, 10:39606 (R;FR)

QUINOLINES
Hydrogenation
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)

R

R CODES
Manuals
REPREL computer code: users guide, 10:38949 (R;US)
R (EXPOSURE UNIT)
See RADIATION DOSE UNITS
RACIAL GROUPS
See MINORITY GROUPS
RAD
See RADIATION DOSE UNITS
RADAPPERTIZATION
See RADIOSTERILIZATION
RADIATION ACCIDENTS
Alarm Systems
Design criteria and principles for criticality detection and alarm systems, 10:39735 (R;GB)
Emergency Plans
Planning concepts and decision criteria for sheltering and evacuation in a nuclear power plant emergency. Executive report, 10:39239 (R;US)
RADIATION BURDEN
See RADIATION DOSES
RADIATION CHEMISTRY
Bibliographies
Radiation effects on living systems. A bibliography of AECL publications, 10:40261 (R;CA)
Research Programs
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute (No. 16). April 1, 1982-March 31, 1983, 10:39699 (R;JP)
RADIATION CURING
Prior to December 1982 this concept was indexed by the coordination of CHEMICAL RADIATION EFFECTS and CROSS-LINKING.
Irradiation Procedures
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
Process Control
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
RADIATION DAMAGE (BIOLOGICAL)
See RADIATION INJURIES
RADIATION DECONTAMINATION
See DECONTAMINATION
RADIATION DETECTION
See also CHARGED PARTICLE DETECTION
COSMIC RAY DETECTION
GAMMA DETECTION
NEUTRINO DETECTION
NEUTRON DETECTION
Li-Drifted Ge Detectors
Practical aspects of use of Ge-based detectors in analysis of large-volume samples, 10:39948 (RA;CS;In Czech)
RADIATION DETECTORS
See also CHERENKOV COUNTERS
DIELECTRIC TRACK DETECTORS
EMANOMETERS
GRAVITATIONAL WAVE DETECTORS
IONIZATION CHAMBERS
NEUTRON DETECTORS
PROPORTIONAL COUNTERS
RADIOMETERS
SCINTILLATION COUNTERS
SHOWER COUNTERS
SPARK COUNTERS
STREAK CAMERAS
Photocathodes
Re-evaluation of the temporal response of CsI photocathodes, 10:40056 (J;US)
Planning
Nuclear physics and nuclear instrumentation, 10:40665 (RA;MX;In Spanish)
Response Functions
Improved model of electron interaction with matter to be used for calculation of detector's response function, 10:39968 (RA;AT)
RADIATION DOSE UNITS
For studies concerning units, concepts or definitions.
Units and magnitudes used in radiological protection, 10:40896 (RA;MX;In Spanish)
RADIATION DOSEMETERS
See DOSEMETERS
RADIATION DOSES
Coordinated Research Programs
Health physics research abstracts No. 11, 10:40278 (R;XA)
Thermoluminescent Dosimetry
Reassessment of radiation doses measured by TLD, 10:39955 (RA;IL)
RADIATION DOSIMETRY
See DOSIMETRY
RADIATION EXPOSURE (DOSES)
See RADIATION DOSES
RADIATION HARDENING
Radiation effects hardening techniques, 10:40060 (R;US)
RADIATION HYGIENE
See RADIATION PROTECTION
RADIATION INJURIES
Reviews
Radionuclide injury to the lung, 10:40301 (J;US)
RADIATION PROTECTION
Optimization
Recent recommendations on radiological protection standards in Israel, 10:40895 (RA;IL)
Recommendations
Basic standard for radiological protection, 10:40897 (RA;MX;In Spanish)
Regulatory Guides
Guide for the preparation of applications for licenses for the use of radioactive materials in servicing preregistered gauges, measuring devices, and sealed sources used in such devices. Draft, 10:40046 (R;US)
Research Programs
Report of the Pretoria Cyclotron Group, 10:39879 (RA;ZA)
Safety Standards
Recent recommendations on radiological protection standards in Israel, 10:40895 (RA;IL)
Standards
List of foreign standards in nuclear technology, 10:40900 (R;CS;In Czech)
RADIATION PROTECTION LAWS
Health (Radiation Safety) Act 1983 (Victoria) No. 9889 of 17 May 1983, 10:40906 (R;XA)
Health (Radiation Safety) Regulations 1984 (Victoria), No. 191 of 8 May 1984, 10:40907 (R;XA)
Health (Radiation Safety) (Amendment) Regulations 1984 (Victoria) No. 236 of 10 July 1984, 10:40910 (R;XA)
Order of the Ministry of Labour of 9 March 1971 on health and safety at work. General Ordinance, 10:40911 (R;XA;In Spanish)
Radiation Safety (Qualifications) Regulations 1980, 10:40905 (R;XA)
Radiation Safety (General) Regulations 1983 (Western Australia), 10:40908 (R;XA)
Radiation Safety (Qualifications) Amendment Regulations 1984, 10:40909 (R;XA)
Sim and Ritchie's summary of the law relating to atomic energy and radioactive substances, 10:41100 (R;GB)
RADIATION SAFETY
See RADIATION PROTECTION
RADIATION SOURCES
For cosmic sources of radiation see also COSMIC GAMMA SOURCES, COSMIC RADIO SOURCES, and COSMIC X-RAY SOURCES.
See also GAMMA SOURCES
Dosimetry
Research in radiation processing dosimetry. Final report of the co-ordinated research programme on high-dose standardization and intercomparison for industrial radiation processing organized by the IAEA and proceedings of the final research co-ordination meeting held in Munich, 8-11 November 1983, 10:40893 (R;AT)
Standards
List of foreign standards in nuclear technology, 10:40900 (R;CS;In Czech)

RADIATION TRANSPORT
See also CHARGED-PARTICLE TRANSPORT
NEUTRAL-PARTICLE TRANSPORT
Computer Codes
Study and application of Morse computer code in radiation shielding problems, 10:40868 (RA;BR;In Portuguese)
RADIATIVE DECAY
Lectures
Radiative weak decays, 10:40574 (RA;DE)
RADICALS
Not to be used for compound descriptions.
See also HYDROXYL RADICALS
Microwave Spectra
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
RADIOACTIVE AEROSOLS
Diffusion
Data of very low wind velocity and of air tracer concentration in the diffusion experiments under very stable condition. September 1976-October 1981, 10:40142 (R;JP;In Japanese)
Sensitivity, applicability and validation of bi-Gaussian off- and on-line models for the evaluation of the consequences of accidental releases in nuclear facilities (CAERS code), 10:40139 (R;XE)
Radioactivity Transport
Removal of airborne particulate radioactivity under accident conditions, 10:39240 (R;DE)
RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES
RADIOACTIVE GASEOUS WASTES
See GASEOUS WASTES

RADIOACTIVE WASTE DISPOSAL
In situ gaseous tracer diffusion experiments and predictive modeling at the Greater Confinement Disposal Test (Augered shaft disposal in alluvium), 10:38878 (R;US)
Backfilling
Backfilling and sealing of radioactive waste repositories. Vol. 1. Text - Reference - List of symbols, 10:38886 (R;XE)
Backfilling and sealing of radioactive waste repositories. Vol. 2. Figure - Tables - Appendices, 10:38887 (R;XE)
Environmental Impacts
ECOS: sorption, dose, consumption and miscellaneous data values, 10:38938 (R;GB)
Evaluation
Preliminary evaluation of criteria for the disposal of transuranic contaminated waste, 10:38877 (R;US)
Feasibility Studies
Feasibility studies and conceptual design for placing steel liner in long, horizontal boreholes for a prospective nuclear waste repository in tuff, 10:38928 (R;US)
Marine Disposal
Ocean disposal of heat generating radioactive waste. Container design study, 10:38917 (R;GB)
Meetings
Computer modelling of stresses in rock. Proceedings of a technical session, 10:38890 (R;XE)
Proceedings of a technical session on rock mechanics "Advance in laboratory sample testing", 10:38882 (R;XE)
Packaging
Parametric testing of a DWPF glass, 10:38934 (R;US)
Public Opinion
Response to state comments on the draft regional characterization reports for the Crystalline Repository Project, 10:38876 (R;US)
Radiation Monitoring
Ratio methods for cost-effective field sampling of commercial radioactive low-level wastes, 10:38915 (R;US)
Radiation Protection
Disposal facilities on land for low and intermediate-level radioactive wastes: draft principles for the protection of the human environment, 10:38896 (R;GB)
Proposed risk acceptance criterion for nuclear fuel waste disposal, 10:38866 (R;CA)

Radionuclide Migration
Equilibrium leach testing of Magnox fuel cladding residues, 10:38868 (R;GB)
REPREL computer code: users guide, 10:38949 (R;US)
Risk Assessment
Determining probabilities of geologic events and processes, 10:38929 (R;US)
LISA. A code for safety assessment in nuclear waste disposals program description and user guide, 10:38889 (R;XE)
Proposed risk acceptance criterion for nuclear fuel waste disposal, 10:38866 (R;CA)
Rock Mechanics
Computer modelling of stresses in rock. Proceedings of a technical session, 10:38890 (R;XE)
Site Selection
Demonstration of an initial screening phase for site selection for low level radioactive waste burial - an evaluation of relevant IAEA guidelines, 10:38864 (R;AU)
Minerals in fractures of the unsaturated zone from drill core USW G-4, Yucca Mountain, Nye County, Nevada, 10:38903 (R;US)
Response to state comments on the draft regional characterization reports for the Crystalline Repository Project, 10:38876 (R;US)
Underground Disposal
Connectivity, flow and transport in network models of fractured media, 10:38871 (R;GB)

RADIOACTIVE WASTE FACILITIES
Disposal facilities on land for low and intermediate-level radioactive wastes: draft principles for the protection of the human environment, 10:38896 (R;GB)
Cooling Systems
Retrieval effects on ventilation and cooling requirements for a nuclear waste repository, 10:38874 (R;US)
Pilot Plants
Implementation of thermal/structural interactions in situ tests at the Waste Isolation Pilot Plant facility, 10:38926 (R;US)
Site Selection
Risk and prior compensation in siting low-level nuclear waste facilities. Dealing with the NIMBY syndrome, 10:38894 (RA;CA)
Specifications
Intermediate-Level Waste Treatment Facility in the Tokai Research Establishment, 10:38900 (R;JP;In Japanese)
Temperature Effects
Implementation of thermal/structural interactions in situ tests at the Waste Isolation Pilot Plant facility, 10:38926 (R;US)
Ventilation Systems
Retrieval effects on ventilation and cooling requirements for a nuclear waste repository, 10:38874 (R;US)

RADIOACTIVE WASTE MANAGEMENT
Research Programs
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)
Safety
Decision in principle of 10 November 1983 on the objectives to be observed in carrying out research, surveys and planning in the field of nuclear waste management (Finland), 10:38897 (R;XA)
Technology Utilization
Recommended safety, reliability, quality assurance and management aerospace techniques with possible application by the DOE to the high-level radioactive waste repository program, 10:38916 (R;US)
Transmission Electron Microscopy
Applications of transmission electron microscopy in nuclear waste management, 10:38895 (RA;CA)

RADIOACTIVE WASTE PROCESSING
Cements
Fixation of liquid radioactive wastes by cements, 10:38893 (RA;CS;In Slovak)
Filtration
Assessment of filter aids and filter cloths in the dewatering of intermediate level wastes, 10:38869 (R;GB)
Inorganic Ion Exchangers
Retention of ^{60}Co, ^{90}Sr and ^{137}Cs on inorganic ion exchangers, 10:38892 (R;FR;In French)
Research Programs
Defense waste and byproducts management monthly report, 10:38924 (R;US)
Defense waste and byproducts management monthly report, 1985, 10:38925 (R;US)
Solidification
Equilibrium leach testing of Magnox fuel cladding residues, 10:38868 (R;GB)
Water Removal
Assessment of filter aids and filter cloths in the dewatering of intermediate level wastes, 10:38869 (R;GB)

RADIOACTIVE WASTE STORAGE
After-Heat Removal
Interim storage of solidified fission products from fuel element reprocessing with utilization of obtaining post-decay heat, 10:38851 (R;DE;In German)
Planning
Transuranic waste: long-term planning, 10:38935 (R;US)
Research Programs
Defense waste and byproducts management monthly report, 10:38924 (R;US)
Defense waste and byproducts management monthly report, 1985, 10:38925 (R;US)
Tanks
Prediction equations for corrosion rates of a A-537 and A-516 steels in Double Shell Slurry, Future PUREX, and Hanford Facilities Wastes, 10:38922 (R;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
INTERMEDIATE-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
Electrorefining
Pyrochemical development at Rocky Flats for recovery and purification of plutonium, 10:38936 (BA;US)
Materials Handling
DOE approach to threshold quantities, 10:38880 (R;US)
Solidification
Fixation of liquid radioactive wastes by cements, 10:38893 (RA;CS;In Slovak)

PROTON DECAY RADIOISOTOPES
Gamma Spectroscopy
Activity determination of natural radionuclides in large-volume samples by semiconductor gamma spectrometry, 10:39933 (RA;CS;In Czech)
Definition of quality criterions for the test of softwares used in gamma spectrometry: identification and dosage of radionuclides in a complex mixture, 10:39646 (R;FR;In French)
Inventories
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
Ion Beams
Sources of radioactive ions, 10:39865 (R;US)
Ion Sources
Sources of radioactive ions, 10:39865 (R;US)
Licenses
Guide for the preparation of applications for licenses for the use of radioactive materials in servicing preregistered gauges, measuring devices, and sealed sources used in such devices. Draft, 10:40046 (R;US)
Production
Radioisotopes and radiations program. Contribution to the technological development (Argentina), 10:38973 (R;AR;In Spanish)
Uses
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40236 (R;MX;In Spanish)
International training course on the use of radiation and isotopic techniques in soil-plant relationships, 3 November-11 December 1981, 10:40237 (R;MX;In Spanish)
RADIOLOGICAL PROTECTION
See RADIATION PROTECTION
RADIOMETERS
On-Line Measurement Systems
Autonomical programmed system of the radiometrical probe, 10:40025 (RA;SU)
RADIOMETRIC ANALYSIS
Data Processing
Methods of evaluating small sets of results of radioanalytical methods 3, 10:39661 (RA;CS;In Czech)
RADIOMETRIC GAGES
Licenses
Guide for the preparation of applications for licenses for the use of radioactive materials in servicing preregistered gauges, measuring devices, and sealed sources used in such devices. Draft, 10:40046 (R;US)
Shielding
Use of low-background shielding covers in radionuclide analysis, 10:39964 (RA;CS;In Slovak)
RADIONUCLIDE DISTRIBUTIONS
See RADIONUCLIDE KINETICS
RADIONUCLIDE KINETICS
For radionuclides in living organisms only; see also TRANSLOCATION.
Coordinated Research Programs
Health physics research abstracts No. 11, 10:40278 (R;XA)
Mathematical Models
Further developments on improved metabolic models for uranium metabolism in man, 10:40271 (RA;US)
RADIONUCLIDE METABOLISM
See RADIONUCLIDE KINETICS
RADIONUCLIDE MIGRATION
In environment.
Preliminary assessment of radionuclide vapor phase transport in unsaturated tuff, 10:38950 (R;US)
Computerized Simulation
Analytical solutions to the three-dimensional radionuclide transport equation for computer code verification, 10:38870 (R;GB)
REPREL computer code: users guide, 10:38949 (R;US)
Coordinated Research Programs
CEC coordinated project MIRAGE MIgration of RAdionuclides in the GEosphere, 10:38940 (R;XE)
Mathematical Models
In situ gaseous tracer diffusion experiments and predictive modeling at the Greater Confinement Disposal Test, 10:38878 (R;US)
Sensitivity Analysis
Parameter-sensitivity analysis of near-field radionuclide transport in buffer material and rock for an underground nuclear fuel waste vault, 10:38937 (R;CA)
Three-Dimensional Calculations
Analytical solutions to the three-dimensional radionuclide transport equation for computer code verification, 10:38870 (R;GB)
Tracer Techniques
In situ gaseous tracer diffusion experiments and predictive modeling at the Greater Confinement Disposal Test, 10:38878 (R;US)
RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIONUCLIDE TRANSFER (IN ORGANISMS)
See RADIONUCLIDE KINETICS
RADIONUCLIDE TURNOVER

RADIONUCLIDES
See RADIOISOTOPES
RADIOPHARMACEUTICALS
Biological Localization
Pancreas accumulation of radioiodinated HIPDM in mice and rats, 10:40228 (J;US)
Chemical Preparation
Myocardial imaging agents: synthesis, characterization, and evaluation of (Z)- and (Z,E)-18-^{83}Brbromo-5-tellura-17-octadecenoic acids, 10:39708 (J;US)
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
Evaluation
Myocardial imaging agents: synthesis, characterization, and evaluation of (Z)- and (Z,E)-18-^{83}Brbromo-5-tellura-17-octadecenoic acids, 10:39708 (J;US)
Isotope Production
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
Production
Production of ^{67}Ga at the Oslo Cyclotron, 10:39706 (R;NO)
Quality Control
Results of quality control studies of technetium 99m labelled radiopharmaceuticals prepared from kits (1980-81), 10:40217 (R;CA)
Tissue Distribution
Pancreas accumulation of radioiodinated HIPDM in mice and rats, 10:40228 (J;US)
Uses
Radionuclide usage survey 1979-80. Final report, 10:40226 (R;GB)
RADIOSTERILIZATION
Irradiation Procedures
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
Process Control
Radiation process control, study and acceptance of dosimetric methods, 10:38974 (RA;XA)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
See also NEUTRON THERAPY

Dosimetry
Accuracy and precision of dosimetry required for radiotherapy and atomic, molecular and nuclear data affected on accuracy, 10:40221 (RA;JP;In Japanese)
Radiation Doses
Accuracy and precision of dosimetry required for radiotherapy and atomic, molecular and nuclear data affected on accuracy, 10:40221 (RA;JP;In Japanese)
Thermoluminescent Dosimetry
Thermoluminescent dosimetry in radiation therapy, 10:40219 (RA;HU)

RADIUM 226
Measuring Methods
Scintillation detector for ^{226}Ra measurement in waters, 10:39954 (RA;CS;In Czech)

RADIUM D
See LEAD 210

RADIUM F
See POLONIUM 210

RADON 222
Radiation Monitoring
Some problems of simultaneous integral determination of specific activity of radon daughters, 10:40140 (RA;CS;In Czech)

RADON MONITORS
See EMANOMETERS

RAIL TRANSPORT
Noise Pollution Control
Mantrip noise controls, 10:38776 (RA;US)

RAILGUN ACCELERATORS
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor refueling, 10:41048 (J;US)
Power Supplies
Railgun power supply system utilizing traction motors and vacuum interrupters, 10:39782 (R;US)

RAILWAYS
Interference
Utility corridor design: transmission lines, railroads, and pipelines. Volume 1. Engineering analysis and site study. Final report, 10:39106 (R;US)

RAIN WATER
Chemical Analysis
Associations and mesoscale spatial relationships among rainwater constituents, 10:40192 (J;US)
Chemical Composition
Rainfall quality at selected sites in Saudi Arabia, 10:40133 (R;US)
Sampling
Associations and mesoscale spatial relationships among rainwater constituents, 10:40192 (J;US)

RAJASTHAN-1 REACTOR
Kota, Rajasthan, India
Computerized Control Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)
Data Acquisition Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)

RAJASTHAN-2 REACTOR
Kota, Rajasthan, India
Computerized Control Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)
Data Acquisition Systems
Use of computers for operator information systems and controls in Indian nuclear power plants, 10:39203 (RA;HU)

RANA
See FROGS

RANGELANDS
Ecological Succession
Estimating postfire changes in production and value of northern Rocky Mountain-Intermountain rangelands. Final report, 10:40176 (R;US)
Resource Management
Estimating postfire changes in production and value of northern Rocky Mountain-Intermountain rangelands. Final report, 10:40176 (R;US)

RANKINE CYCLE POWER SYSTEMS
A comparative economic analysis of a solar-powered/fuel-assisted hybrid Rankine system, 10:39017 (BA;US)

RAPS-1 REACTOR
See RAJASTHAN-1 REACTOR

RAPS-2 REACTOR
See RAJASTHAN-2 REACTOR

RARE EARTH ALLOYS
See also CERIUM ALLOYS
YTTERBIUM ALLOYS
Crystal Field
Crystal field and magnetocrystalline anisotropy in various crystalline systems, 10:40450 (R;RO;In Romanian)

RARE GAS COMPOUNDS
Van der Waals Forces
Multiphoton ionization of NO-rare gas van der Waals species, 10:40438 (R;US)

RATEMETERS (DOSE)
See DOSE RATEMETERS

REACTOR ACCIDENTS
See also DESIGN BASIS ACCIDENTS
FUEL ELEMENT FAILURE
LOSS OF COOLANT
MELTDOWN
Computerized Simulation
CONACS: the DOE safety analysis system, 10:39307 (R;US)
Emergency Plans
Effects of early pump trip on the time-to-core uncovery for a TMI-type accident, 10:39345 (R;US)
Hand calculational techniques in reactor safety analysis, 10:39288 (R;US)
Environmental Impacts
SPEEDI: system for prediction of environmental emergency dose information, 10:39342 (R;JP;In Japanese)
Failure Mode Analysis
Development of probabilistic risk assessment framework for utilization of data. TMI-2 technology transfer contract. Task 3 final report, 10:39362 (R;US)
Loss of offsite power in pressurized water reactors: a combined probabilistic and thermal-hydraulic analysis, 10:39285 (R;US)
Heat Losses
Effect of pipe insulation losses on a loss-of-heat sink accident for an LMR, 10:39246 (R;US)
Hydrogen Production
Hydrogen-steam jet-flame facility and experiments, 10:39353 (R;US)
Radiation Injuries
Sensitivity and uncertainty studies of the CRAC2 computer code, 10:39355 (R;US)
Radioactive Aerosols
Proceedings of the CSNI specialist meeting on nuclear aerosols in reactor safety, 10:39344 (R;DE)
Removal of airborne particulate radioactivity under accident conditions, 10:39240 (R;DE)
Reactor Physics
Physics of reactor safety. Quarterly report, January-March 1985. Volume 1, 10:39359 (R;US)
Risk Assessment
Development of probabilistic risk assessment framework for utilization of data. TMI-2 technology transfer contract. Task 3 final report, 10:39362 (R;US)
REMAND. Computer code for calculations of reactor accidents consequences, 10:39335 (RA;IL)

REACTOR CELLS
Burnup
Evaluation and reffinement of the neutronic calculation methodology (LEOPARD and CITATION computer codes), 10:39176 (R;BR;In Portuguese)

REACTOR COMMISSIONING
Regulations
Commissioning of nuclear power plants. Current requirements and future directions, 10:39141 (R;CA)

REACTOR COMPONENTS
See also BREEDING BLANKETS
CONTROL ELEMENTS
CONTROL ROD DRIVES
CORE CATCHERS
FUEL ELEMENTS

REACTOR COOLING SYSTEMS
REACTOR CORES

Failures
Pretest predictions for the response of a 1:8-scale steel LWR containment building model to static overpressurization, 10:39356 (R;US)

Seismic Effects
Recent research on methodology for seismic qualification of nuclear power plant equipment, 10:39371 (J;NL)

REACTOR CONTROL RODS
See CONTROL ELEMENTS

REACTOR CONTROL SYSTEMS

Computer Codes
Design evaluation of diagnostic method and display method for PWR plant computerized operator support system (COSS) in Japan, 10:39321 (RA;HU)
Methodology for functional testing of protection and control systems of nuclear power plants. Development of the code CAPTA, 10:39329 (RA;HU)
Structures and scan strategies of software net models, 10:39198 (RA;HU)

Performance Testing
Methodology for functional testing of protection and control systems of nuclear power plants. Development of the code CAPTA, 10:39329 (RA;HU)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
SECONDARY COOLANT CIRCUITS

Design
Conceptual design considerations for the dry cooling system of Israel's nuclear project, 10:39187 (RA;IL)

Fault Tree Analysis
Approach for a microprocessor-based surveillance system for a fast breeder reactor, 10:39328 (RA;HU)

Intergranular Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)

Ruptures
Probability of pipe failure in the reactor coolant loops of Babcock and Wilcox PWR plants. Volume 2. Guillotine break indirectly induced by earthquakes, 10:39361 (R;US)

Seismic Effects
Probability of pipe failure in the reactor coolant loops of Babcock and Wilcox PWR plants. Volume 2. Guillotine break indirectly induced by earthquakes, 10:39361 (R;US)

Stress Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)

System Failure Analysis
Probability of pipe failure in the reactor coolant loops of Babcock and Wilcox PWR plants. Volume 2. Guillotine break indirectly induced by earthquakes, 10:39361 (R;US)

REACTOR CORES

Design
Option for the Brazilian nuclear project: necessity of fast breeder reactors and core design for an experimental fast reactor, 10:39152 (RA;BR;In Portuguese)

Fluid Flow
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)

Heat Transfer
Thermal-hydraulic and neutronic analysis of pressurized water reactor cores (CANAL2 computer codes), 10:39120 (R;BR;In Portuguese)

Neutron Flux
Survey of the thermal and fast neutron flux distribution in the core of IPR-R1 reactor, 10:39224 (RA;BR;In Portuguese)

Optimization
Optimization of some parameters of the radioisotope production reactor (RPR) model, 10:39235 (RA;BR;In Portuguese)

Supports
Faulted stress analysis of the LOFT Lower Core Support Plate, 10:39278 (R;US)

REACTOR DECOMMISSIONING

Technology Transfer
Shippingport Atomic Power Station decommissioning transfer planning, 10:39368 (R;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS

Specifications
Accuracy and the accident qualification of a subcooled margin monitor for PWRs, 10:39327 (RA;HU)

Thermocouples
R and D advances in high temperature thermocouples for nuclear utilization in severe environment, 10:39185 (R;FR)

REACTOR KINETICS

Computer Calculations
BARC-35: A 35 group cross-section library with P_3-anisotropic scattering matrices and resonance self-shielding factors, 10:40864 (R;IN)

Group Constants
Few-group constant preparation for reactor calculation in three-dimensional hexagonal geometry, 10:39148 (R;SU;In Russian)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS

Coordinated Research Programs
Overview of European Community (Activity 3) work on materials properties of fast reactor structural materials, 10:39524 (RA;XA)

Intergranular Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)

Metallography
Los Alamos upgrade in metallographic capabilities, 10:39729 (R;US)

Physical Radiation Effects
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)

Stress Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)

REACTOR OPERATION

Emergency Plans
Development of symptoms-oriented operating procedures, 10:39208 (R;CA)

Meetings
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 10:39109 (R;HU)

Quality Assurance
Use of reliability data for QA program evaluation, 10:39367 (R;US)

Specifications
Development of symptoms-oriented operating procedures, 10:39208 (R;CA)

REACTOR OPERATORS

Behavior
Nuclear power plant personnel qualifications and training: TAPS: the task analysis profiling system. Volume 2, 10:41075 (R;US)

Decision Making
Experimental applications of an expert system to operator problem solving in process control, 10:39290 (R;US)

Evaluation
Nuclear power plant personnel qualifications and training: TAPS: the task analysis profiling system. Volume 2, 10:41075 (R;US)
Man-Machine Systems
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 10:39109 (R;HU)
Meetings
Proceedings of the specialists' meeting on systems and methods for aiding nuclear power plant operators during normal and abnormal conditions, Balatonaliga, Hungary, 4-6 October 1983, 10:39109 (R;HU)
Neutron Dosimetry
Measurements of neutron dose and spectra inside reactor containment, 10:39365 (R;US)
Performance
Collection and analysis of training simulator data, 10:39169 (R;US)
Training
Collection and analysis of training simulator data, 10:39169 (R;US)
How accreditation can help achieve excellence in training programs, 10:39165 (RA;US)
Working Days
Recommendations for NRC policy on shift scheduling and overtime at nuclear power plants, 10:39360 (R;US)

RETORTED SHALES
See SPENT SHALES

RETORTING
Health Hazards
Los Alamos environmental activities/oil shale effluents, 10:38818 (R;US)
Mathematical Models
Modeling efforts within the DOE Oil Shale Program, 10:38814 (R;US)

REVERSE-FIELD PINCH
Alfven Waves
Implicit algorithm for compressible three-dimensional magnetohydrodynamic calculations, 10:41006 (J;US)
Magnetic Probes
Structure of the magnetic equilibrium in the HBTX1A reversed field pinch, 10:40959 (R;GB)
Plasma
Structure of the magnetic equilibrium in the HBTX1A reversed field pinch, 10:40959 (R;GB)

RHENIUM
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

RHENIUM 187
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

RHENIUM ALLOYS
See also RHENIUM BASE ALLOYS
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

RHENIUM BASE ALLOYS
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

RHODE ISLAND
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)

RHODIUM
Catalytic Effects
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)

RHODIUM BORIDES
Ferromagnetism
Resolution of the nature of the ferromagnetic state in ternary $EuRh_3B_2$: Giant Moessbauer quadrupole splitting, 10:39595 (J;US)
Magnetic Properties
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)
Magnetization
Resolution of the nature of the ferromagnetic state in ternary $EuRh_3B_2$: Giant Moessbauer quadrupole splitting, 10:39595 (J;US)

RHODOPSIN
Photochemistry
Perturbation effects on the observed deprotonation processes in the photocycle of bacteriorhodopsin, 10:39004 (R;US)

RHYOLITES
Isotope Dating
Fourfold significance of an early Silurian U-Pb zircon age from rhyolite in redbeds, southwest Newfoundland, 10:40330 (RA;CA)

RICHLAND FFTF REACTOR
See FFTF REACTOR

RICHLAND NPR REACTOR

Geology
Subsurface geology of the Pajarito Plateau, Espanola Basin, New Mexico, 10:40343 (R;US)

RISER CRACKING
See COAL LIQUEFACTION

RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Optimal allocation of resources for safety, 10:39379 (RA;CA)
Options for operational risk assessments, 10:39767 (R;US)
Computer Codes
REMAND. Computer code for calculations of reactor accidents consequences, 10:39335 (RA;IL)
SETS reference manual, 10:39358 (R;US)
Computerized Simulation
Framework for generating expert systems to perform computer security risk analysis, 10:38962 (R;US)
Education
Need for training senior technical and managerial personnel in applying PRA methods, 10:39336 (RA;IL)
Failure Mode Analysis
Introduction of accidental procedures in the Event Trees of the 900 MW PWR PRA, 10:39298 (RA;US)
Human Factors
Introduction of accidental procedures in the Event Trees of the 900 MW PWR PRA, 10:39298 (RA;US)
Research Programs
Operational safety related human engineering research in Finland, 10:39316 (RA;HU)
Technology Transfer
Potential uses of probabilistic risk assessment techniques for space station development, 10:41081 (R;US)
Training
Need for training senior technical and managerial personnel in applying PRA methods, 10:39336 (RA;IL)
RIVERS
See also COLUMBIA RIVER
Aeration
Modeling the downstream improvements in dissolved oxygen from aeration of Cherokee and Douglas releases, 10:38993 (R;US)
Flow Rate
Stream flow measurements by radioactive tracer techniques, 10:40177 (RA;MX;In Spanish)
Hydrology
Hydrogeology of parts of the Central Platte and Lower Loup Natural Resources Districts, Nebraska, 10:40359 (R;US)
Resources
Pacific Northwest Rivers Study assessment guidelines: Montana, 10:39381 (R;US)
Pacific Northwest Rivers Study assessment guidelines: Idaho, 10:39382 (R;US)
Pacific Northwest Rivers Study assessment guidelines: Oregon, 10:39383 (R;US)
Pacific Northwest Rivers Study assessment guidelines: Washington, 10:39384 (R;US)
Water Pollution
Evaluation of heavy metal contents in non tidal influenced Elbe river water during 1979/80, 10:40186 (R;DE)
ROBINSON-2 REACTOR
Spent Fuel Elements
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
ROBOTS
Artificial Intelligence
Hypercube concurrent computation and virtual time for robotic application, 10:41078 (R;US)
Communications
Future directions in mobile teleoperation, 10:39766 (R;US)
Control Systems
Future directions in mobile teleoperation, 10:39766 (R;US)
Power and signal transmission for mobile teleoperated systems, 10:39716 (R;US)
Data Transmission
Power and signal transmission for mobile teleoperated systems, 10:39716 (R;US)
Mobility
Future directions in mobile teleoperation, 10:39766 (R;US)
Power Transmission
Power and signal transmission for mobile teleoperated systems, 10:39716 (R;US)
ROCK DRILLING
Drill Bits
Rock breakage mechanisms with a PDC cutter, 10:39049 (R;US)
ROCK MECHANICS
Dependence of fracture mechanical properties on fracture roughness and sample size, 10:40382 (RA;US)
Computerized Simulation
Computer modelling of stresses in rock. Proceedings of a technical session, 10:38890 (R;XE)
Meetings
Computer modelling of stresses in rock. Proceedings of a technical session, 10:38890 (R;XE)
Proceedings of a technical session on rock mechanics "Advance in laboratory sample testing", 10:38882 (R;XE)
ROCK SALT
See SALT DEPOSITS
ROCKETS
Coverings
Explosively separable casing, 10:41066 (P;US)
ROCKS
See also IGNEOUS ROCKS
SEDIMENTARY ROCKS
Fracturing
Rock breakage mechanisms with a PDC cutter, 10:39049 (R;US)
ROCKY FLATS PLANT
Nuclear Materials Management
Audit trails in an online accountability system, 10:38964 (R;US)
Radioactive Waste Processing
Pyrochemical development at Rocky Flats for recovery and purification of plutonium, 10:38936 (BA;US)
ROCKY MOUNTAINS
Rangelands
Estimating postfire changes in production and value of northern Rocky Mountain-Intermountain rangelands. Final report, 10:40176 (R;US)
RODS (CONTROL)

ROTARY SEPARATOR TURBINES
Field Tests
Field testing of a biphase rotary separator turbine for concentration of industrial process fluids. Technical progress report No. 18, 18 May-14 June 1985, 10:38797 (R;US)
ROTATING PLASMA
Equilibrium
Magnetohydrodynamic equilibrium and stability of rotating field-reversed configurations with excluded multipole fields, 10:40996 (J;US)
Stability
Magnetohydrodynamic equilibrium and stability of rotating field-reversed configurations with excluded multipole fields, 10:40996 (J;US)
RUBBERS
Chemical Radiation Effects
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)
Physical Radiation Effects
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)

RUBIDIUM 87
Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)
RUBIDIUM ISOTOPES
See also RUBIDIUM 87
Isotope Production
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)
RUPTURE DISKS
See RELIEF VALVES
RUSSELLVILLE-1 ARKANSAS REACTOR
See ARKANSAS-1 REACTOR
RUTHENIUM
Catalytic Effects
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
RUTHENIUM BORIDES
Magnetic Properties
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)
Superconductivity
Magnetic behavior of transition metal substituted $CeRh_3B_2$: destabilization of the 4f moment, 10:39586 (R;US)
RYDBERG STATES
Prior to April 1981, this concept was indexed to RYDBERG CORRECTION.
Energy-Level Transitions
Energy level shifts in atoms near a metallic plane, 10:40461 (R;NO)
Lamb Shift
Energy level shifts in atoms near a metallic plane, 10:40461 (R;NO)

S

SAFETY
For general aspects of safety and protection of personnel.
See also OCCUPATIONAL SAFETY
REACTOR SAFETY
Cost Benefit Analysis
Optimal allocation of resources for safety, 10:39379 (RA;CA)
Risk Assessment
Application of probabilistic risk assessments in demonstrating the adequacy of safety in the design of nuclear chemical plants, 10:38952 (RA;US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SAFETY VALVES

PICEANCE CREEK BASIN
SALMONELLA
Lethal Irradiation
Elimination of Salmonella in froglegs by irradiation. Coordinated programme on factors influencing the utilization of food irradiation processes. Final report for the period 1 November 1980-31 October 1984, 10:40279 (R;XA)
SALT CAVERNS
Rock Mechanics
Cataclastic effects in rock salt laboratory and in situ measurements, 10:38888 (R;XE)
SALT DEPOSITS
Deformation
Implementation of thermal/structural interactions in situ tests at the Waste Isolation Pilot Plant facility, 10:38926 (R;US)
Fracture Properties
Laboratory hydraulic fracturing stress measurements in salt, 10:40385 (RA;US)
Radioactive Waste Disposal
Cataclastic effects in rock salt laboratory and in situ measurements, 10:38888 (R;XE)
Thermomechanical response of salt and hard rocks to thermal loading by wastes over 10 years old, 10:38906 (RA;US)
Trial storage of high-level waste in the Asse II salt mine. Final report 1980, 10:38884 (R;XE)
Trial storage of high-level waste cylinders in the Asse II salt mine. Final report 1977/1978, 10:38885 (R;XE)
Radioactive Waste Storage
Trial storage of high-level waste in the Asse II salt mine. Final report 1980, 10:38884 (R;XE)
Trial storage of high-level waste cylinders in the Asse II salt mine. Final report 1977/1978, 10:38885 (R;XE)
Temperature Effects
Implementation of thermal/structural interactions in situ tests at the Waste Isolation Pilot Plant facility, 10:38926 (R;US)
SAMARIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
SAMARIUM 141
Energy Levels
Nuclear data sheets for A = 141, 10:40747 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 141, 10:40747 (J;US)
SAMARIUM 144 REACTIONS
Deep Inelastic Heavy Ion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
SAMARIUM 144 TARGET
Samarium 144 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
SAMARIUM 146
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
SAMARIUM 147
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
Neutron Reactions
Evaluation of fast-neutron radiative capture cross-sections for samarium and europium odd isotopes, 10:40733 (RA;XA)
SAMARIUM 148
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
SAMARIUM 149
Neutron Reactions
Evaluation of fast-neutron radiative capture cross-sections for samarium and europium odd isotopes, 10:40733 (RA;XA)
Neutron Transport
Neutron tests on samarium polarising filters, 10:40881 (R;GB)
Neutrons
Neutron tests on samarium polarising filters, 10:40881 (R;GB)
SAMARIUM 154 REACTIONS
Deep Inelastic Heavy Ion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
SAMARIUM 154 TARGET
Samarium 154 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
SAMARIUM FLUORIDES
Crystal Field
Electric field gradients at Gd in gadolinium and rare earth trifluoride single crystals, 10:40456 (R;SU)
SAMARIUM ISOTOPES
See also SAMARIUM 141
SAMARIUM 146

SAMARIUM 149

Energy Levels
Low-lying dipole states of spherical nuclei, 10:40736 (RA;SU;In Russian)
SANDSTONES
Hydraulic Fractures
Further development of a fracture model for lenticular gas sands. Final report, 10:38803 (R;US)
SARCOMAS
See also OSTEOSARCOMAS
Radioinduction
Radionuclide injury to the lung, 10:40301 (J;US)
SAUDI ARABIA
Rain Water
Rainfall quality at selected sites in Saudi Arabia, 10:40133 (R;US)
SAVANNAH RIVER PLANT
Nuclear Materials Management
Confirmatory measurements of special nuclear materials, 10:38954 (R;US)
Radiation Hazards
Centers for Disease Control review panel's recommendations on health effects and epidemiological studies of operations at the Savannah River Plant, Aiken, South Carolina. Public comment and meeting report, 10:40265 (R;US)
Radioactive Waste Management
Savannah River Interim Waste Management Program Plan, FY 1985, 10:38879 (R;US)
SCALERS
Specifications
Two-channel energy-selective workplace for isotope labs based on MMT system, 10:40218 (RA;HU)
SCALING LAWS
Range of validity of KNO scaling, 10:40510 (R;US)
SCALING UNITS
See SCALERS
SCANDIUM 43
Decay
Evaluation of non statistical effects in $^{20}Ne + ^{24}Mg$ reactions below 10 MeV/A, 10:40700 (RA;FR)
SCANNING ELECTRON MICROSCOPY
Fully quantitative x-ray microanalysis using the SEM. Is it really feasible?, 10:39662 (RA;CA)
X-ray microscopy with a scanning electron microscope, 10:40069 (RA;CA)
Automation
Proceedings, 10:40071 (R;CA)
Meetings
Proceedings, 10:40067 (R;CA)
Reviews
Recent advances in scanning electron microscopy (STEM; SEAM), 10:40070 (RA;CA)
SCANNING MEASURING PROJECTORS
On-Line Measurement Systems
Hardware for the operator-computer dialogue in the AEhLT-2/160 system on-line with the SM-4 computer, 10:39772 (R;SU;In Russian)
SCATTERING

SOLID SCINTILLATION DETECTORS
Time Resolution
Time resolution measurement of a BaF_2-microchannel plate detector, 10:40066 (RA;NL)
SCINTILLATION COUNTING
Counting by liquid scintillation techniques, 10:39959 (RA;MX;In Spanish)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCOTLAND
See UNITED KINGDOM
SCRUBBERS
Field Tests
Feasibility of a machine-mounted scrubber system for ventilating coal-mine working faces. Open File report, 10:38730 (R;US)
SEA BED
Radioactive Waste Disposal
Assessment of biological processes close to the sea bed in a slope region and its significance to the assessment of sea bed disposal of radioactive waste, 10:38898 (R;GB)
Radionuclide Migration
Behaviour of radioactive krypton-85 in the deep sea, 10:38902 (R;DE;In German)
SEA DISPOSAL
See MARINE DISPOSAL
SEAFOOD
Radiation Monitoring
Assessment of radioactivity in the environs of a titanium dioxide plant at Bunbury, Western Australia, 10:40193 (R;AU)
SEALS
See also SECURITY SEALS
Compression Strength
Factors influencing the design and assessment of elastomer seals for Nuclear Fuel Transport Flasks, 10:39715 (R;GB)
Design
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)
Fabrication
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)
Injection molding-sealing of glass to low melting metals, 10:39476 (R;US)
Failures
Development of a reactor coolant pump monitoring and diagnostic system. Topical report: system development and installation, July 1980-May 1984, 10:39116 (R;US)
Reactor coolant pump shaft seal behavior during blackout conditions, 10:39286 (R;US)
Molding
In-situ vacuum-assisted molding of glass-metal electrical components, 10:39475 (R;US)
Monitoring
Development of a reactor coolant pump monitoring and diagnostic system. Topical report: system development and installation, July 1980-May 1984, 10:39116 (R;US)
Testing
Fluid seals development for coal liquefaction slurry pumps. Quarterly technical progress report No. 11, 1 April 1985-30 June 1985, 10:38684 (R;US)
SEAWATER
Corrosive Effects
Marine corrosion. Final report, 10:39479 (R;US)
Degassing
Measurements of gas sorption from seawater and the influence of gas release on open-cycle ocean thermal energy conversion (OC-OTEC) system performance, 10:39018 (R;US)

Dissolved Gases
Measurements of gas sorption from seawater and the influence of gas release on open-cycle ocean thermal energy conversion (OC-OTEC) system performance, 10:39018 (R;US)

SEBACEOUS GLANDS
See SKIN

SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECONDARY COOLANT CIRCUITS
Data Processing
CANDU 600 primary heat transport system thermalhydraulic commissioning (NUCIRC, SOPHT codes), 10:39207 (R;CA)

SECURITY SEALS
Acoustic Detection
Statistical evaluation of set-up errors in the ARC/SPAR system (Evidence of tampering), 10:38968 (R;US)

SEDIMENTARY ROCKS
See also SANDSTONES
SHALES
Electromagnetic Surveys
Electromagnetic mapping of sedimentary sections beneath basalt flows, 10:40377 (RA;US)
Fission Spectra
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Fission Tracks
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Multi-Element Analysis
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)

SEDIMENTS
Activation Analysis
Recent development and applications of activation methods in radiochemical laboratory of Mineral Raw Materials Institute, 10:39658 (RA;CS;In Czech)
Chemical Composition
Analytical results of stream-sediment samples from the Medford 1° x 2° quadrangle, Oregon-California, 10:40395 (R;US)
Creep
1983 Subseabed Disposal Program: geotechnical laboratory and modeling studies. Annual report, October 1982-September 1983, 10:38927 (R;US)
Environmental Transport
Evaluation of a hydrograph-shifting method for estimating suspended-sediment loads in Illinois streams, 10:40361 (R;US)
Mixing
Modeling the performance of sediment detention pond. Volume 1. The CSTRS (continuous stirred tank reactors in series) model based on simple reactor theory. Final report, 10:38725 (R;US)
Radiation Monitoring
Assessment of radioactivity in the environs of a titanium dioxide plant at Bunbury, Western Australia, 10:40193 (R;AU)
Temperature Effects
1983 Subseabed Disposal Program: geotechnical laboratory and modeling studies. Annual report, October 1982-September 1983, 10:38927 (R;US)

SEISMIC EVENTS
See also EARTHQUAKES
Risk Assessment
Pipeline gas demonstration plant, Phase I. Preliminary foundation investigation and soil analysis report. Appendix B (Illinois Coal Gasification Group; Perry County), 10:38676 (R;US)

SEISMIC P WAVES
Monitoring
Tau estimates of lateral variations in mantle P-wave velocities, 10:40371 (RA;US)

SEISMOLOGY
Data Analysis
Seismology: center for computational seismology, 10:40365 (RA;US)
Data Processing
CCS/DARPA seismic data base development, 10:40367 (RA;US)

SELENIUM
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)
Removal
Trace element removal by coprecipitation with amorphous iron oxyhydroxide: engineering evaluation. Final report, 10:38723 (R;US)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)

SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY

SEMICONDUCTOR LASERS
Design
Injection laser structure design. Final report, 1 May 1980-31 August 1984, 10:39743 (R;US)

SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Ferromagnetism
Low-temperature Peltier heat of an itinerant electron in a ferromagnetic semiconductor, 10:40924 (J;US)
Impurities
Impurity states in two-and three-dimensional disordered systems, 10:39615 (R;BR)
Thermoelectric Properties
Low-temperature Peltier heat of an itinerant electron in a ferromagnetic semiconductor, 10:40924 (J;US)

SENIOR CENTERS

SEPARATION PROCESSES
See also CENTRIFUGATION
FLOTATION
Gas Chromatography
Separation of krypton from dissolver off-gas of a reprocessing plant using preparative gas chromatography, 10:38843 (R;DE;In German)
Two-Phase Flow
Efficiency of a fluid-fluid centrifugal separation, 10:39681 (R;SE)

SEPTUM MAGNETS
Septum magnet for proton extraction system at the IHEP accelerator, 10:39837 (R;SU;In Russian)
Construction
Report of the Accelerator Group: the separated-sector cyclotron, 10:39874 (RA;ZA)
Design
Design of a three channel septum magnet, 10:39815 (R;US)

SERPUKHOV SYNCHROTRON
Beam Extraction
Septum magnet for proton extraction system at the IHEP accelerator, 10:39837 (R;SU;In Russian)
Betatron Oscillations
Systems for damping the beam transverse dipole oscillations in the IHEP accelerator, 10:39807 (R;SU;In Russian)
Septum Magnets
Septum magnet for proton extraction system at the IHEP accelerator, 10:39837 (R;SU;In Russian)

SERUM (BLOOD)
See BLOOD SERUM

SHALE OIL
Chemical Composition
Nitrogen compound types in hydrotreated shale oils, 10:38815 (R;US)

Denitrification
Nitrogen compound types in hydrotreated shale oils, 10:38815 (R;US)
Solvent Extraction
Application of solvent hydrogen donor process for the conversion of eastern oil shales. Final progress report, October 1, 1982-December 31, 1984, 10:38813 (R;US)
SHALE TAR WATER
Quantitative Chemical Analysis
Gas chromatography/mass spectrometry determination of water-soluble primary amines as their pentafluorobenzaldehyde imines, 10:39686 (J;US)
SHALES
Hydraulic Fracturing
Waste disposal by hydrofracture and application of the technology to the management of hazardous wastes, 10:38873 (R;US)
Permeability
Hydrophysical interactions of organic chemicals with geological materials. Research highlights subsurface transport program, 10:40160 (R;US)
Radioactive Waste Disposal
Thermomechanical response of salt and hard rocks to thermal loading by wastes over 10 years old, 10:38906 (RA;US)

Study and application of Dot 3.5 computer code in radiation shielding problems, 10:39184 (RA;BR;In Portuguese)
D Codes
Study and application of Dot 3.5 computer code in radiation shielding problems, 10:39184 (RA;BR;In Portuguese)
Design
Concept and design of shielding for nuclear power plants with pressurized water reactors: application for a NUCLEN case, 10:39312 (RA;BR;In Portuguese)
Meetings
Proceedings of the sixth international conference on radiation shielding, 2, 10:41056 (B;JP)
Research Programs
Status of reactor shielding research in the United States, 10:40887 (BA;JP)
Reviews
Status of reactor shielding research in the United States, 10:40887 (BA;JP)
Sensitivity Analysis
Predictive models based on sensitivity theory and their application to practical shielding problems, 10:40884 (BA;JP)
SHIELDING MATERIALS
Neutron Transport
Integral experiments for fusion reactor shield design - summary of progress, 10:41055 (BA;JP)
Photon Transport
Integral experiments for fusion reactor shield design - summary of progress, 10:41055 (BA;JP)
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Reactor Decommissioning
Shippingport Atomic Power Station decommissioning transfer planning, 10:39368 (R;US)
Shippingport Station Decommissioning Project: overview, 10:39369 (R;US)
SHOCK (IMPACT)
See IMPACT SHOCK
SHOCK WAVES
See also DETONATION WAVES
Absorption spectra of shocked liquid CS_2, 10:39688 (R;US)
Subthreshold generation of free radicals in shock-loaded organic solids, 10:39695 (R;US)
Interferometry
Microwave interferometer for shock wave, detonation, and material motion measurements, 10:40098 (J;US)
Measuring Instruments
Recent developments in Microshell-tipped optical fibers as high-pressure shock detectors, 10:40092 (R;US)
Reflection
Computer simulation of the effect of free surface reflection on shock wave propagation in water, 10:40111 (R;US)
Wave Propagation
Computer simulation of the effect of free surface reflection on shock wave propagation in water, 10:40111 (R;US)
Dynamics of shock-induced energy flux in molecular bonds, 10:40106 (R;US)
Measurements and calculations of shock propagation in dry desert alluvium, 10:40105 (R;US)
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Calibration
Calibration of an electron shower detector using a neutral beam, 10:39984 (R;SU;In Russian)
Design
Calorimeters for electron and photon detection in colliding beam experiments, 10:40002 (RA;SU;In Russian)
Performance
Calorimeters for electron and photon detection in colliding beam experiments, 10:40002 (RA;SU;In Russian)
Readout Systems
Scintillator-lead photon calorimeter using optical fiber readout systems, 10:40044 (R;DE)
Reviews
Calorimeters for electron and photon detection in colliding beam experiments, 10:40002 (RA;SU;In Russian)
Scintillator-Photodiode Detectors
Scintillator-lead photon calorimeter using optical fiber readout systems, 10:40044 (R;DE)
Solid Scintillation Detectors
Some possible improvements in scintillation calorimeters, 10:40043 (R;DE)
SHRIMP
Food Processing
Effect of low-dose gamma irradiation on the shelf-life and quality of frozen shrimp (Penaeus merquiensis), 10:40295 (R;TH)
Radurization
Effect of low-dose gamma irradiation on the shelf-life and quality of frozen shrimp (Penaeus merquiensis), 10:40295 (R;TH)
SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN
SI SEMICONDUCTOR DETECTORS
See also LI-DRIFTED SI DETECTORS
Etching
Relation of chemical etching and performance of Si/Au detectors, 10:39941 (RA;CS;In Czech)
Performance
Relation of chemical etching and performance of Si/Au detectors, 10:39941 (RA;CS;In Czech)
Preamplifiers
Design of low-noise preamplifiers for some special applications in high energy experiments, 10:40039 (RA;SU)
Pulses
Determination of nSi/Au detector charge pulse from measured values, 10:39946 (RA;CS;In Czech)
Recoils
Using atom recoil method in the development of detectors with thin insensitive layers, 10:39980 (RA;SU;In Russian)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA MODEL
Nonlinear Problems
Holonomy anomalies, 10:40638 (R;US)

SIGMA PARTICLES
See also SIGMA PLUS
Particle Production
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
SIGMA PLUS
Particle Production
Experimental study on the $\pi i p \rightarrow K^+ \Sigma^+$ reaction at 12 GeV/c, 10:40532 (R;SU;In Russian)
SIGMA-1385 RESONANCES
Particle Production
Differential cross section of the $\pi^+ p \rightarrow K^+ \Sigma^+$ (1385) reacton at 12 GeV/c, 10:40533 (R;SU;In Russian)
SILICA
Catalytic Effects
Improved catalysts for coal liquefaction. Quarterly report No. 3, March 1-May 31, 1985, 10:38699 (R;US)
Crystallization
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Refractivity
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
Thermal Expansion
Physical property changes of a lithia-alumina-silica based glass as a function of composition, 10:39618 (R;US)
SILICATES
Geochemistry
Oxide solution mechanisms in silicate melts: systematic variations in the activity coefficient of SiO_2, 10:40397 (J;GB)
Phase Transformations
Oxide solution mechanisms in silicate melts: systematic variations in the activity coefficient of SiO_2, 10:40397 (J;GB)
Thermodynamic Properties
Thermodynamic properties of silicate materials, 10:40391 (RA;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Alpha Reactions
Total cross sections of the alpha particles-nuclei interactions at 60 and 80 MeV, 10:40691 (RA;SU;In Russian)
Annealing
Effects of As impurities on the solidification velocity of Si during pulsed laser annealing, 10:39630 (J;US)
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Coherent bremsstrahlung from 10 GeV positrons in thin Si crystal, 10:40874 (R;SU;In Russian)
In situ investigation of transport in semiconductors: A contactless approach, 10:39627 (J;US)
Properties and photovoltaic applications of microcrystalline silicon films prepared by RF reactive sputtering, 10:39005 (J;US)
Chemical Vapor Deposition
Amorphous silicon photovoltaic devices prepared by chemical and photochemical vapor deposition of higher order silanes. Technical progress report, 1 September 1984-28 February 1985, 10:39001 (R;US)
Crystal Doping
Crystallinity, morphology, and conductivity of boron-doped microcrystal-line silicon, 10:39640 (J;US)
Electric Conductivity
Crystallinity, morphology, and conductivity of boron-doped microcrystal-line silicon, 10:39640 (J;US)
Electrodeposition
Use of optical emission spectroscopy as a diagnostic technique for plasma deposition of hydrogenated amorphous silicon and carbon, 10:39639 (J;US)
Electro-Optical Effects
In situ investigation of transport in semiconductors: A contactless approach, 10:39627 (J;US)
Grain Boundaries
Kinetic modeling for hydrogen passivation of polycrystalline silicon, 10:39634 (J;US)
Impurities
Effects of As impurities on the solidification velocity of Si during pulsed laser annealing, 10:39630 (J;US)
Ion Implantation
Materials-process interactions in ternary alloy semiconductors. Final report, 1 May 1982-31 October 1983, 10:39600 (R;US)
Ion-Atom Collisions
Collision cascades in silicon and germanium, 10:40448 (RA;CA)
Leaching
Parametric testing of a DWPF glass, 10:38934 (R;US)
Meetings
Proceedings of the Flat-Plate Solar Array Project Research Forum on the high-speed growth and characterization of crystals for solar cells, 10:39000 (R;US)
Melting
Melting of crystalline and amorphous silicon by Ruby, XeCl and KrF laser irradiation, 10:39609 (R;US)
Microstructure
Crystallinity, morphology, and conductivity of boron-doped microcrystal-line silicon, 10:39640 (J;US)
Neutral-Particle Transport
Kinetic modeling for hydrogen passivation of polycrystalline silicon, 10:39634 (J;US)
Opacity
Properties and photovoltaic applications of microcrystalline silicon films prepared by RF reactive sputtering, 10:39005 (J;US)
Passivation
Kinetic modeling for hydrogen passivation of polycrystalline silicon, 10:39634 (J;US)
Photon Transport
Comparative spectra and total cross sections of pair production by photons in various crystals, 10:40865 (R;SU;In Russian)
Physical Radiation Effects
Collision cascades in silicon and germanium, 10:40448 (RA;CA)
Recovery of neutron-irradiated high-purity Si, 10:39603 (R;US)
Positron Collisions
Positron diffusion in Si, 10:39605 (R;US)
Solidification
Effects of As impurities on the solidification velocity of Si during pulsed laser annealing, 10:39630 (J;US)
Superconductivity
Pressure increase of the electron-phonon interaction in superconducting hexagonal silicon, 10:39632 (J;US)
Thermal Diffusivity
In situ investigation of transport in semiconductors: A contactless approach, 10:39627 (J;US)
SILICON 28 REACTIONS
Heavy Ion Fusion Reactions
Behaviour of ^{144}Gd at very high angular momentum. Study of the continuum, 10:40728 (R;FR;In French)
SILICON 28 TARGET
Alpha Reactions
Effect of population of the magnetic substates of the 2^+_1 level on alpha particle inelastic scattering, 10:40706 (RA;SU;In Russian)
Carbon 12 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Giant Resonance
Isospin homogeneity of giant dipole resonances, 10:40681 (RA;SU;In Russian)
Proton Reactions
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
SILICON ALLOYS
Extrusion
Hydrostatic extrusion of amorphous $Fe_{82}B_{12}Si_8$ and $U_{70}Cr_{30}$ ($Fe_{82}B_{12}Si_8$; $U_{70}Cr_{30}$), 10:39567 (R;US)
SILICON CARBIDES
Corrosion
Corrosion behavior and mechanical properties of silicon carbide exposed to a coal gasification environment, 10:38662 (R;US)

Mechanical Properties
Corrosion behavior and mechanical properties of silicon carbide exposed to a coal gasification environment, 10:38662 (R;US)

SILICON NITRIDES
Crack Propagation
High-temperature fracture mechanics of silicon-nitride, 10:39585 (R;DE;In German)
Fracture Mechanics
High-temperature fracture mechanics of silicon-nitride, 10:39585 (R;DE;In German)

SILICON OXIDES
See also QUARTZ
SILICA
Reaction Kinetics
Oxide solution mechanisms in silicate melts: systematic variations in the activity coefficient of SiO_2, 10:40397 (J;GB)

SILICON SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Fabrication
Amorphous silicon photovoltaic devices prepared by chemical and photochemical vapor deposition of higher order silanes. Technical progress report, 1 September 1984-28 February 1985, 10:39001 (R;US)
Properties and photovoltaic applications of microcrystalline silicon films prepared by RF reactive sputtering, 10:39005 (J;US)
P-N Junctions
Properties and photovoltaic applications of microcrystalline silicon films prepared by RF reactive sputtering, 10:39005 (J;US)
Research Programs
Thin film photovoltaic technology future application potential, 10:39009 (BA;US)
Semiconductor Materials
Thin film photovoltaic technology future application potential, 10:39009 (BA;US)
Thin Films
Research and developmental study on MIS thin film solar cells of amorphus hydrogenated silicon. Pt. 2, 10:38996 (R;DE;In German)
Thin film photovoltaic technology future application potential, 10:39009 (BA;US)

SILICONES
Chemical Radiation Effects
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)
Physical Radiation Effects
Radiation resistant modification of silicone rubber. Studies on the heat and radiation resistant organic insulator of wires and cables for nuclear power generation plants (PWR), 10:39596 (R;JP;In Japanese)

SILVER
Muon Probes
Muon spin relaxation study of exchange coupling in dilute AgMn alloys, 10:40460 (R;US)
Spin Exchange
Muon spin relaxation study of exchange coupling in dilute AgMn alloys, 10:40460 (R;US)

SILVER IODIDES
Ionic Conductivity
Molecular dynamics studies of superionic conductors, 10:40929 (BA;US)
Molecular Models
Molecular dynamics studies of superionic conductors, 10:40929 (BA;US)

SIMS

SODA ASH
See SODIUM CARBONATES

SODIUM
Charged-Particle Transport
Calculation of a mean free path of inelastic scattering and mean energy losses of 50 keV electrons in solids, 10:40870 (RA;SU;In Russian)
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

Leaching
Parametric testing of a DWPF glass, 10:38934 (R;US)
Photoionization
Photoionization of the excited 3p state of sodium: Experiment and theory, 10:40475 (J;US)
SODIUM CARBONATES
Catalytic Effects
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
Pneumatic Transport
Pneumatic conveying activities, 10:39714 (R;GB)
SODIUM CHLORIDES
Electronic Structure
MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)
MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)
F Centers
MC-UHF INDO CI calculation of F centers in alkali halides, 10:39621 (R;BR)
Lattice Parameters
MC-INDO calculations of LiF, NaCl, LiCl and NaF crystals, 10:39620 (R;BR)
Physical Radiation Effects
Thermo luminescence and related phenomena in X-irradiated ionic crystals, 10:39510 (RA;BR)
SODIUM CITRATES

SODIUM MINERALS
See MINERALS
SODIUM OXIDES
Diffusion
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
Ionic Conductivity
Ionic transport in sodium germanate glasses, 10:39607 (R;US)
SODIUM-SULFUR BATTERIES
Solid Electrolytes
Degradation of beta" alumina electrolytes. Final report, 10:39372 (R;US)
SOIL CHEMISTRY
Isotope Dilution
Isotopic techniques in studies of soil fertility and minerals as plant nutrients, 10:40259 (RA;MX;In Spanish)
SOIL MECHANICS
Soils survey. Project Officer's report, 10:40116 (R;US)
SOILS
Acidification
Acidifying and neutralizing effects of nitrogen fertilizers on forest soil, 10:40167 (TG;GB)
Chemical processes in forest soils. Progress report, August 1, 1984-July 1, 1985, 10:40161 (R;US)
Activation Analysis
Methodological aspects and development of techniques for neutron activation analysis of microcomponents in materials of geologic origin, 10:39647 (R;AR;In Spanish)
Age Estimation
Pleistocene climate and archaeology in Kashmir. New multidisciplinary data, 10:40334 (RA;NZ)
Chemical Composition
Uranium and base metal concentrations in till samples from northern Manitoba, 10:40388 (RA;CA)
Geochemistry
Statistical treatment of geochemical data and its application in the geologic mapping and in the definition of the geochemical anomalies in the Alvo 2-Corpo 4 -Provincia Mineral de Carajas, 10:40390 (R;BR;In Portuguese)
Geothermal Heating
Geothermal soil heating in Iceland, 10:39059 (BA;US)
Helium
Landfill gas project: helium soil-gas investigations. Final technical report, 10:40157 (R;US)
Humidity
Calibration of humidity measurement instruments using radioactive sources, 10:40153 (RA;MX;In Spanish)
Potassium
Interpretation of soil-type maps of forestry in terms of terrestrial gamma-ray dose rate, 10:40172 (R;DD;In German)
Quantitative Chemical Analysis
Quantitative determination of ^{210}Po in geochemical samples, 10:39648 (RA;CA)
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)
Interpretation of soil-type maps of forestry in terms of terrestrial gamma-ray dose rate, 10:40172 (R;DD;In German)
Radioassay
Si(Li)-NaI(Tl) sandw..h detector array for measurements of trace radionuclides in soil samples, 10:39890 (R;US)
Stabilization
Brown coal fly ash in soil stabilization, 10:38726 (R;US)
Velocity
Threshold velocities for input of soil particles into the air by desert soils, 10:40154 (J;US)
SOIL-STRUCTURE INTERACTIONS
Mathematical Models
Correlation of Fukushima data with SSI models, 10:39243 (R;US)
SOLAR ARCHITECTURE
Passive Solar Heating Systems
Investigation of the transferability of passive solar means in the USA to the Federal Republic of Germany, 10:39434 (R;DE;In German)
SOLAR ATMOSPHERE
Microwave Radiation
Oscillator phenomena in the solar atmosphere and radiation modulation in microwaves, 10:40401 (R;BR;In Portuguese)
Oscillations
Oscillator phenomena in the solar atmosphere and radiation modulation in microwaves, 10:40401 (R;BR;In Portuguese)
SOLAR BATTERIES
See SOLAR CELL ARRAYS
SOLAR CELL ARRAYS
Optimization
Development of a simple field technique for optimizing photovoltaic arrays in residential installations, 10:39007 (BA;US)

Performance
Development of a simple field technique for optimizing photovoltaic arrays in residential installations, 10:39007 (BA;US)
Research Programs
Overview of flat-plate photovoltaics technology, 10:39008 (BA;US)
Thermal Analysis
Thermal performance of residential photovoltaic arrays, 10:39013 (BA;US)

Monitoring
Operation update and monitoring conclusions of the Georgia Power Company solar system, 10:39019 (BA;US)
Performance
Operation update and monitoring conclusions of the Georgia Power Company solar system, 10:39019 (BA;US)
Performance Testing
Component reliability testing, 10:39022 (BA;US)
Reliability
An assessment of historical R & M data for SDHW systems, 10:39020 (BA;US)
Component reliability testing, 10:39022 (BA;US)

SOLAR INDUSTRY
Economic Growth
Photovoltaics industrialization in the world market, 10:38994 (BA;US)
Microorganisms
Microalgae and "in vitro" plant cells for the photosynthetic production of chemical products, 10:38998 (R;FR;In French)

SOLAR MODELS
See STAR MODELS

SOLAR NEUTRINOS
Prior to July, 1975 information was indexed to NEUTRINOS.
Neutrino Detection
Possibility of solar neutrino detection according to long-lived reaction products by means of laser radiation, 10:40410 (RA;SU;In Russian)

SOLAR PONDS
Boundary Layers
Passive stabilization of gradient zone boundaries in solar ponds, 10:39029 (BA;US)
Stability
Passive stabilization of gradient zone boundaries in solar ponds, 10:39029 (BA;US)

SOLAR PROCESS HEAT
Computerized Simulation
Modeling of the DOE-sponsored IPH field-test experiments, 10:39025 (BA;US)
Field Tests
Modeling of the DOE-sponsored IPH field-test experiments, 10:39025 (BA;US)
Performance
Modeling of the DOE-sponsored IPH field-test experiments, 10:39025 (BA;US)

SOLAR PROMINENCES
Towards hydrogen emission in filamentary prominences, 10:40405 (R;SU;In Russian)

SOLAR RADIO BURSTS
Microwave Radiation
Microwave and X-Ray emission during a isentropic expansion and its application to solar bursts, 10:40400 (R;BR;In Portuguese)

SOLAR RECEIVERS
Radiant Heat Transfer
Solar heat receiver, 10:39016 (P;US)

SOLAR SEA POWER PLANTS
See OCEAN THERMAL POWER PLANTS

SOLAR SYSTEM
Matter
Shadow world of superstring theories, 10:40424 (J;GB)

SOLAR SYSTEM EVOLUTION
Computerized Simulation
Passage of a "Nemesis"-like object through the planetary system, 10:40416 (J;US)
Disturbances
Passage of a "Nemesis"-like object through the planetary system, 10:40416 (J;US)

SOLAR THERMAL POWER PLANTS
Risk Assessment
Analysis of routine occupational risks associated with selected electrical energy systems. Final report, 10:40201 (R;US)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATERS
F-Chart
A modification to the f-chart method for domestic hot water systems with stratified storage, 10:39026 (BA;US)

Maintenance
An assessment of historical R & M data for SDHW systems, 10:39020 (BA;US)
Performance
A modification to the f-chart method for domestic hot water systems with stratified storage, 10:39026 (BA;US)
Reliability
An assessment of historical R & M data for SDHW systems, 10:39020 (BA;US)

SOLAR X-RAY BURSTS
X-Ray Spectra
Microwave and X-Ray emission during a isentropic expansion and its application to solar bursts, 10:40400 (R;BR;In Portuguese)

SOLAR-ASSISTED HEAT PUMPS
Performance
System performance evaluation of a prototype solar-assisted heat pump, 10:39021 (BA;US)

SOLAR-ASSISTED POWER SYSTEMS
A comparative economic analysis of a solar-powered/fuel-assisted hybrid Rankine system, 10:39017 (BA;US)

SOLID ELECTROLYTES
Failures
Degradation of beta" alumina electrolytes. Final report, 10:39372 (R;US)

SOLID SCINTILLATION DETECTORS
See also NAI DETECTORS
PLASTIC SCINTILLATION DETECTORS
Ce^{+3}- and Tb^{+3}-luminescence in glasses. Ce^{+3}-activated bulk silica and silica thin films. An α-particle detector based on a Ce^{+3}-activated silica thin film. A Ce^{+3}-Tb^{+3}-energy transfer in a high melting point phosphate glass, 10:39889 (R;FR)
Specifications
Scintillation detector for ^{226}Ra measurement in waters, 10:39954 (RA;CS;In Czech)

SOLID STATE LASERS
See also NEODYMIUM LASERS
Design
Thermal-optic distortion-free solid-laser technology. Final report, 30 November 1970-30 September 1972, 10:39740 (R;US)
Shape
Thermal-optic distortion-free solid-laser technology. Final report, 30 November 1970-30 September 1972, 10:39740 (R;US)

SOLID STATE PHYSICS
Historical Aspects
International project in history of solid state physics. Final report, 10:40917 (R;US)
Research Programs
Joint annual report 1983. [Nuclear physics research at ZFK Rossendorf and other GDR institutions], 10:40661 (R;DD;In German)

SOLID WASTES
See also MINERAL WASTES
WOOD WASTES
Environmental Transport
Energy-related solid wastes environmental transport and fate. Geochemical, hydrological and ecological research in the mobilization, environmental transport and long term effects of organic compounds, trace elements and radionuclides from energy residuals, 10:40158 (R;US)
Information Needs
Subsurface Transport Program. Workshop on research needs: solid wastes from energy producing technologies. Summary report, 10:40159 (R;US)
Meetings
Subsurface Transport Program. Workshop on research needs: solid wastes from energy producing technologies. Summary report, 10:40159 (R;US)
Radionuclide Migration
Energy-related solid wastes environmental transport and fate. Geochemical, hydrological and ecological research in the mobilization, environmental transport and long term effects of organic compounds, trace elements and radionuclides from energy residuals, 10:40158 (R;US)
Toxicity
Geochemical properties of coal wastes and the toxicological effects on aquatic life. Environmental geology notes, 10:38728 (R;US)
Water Pollution
Geochemical properties of coal wastes and the toxicological effects on aquatic life. Environmental geology notes, 10:38728 (R;US)

SOLIDS
Charged-Particle Transport
Stopping power for ions in solids, 10:40872 (R;JP;In Japanese)
Electron Collisions
Intensive beam dosimetry of accelerated electrons of low energy, 10:40449 (R;RO;In Romanian)
Neutron Transport
f-sum rule for magnetic neutron-electron scattering, 10:40882 (R;GB)
Plasticity
Viscosity and steady shocks, 10:40921 (J;US)
Shock Waves
Viscosity and steady shocks, 10:40921 (J;US)
Strains
Viscosity and steady shocks, 10:40921 (J;US)
Viscosity
Viscosity and steady shocks, 10:40921 (J;US)
Wave Propagation
Theory of elastic wave scattering: Applications of the method of optimal truncation, 10:40925 (J;US)

SOLID-STATE PLASMA
Electric Conductivity
Plane-wave theory of electrical transport in disordered systems, 10:40939 (R;US)
Thermal Conductivity
Plane-wave theory of electrical transport in disordered systems, 10:40939 (R;US)

SOLITONS
Acceleration
Response of a Higgs kink to a static external force, 10:40609 (R;BR)
Quantization
Covariant Bogolyubov transformation and quantum excitation of real solitons, 10:40937 (R;SU;In Russian)

SOLUTES
Environmental Transport
General solute transport model and its applications in contaminant migration analysis, 10:40155 (R;US)

SOLVENT EXTRACTION
Reagents
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 10:39679 (R;US)

SOLVENT-REFINED COAL
Combustion
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)

SOLVENT-REFINED COAL PROCESS
See SRC PROCESS

SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SRC PROCESS

SORTING
Noise Pollution Control
Retrofit noise controls for crushing and screening plants, 10:38779 (RA;US)

SOUTH AMERICA
See also ARGENTINA
BRAZIL
Nuclear Trade
Legal aspects of nuclear technology transfer in connection with Latin America, 10:39390 (R;BE)
Technology Transfer
Legal aspects of nuclear technology transfer in connection with Latin America, 10:39390 (R;BE)

SOUTH CAROLINA
Continental Shelf
Outer Continental Shelf oil and gas activities in the Atlantic and their onshore impacts. Atlantic summary report, July 1, 1983-December 31, 1984, 10:38796 (R;US)
Electric Utilities
Region-specific study of the electric utility industry: financial history and future power requirements for the VACAR region, 10:39412 (R;US)
Region-specific study of the electric utility industry: problem identification, analysis, and recommendations, 10:39413 (R;US)
Region-specific study of the electric utility industry. Phase I, final report, 10:39411 (R;US)
SOUTH DAKOTA
Pegmatites
Chemistry of potassium feldspars from three zoned pegmatites, Black Hills, South Dakota: implications concerning pegmatite evolution, 10:40398 (J;GB)
SPACE HEATING
Control Equipment
Control systems and strategies for building heating: a review, 10:39433 (R;GB)
Energy Management
Control systems and strategies for building heating: a review, 10:39433 (R;GB)
SPACE LATTICES
See CRYSTAL LATTICES
SPACE POWER REACTORS
Test Facilities
Ground test facility for nuclear testing of space reactor subsystems, 10:39156 (R;US)
SPACE VEHICLES
Luminescence
Activated recombinative desorption: a potential component in mechanisms of spacecraft glow, 10:39728 (R;US)
Shielding
Use of chemical explosives for emergency solar flare shelter construction and other excavations on the Martian surface, 10:40412 (R;US)
SPANISH ORGANIZATIONS
Decree 3322/1971 of 23 December on the purposes of the National Uranium Enterprise, 10:38829 (R;XA;In Spanish)
SPARK COUNTERS
Specifications
Methodology of measuring high density of tracks in UVVVR neutron dosemeters, 10:39915 (RA;CS;In Czech)
SPARK GAPS
Breakdown
Vacuum spark breakdown model based on exploding metal wire phenomena, 10:40485 (R;NO)
SPECTRA (NEUTRON)
See NEUTRON SPECTRA
SPECTRA UNFOLDING
Computer Calculations
Supplements to Jupiter system software (Computerized spectra evaluation), 10:41086 (RA;CS;In Czech)
Li-Drifted Si Detectors
Unfolding of beta spectra measured with semiconductor detector, 10:39932 (RA;CS;In Czech)
SPECTRALLY SELECTIVE SURFACES
Holography
Holographic technology for solar energy concentration. Final report and 1983 annual report, 10:38999 (R;US)
SPECTROCHEMISTRY
See ABSORPTION SPECTROSCOPY
SPECTROMETERS
See also ALPHA SPECTROMETERS
BETA SPECTROMETERS
ELECTRON SPECTROMETERS
FISSION FRAGMENT SPECTROMETERS
GAMMA SPECTROMETERS
HEAVY ION SPECTROMETERS
MAGNETIC SPECTROMETERS
MASS SPECTROMETERS
NEUTRON SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
X-RAY SPECTROMETERS
Data Acquisition
Large capacity computer in relativistic nuclei spectrometers, 10:40017 (RA;SU;In Russian)
Data Processing
Large capacity computer in relativistic nuclei spectrometers, 10:40017 (RA;SU;In Russian)
Design
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
Fabrication
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
On-Line Measurement Systems
Large capacity computer in relativistic nuclei spectrometers, 10:40017 (RA;SU;In Russian)
Spectrometric research automatization in the JINR nuclear problem laboratory, 10:40018 (RA;SU;In Russian)
Operational Amplifiers
Spectrometric amplifiers, 10:40079 (R;SU;In Russian)
Preamplifiers
High-resistance low-noise resistor for spectrometers with a cooled semiconductor detector, 10:40089 (R;SU;In Russian)
Pulse Amplifiers
Spectrometric amplifiers, 10:40079 (R;SU;In Russian)
Semiconductor Detectors
High-resistance low-noise resistor for spectrometers with a cooled semiconductor detector, 10:40089 (R;SU;In Russian)
Shielding
Shielding for low-level spectrometry, 10:39965 (RA;CS;In Czech)
SPECTROSCOPY
See also ABSORPTION SPECTROSCOPY
ELECTRON SPECTROSCOPY
GAMMA SPECTROSCOPY
LASER SPECTROSCOPY
MASS SPECTROSCOPY
MESON SPECTROSCOPY
NEUTRON SPECTROSCOPY
X-RAY SPECTROSCOPY
Data Processing
Detection limits obtained using different search procedures (Spectra evaluation - search for peaks in background), 10:39963 (RA;CS;In Czech)
SPEED INDICATORS
See VELOCIMETERS
SPENT FUEL ELEMENTS
Burnup
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
Ceramography
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
Gamma Fuel Scanning
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
Mechanical Decladding
Mechanical separation process for decladding of LWR fuel elements, 10:38844 (R;DE;In German)
Metallography
Characterization of LWR spent fuel MCC-approved testing material - ATM-101. Revision 1, 10:38858 (R;US)
Radiochemical Analysis
Aiming toward perfection with POBSYS, a new software system (Destructive analysis of LWBR irradiated fuel rods), 10:39147 (R;US)
SPENT FUEL STORAGE
See also DRY STORAGE
Criticality
Criticality control in large tanks, 10:38860 (R;US)
Evaluation
Case studies in technology choice. Volume 4. Tennessee Valley Authority. Final report, 10:38847 (R;US)
Inventories
Computerised accountancy system for the Irradiated Fuel Cave at PFR at Dounreay, 10:38963 (R;GB)
Technology Assessment
Case studies in technology choice. Volume 4. Tennessee Valley Authority. Final report, 10:38847 (R;US)

Temperature Distribution
Thermal testing of simulated BWR consolidated fuel. Final report, 10:38848 (R;US)
SPENT FUELS
Dry Storage
Behavior of spent nuclear fuel and storage system components in dry interim storage. Revision 1, 10:38857 (R;US)
Fission Product Release
Proceedings of the third spent fuel workshop, 10:38932 (R;SE)
Monitored Retrievable Storage
Retrieval effects on ventilation and cooling requirements for a nuclear waste repository, 10:38874 (R;US)
Purex Process
Fast breeder reactor fuel reprocessing in France, 10:38840 (R;FR)
Reprocessing
Development of a continuous dissolution process for the new reprocessing plants at La Hague, 10:38839 (R;FR)
SPENT SHALES
Chemical Composition
Inorganic nitrogen in Green River formation oil shale, 10:38817 (R;US)
Health Hazards
Los Alamos environmental activities/oil shale effluents, 10:38818 (R;US)
SPHERES
Heat Transfer
Experimental investigations at small spheres for the determination of influences on the heat transfer and the heat destorage times in case of quenching, 10:39311 (R;DE;In German)
Quenching
Experimental investigations at small spheres for the determination of influences on the heat transfer and the heat destorage times in case of quenching, 10:39311 (R;DE;In German)
SPHEROMAK DEVICES
Magnetic Flux
Relaxation of spheromak plasmas toward a minimum-energy state through global magnetic fluctuations, 10:41041 (R;US)
Relaxation
Relaxation of spheromak plasmas toward a minimum-energy state through global magnetic fluctuations, 10:41041 (R;US)
Reviews
S-1 spheromak, 10:40987 (RA;US)
SPICULES
See SOLAR PROMINENCES
SPIDERS
Activation Analysis
Instrumental neutron activation analysis of spiders from the vicinity of Most and Trebon, 10:39654 (RA;CS;In Czech)
SPIN
Eigenfunctions
Manifest rotation symmetric expressions for angular momentum eigenfunctions, 10:40856 (R;NO)
Manifest rotation symmetric expressions for angular momentum eigenfunctions II, 10:40857 (R;NO)
SPRAY COATING
Health Hazards
Health-hazard evaluation report HETA 82-359-1382, Indiana and Michigan Power Company, Rockport Construction Project, Rockport, Indiana, 10:40322 (R;US)
SQUID DEVICES
Superconducting Quantum Interference Devices
Electric Impedance
Behavior of the dc impedance of an rf-biased resistive SQUID. Final report, 10:39733 (R;US)
Magnetic Flux
Quantum measurement problem and quantum fluids, 10:39738 (J;US)
Quantum Mechanics
Quantum measurement problem and quantum fluids, 10:39738 (J;US)
SRC PROCESS
Pilot Plants
Coking in coal liquefaction process equipment: a preliminary data correlation, 10:38665 (R;US)
ST TOKAMAK
Confinement Time
Experiments on the ST Tokamak, 10:40983 (RA;US)
STAGED COMBUSTION
Mixing
Determination of dispersion coefficients by transient helium tracer pulse, April 1985, 10:38766 (RA;US)
STAINLESS STEEL-21-6-9
Mechanical Properties
Mechanical threshold of dynamically deformed copper and Nitronic 40, 10:39549 (R;US)
STAINLESS STEEL-304
Corrosion Fatigue
Stress corrosion cracking and corrosion fatigue of sensitized Type-304 stainless steel in simulated BWR environments, 10:39501 (R;US)
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Fatigue
LCF behaviour of SS AISI 304 in the temperature range between 450 deg. C and 850 deg. C in connection with life time predictions, 10:39540 (RA;XA)
Low cycle fatigue studies on a type 304 stainless steel, 10:39539 (RA;XA)
Intergranular Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)
Lifetime
LCF behaviour of SS AISI 304 in the temperature range between 450 deg. C and 850 deg. C in connection with life time predictions, 10:39540 (RA;XA)
Mechanical Properties
Overview of fast reactor structural materials programme in India, 10:39527 (RA;XA)
Overview of U.S. LMFBR structural materials mechanical properties program, 10:39531 (RA;XA)
Review of mechanical properties and microstructures of types 304 and 316 stainless steel after long-term aging, 10:39533 (RA;XA)
Survey on structural material investigations for SNR 300, 10:39525 (RA;XA)
Microstructure
Review of mechanical properties and microstructures of types 304 and 316 stainless steel after long-term aging, 10:39533 (RA;XA)
Specifications
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Stress Corrosion
Analysis of the effects of corrosion potential and impurities on the stress corrosion cracking of Type 304 stainless steel, 10:39110 (R;US)
Stress corrosion cracking and corrosion fatigue of sensitized Type-304 stainless steel in simulated BWR environments, 10:39501 (R;US)
Temperature Effects
Stress corrosion cracking and corrosion fatigue of sensitized Type-304 stainless steel in simulated BWR environments, 10:39501 (R;US)
STAINLESS STEEL-304L
Mechanical Properties
Overview of fast reactor structural materials programme in India, 10:39527 (RA;XA)
STAINLESS STEEL-316
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Crack Propagation
Design considerations of short crack surface defects in AISI 316 stainless steel, 10:39546 (RA;XA)
Life extension of components with high cumulative fatigue usage, 10:39498 (R;US)

Creep
Analysis of the creep/fatigue behaviour of type 316 weld metal, 10:39543 (RA;XA)
Influence of grain size on the tensile and creep properties of a type 316 stainless steel, 10:39535 (RA;XA)
Low ductility creep failure in austenitic weld metals, 10:39538 (RA;XA)
Preliminary results of constant stress creep/fatigue tests on type 316 steel at 625 deg. C, 10:39545 (RA;XA)
Some observations on the relationship between microstructures, fatigue and creep behaviours in a type 316 stainless steel, 10:39544 (RA;XA)
UKAEA creep/fatigue work on austenitic type 316 steel, 10:39541 (RA;XA)
Deformation
Deformation behaviour of type 316 steel at 400 deg. C, 10:39534 (RA;XA)
Failures
Assessment of the linear damage summation method for creep-fatigue failure with reference to a cast of type 316 stainless steel tested at 570 deg. C, 10:39542 (RA;XA)
Fatigue
Analysis of the creep/fatigue behaviour of type 316 weld metal, 10:39543 (RA;XA)
Mechanisms of fatigue in metals under coal liquefaction conditions. Progress report, June 24-August 31, 1981, 10:38682 (R;US)
Preliminary results of constant stress creep/fatigue tests on type 316 steel at 625 deg. C, 10:39545 (RA;XA)
Some observations on the relationship between microstructures, fatigue and creep behaviours in a type 316 stainless steel, 10:39544 (RA;XA)
UKAEA creep/fatigue work on austenitic type 316 steel, 10:39541 (RA;XA)
Fracture Properties
Heat to heat variations in the creep rupture strength of a modified AISI 316 grade stainless steel, 10:39536 (RA;XA)
Stress rupture properties of austenitic steel weld metals, 10:39537 (RA;XA)
Heat Treatments
Heat to heat variations in the creep rupture strength of a modified AISI 316 grade stainless steel, 10:39536 (RA;XA)
Mechanical Properties
Overview of fast reactor structural materials programme in India, 10:39527 (RA;XA)
Overview of U.S. LMFBR structural materials mechanical properties program, 10:39531 (RA;XA)
Review of activities in France in the field of mechanical properties of structural materials, 10:39526 (RA;XA)
Review of mechanical properties and microstructures of types 304 and 316 stainless steel after long-term aging, 10:39533 (RA;XA)
Microstructure
Low ductility creep failure in austenitic weld metals, 10:39538 (RA;XA)
Review of mechanical properties and microstructures of types 304 and 316 stainless steel after long-term aging, 10:39533 (RA;XA)
Some observations on the relationship between microstructures, fatigue and creep behaviours in a type 316 stainless steel, 10:39544 (RA;XA)
Molybdenum Carbides
Molybdenum solubility differences in MC phases formed in titanium and niobium modified austenitic stainless steels determined using AEM, 10:39581 (J;US)
Niobium Additions
Molybdenum solubility differences in MC phases formed in titanium and niobium modified austenitic stainless steels determined using AEM, 10:39581 (J;US)
Specifications
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Surface Properties
Design considerations of short crack surface defects in AISI 316 stainless steel, 10:39546 (RA;XA)
Tensile Properties
Influence of grain size on the tensile and creep properties of a type 316 stainless steel, 10:39535 (RA;XA)
Titanium Additions
Molybdenum solubility differences in MC phases formed in titanium and niobium modified austenitic stainless steels determined using AEM, 10:39581 (J;US)
Welded Joints
Analysis of the creep/fatigue behaviour of type 316 weld metal, 10:39543 (RA;XA)

STAINLESS STEEL-316L
Compatibility
Nuclear Waste Management. Semiannual progress report, October 1984-March 1985, 10:38919 (R;US)

STAINLESS STEEL-347
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Specifications
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)

STAINLESS STEELS
See also STAINLESS STEEL-21-6-9
STAINLESS STEEL-304
STAINLESS STEEL-304L
STAINLESS STEEL-316
STAINLESS STEEL-316L
STAINLESS STEEL-347
STAINLESS STEEL-Z6CND17-12
STEEL-KH18N10T
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Cracks
Fracture mechanics limitations for short cracks and the non-propagating cracks, 10:39482 (R;FR)
Creep
Low ductility creep failure in austenitic weld metals, 10:39538 (RA;XA)
Fracture Mechanics
Fracture mechanics limitations for short cracks and the non-propagating cracks, 10:39482 (R;FR)
Fuel Reprocessing Plants
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Microstructure
Low ductility creep failure in austenitic weld metals, 10:39538 (RA;XA)
Specifications
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)

STAINLESS STEEL-Z6CND17-12
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Specifications
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)

STANDARD ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL

STANDARD MODEL
Lectures
Tests and present status of gauge theories, 10:40610 (R;DE)
Radiative Corrections
Testing the standard model via radiative corrections, 10:40622 (RA;DE)
Reviews
Summary talk on electroweak interactions and neutrino physics, 10:40572 (RA;DE)

STANDARDS
Decision Making
Development and revision of air quality standards with special attention to the NO_2 standard review, 10:40149 (RA;US)

STANDING CROP
See BIOMASS

STANFORD LINEAR COLLIDER
Beam Emittance
Beam emittance and beam disruption, 10:39826 (R;US)

Disruption angles, 10:39827 (R;US)
Beam Focusing Magnets
Some uses of REPMM's in storage rings and colliders, 10:39828 (R;US)
Beam Monitors
Beam position monitor readout and control in the SLC linac, 10:39881 (R;US)
Beam-Beam Interactions
Beam emittance and beam disruption, 10:39826 (R;US)
Disruption angles, 10:39827 (R;US)
Damping
Status of the SLC damping rings, 10:39802 (R;US)
Storage Rings
Status of the SLC damping rings, 10:39802 (R;US)
STAR CLUSTERS
Hertzsprung-Russell Diagram
Comparisons between observational color-magnitude diagrams and synthetic cluster diagrams for young star clusters in the Magellanic Clouds, 10:40426 (BA;NL)
STAR EVOLUTION
Helium Burning
Production and survival of ^{99}Tc in He-shell recurrent thermal pulses, 10:40414 (R;US)
Reviews
Some investigations about the Carson opacities, 10:40425 (BA;NL)
STAR MODELS
Mathematical models of stars.
Magnetohydrodynamics
Numerical simulations of stellar convective dynamos. II. Field propagation in the convection zone, 10:40423 (J;US)
STARS
Density
Some investigations about the Carson opacities, 10:40425 (BA;NL)
Opacity
Some investigations about the Carson opacities, 10:40425 (BA;NL)
Spherical Configuration
Problem of uniqueness of equilibrium stationary general relativistic fields, 10:40933 (R;CA)
STATE BUILDINGS
See PUBLIC BUILDINGS
STATE GOVERNMENT
Superfund
State participation in the Superfund remedial program, April 1985. Includes Addenda 1-6, 10:39380 (R;US)
STATES (ENERGY)
See ENERGY LEVELS
STATISTICAL MECHANICS
Monte Carlo Method
Early history of computer simulations in statistical mechanics, 10:41088 (R;US)
STEAM CONDENSERS
Performance
Condenser performance awareness, testing, and data evaluation, 10:39093 (RA;US)
STEAM GENERATORS
Mechanical Vibrations
Flow-induced vibration study in the LOFT steam generator, 10:39280 (R;US)
Natural Convection
Analysis of experimental data on condensation in an inverted U-tube. Final report, 10:39300 (R;US)
Reactor Materials
Studies and choice of structural materials for NSSS of BN reactors, 10:39532 (RA;XA)
Simulators
LOFT steam generator simulator and pump simulator performance during LOFT isothermal test Series L1, 10:39212 (R;US)
Thermal Stresses
Thermal EOR: a review of insulated tubing and downhole steam generator materials evaluations, 10:38790 (R;US)
Transients
Steam generator specification design transients, 10:39281 (R;US)
STEAM INJECTION
Heat Losses
Thermal EOR: a review of insulated tubing and downhole steam generator materials evaluations, 10:38790 (R;US)
STEAM LINES
Response Functions
Implicit finite element structural dynamic formulation for long-duration accidents in reactor piping systems, 10:39146 (R;US)
Ruptures
Effectiveness of recovery techniques during steam generator tube rupture in the Semiscale Mod-2B facility, 10:39289 (R;US)
Supports
LOFT feed and steam lines isolation snubbers support structure. Supplement A, 10:39269 (R;US)
STEAM TURBINES
Inspection
Application of turbine test results to improve performance, 10:39089 (RA;US)
Maintenance
Application of turbine test results to improve performance, 10:39089 (RA;US)
Performance
Diagnosis of turbine problems as determined from monitoring results, 10:39095 (RA;US)
Turbine performance monitoring methods and instrumentation, 10:39092 (RA;US)
Thermal Efficiency
Turbine performance monitoring methods and instrumentation, 10:39092 (RA;US)
STEEL INDUSTRY
See METAL INDUSTRY
STEEL-ASTM-A516
Corrosion
Prediction equations for corrosion rates of a A-537 and A-516 steels in Double Shell Slurry, Future PUREX, and Hanford Facilities Wastes, 10:38922 (R;US)
STEEL-ASTM-A537
Corrosion
Prediction equations for corrosion rates of a A-537 and A-516 steels in Double Shell Slurry, Future PUREX, and Hanford Facilities Wastes, 10:38922 (R;US)
STEEL-KH18N10T
Corrosion Resistance
Stainless steel forgings for nuclear chemical plants, 10:38837 (R;GB)
Specifications

CARBON STEELS
STAINLESS STEELS
STEEL-ASTM-A516
STEEL-ASTM-A537
Brittleness
Radiation brittleness mechanisms in structural steels in the presence of gaseous impurities, 10:39506 (R;SU;In Russian)
Deformation
Critical conditions for failure in materials subjected to high rates of loading. Final report, 15 August 1981-30 November 1984, 10:39478 (R;US)
Detonations
Multimaterial arbitrary Lagrangian Eulerian code MMALE and its application to some problems of penetration and impact, 10:40102 (R;US)
Dynamic Loads
Critical conditions for failure in materials subjected to high rates of loading. Final report, 15 August 1981-30 November 1984, 10:39478 (R;US)
Impact Shock
Multimaterial arbitrary Lagrangian Eulerian code MMALE and its application to some problems of penetration and impact, 10:40102 (R;US)

Materials Testing
Present status and future program on in-air FBR structural material tests, 10:39528 (RA;XA)
Mechanical Properties
Overview of fast reactor structural materials programme in India, 10:39527 (RA;XA)
Overview of UK programme on mechanical properties of fast reactor structural materials, 10:39530 (RA;XA)
Studies and choice of structural materials for NSSS of BN reactors, 10:39532 (RA;XA)
Physical Radiation Effects
Radiation brittleness mechanisms in structural steels in the presence of gaseous impurities, 10:39506 (R;SU;In Russian)
Powder Metallurgy
High energy rate densification and forming of metal powders. Final report, 1 June 1963-1 June 1966, 10:39477 (R;US)
Pressure Effects
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)
Response Functions
Comparison of analytical and experimental results from pressurization of a 1:8-scale steel containment model, 10:39366 (R;US)

STELLAR ATMOSPHERES
Excludes SOLAR ATMOSPHERE.
Cross Sections
Photo cross-sections for stellar atmosphere calculations - Compilation of references and data, 10:40403 (R;NO)

STELLARATOR MODEL C
Reviews
Experiments on the Model C Stellarator, 10:41043 (RA;US)

STELLARATORS
See also STELLARATOR MODEL C
Hybrid Systems
Stellarator hybrids, 10:41018 (J;US)
Plasma Simulation
Bounce-averaged Monte-Carlo calculations of ripple transport in stellarators, 10:41017 (J;AT)
Transport Theory
Bounce-averaged Monte-Carlo calculations of ripple transport in stellarators, 10:41017 (J;AT)
Trapping
Bounce-averaged Monte-Carlo calculations of ripple transport in stellarators, 10:41017 (J;AT)

STIMULATED EMISSION DEVICES
See GASERS
LASERS
MASERS

STOCHASTIC COOLING
Delay Circuits
Low dispersion notch filter for multi-GHz frequencies using fiber optics delays, 10:39804 (R;US)
Electric Filters
Low dispersion notch filter for multi-GHz frequencies using fiber optics delays, 10:39804 (R;US)
Frequency Response Testing
Measurement of frequency response of LBL stochastic cooling arrays for TeV-I storage rings, 10:39820 (R;US)

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE DEVICES (DATA)
See MEMORY DEVICES

STORAGE RINGS
See also LEP STORAGE RINGS
PEP STORAGE RINGS
SUPERCONDUCTING SUPER COLLIDER
VEPP-4
Beam Emittance
Physical requirements to be met by characteristics of beams and experimental zones in the accelerator-storage complex, 10:39884 (RA;SU;In Russian)
Beam Optics
Physical requirements to be met by characteristics of beams and experimental zones in the accelerator-storage complex, 10:39884 (RA;SU;In Russian)
Superconducting Magnets
Development and study of the UNK superconducting dipole models, 10:39883 (R;SU)

STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE

STORES
See COMMERCIAL BUILDINGS

STRAINS
Measuring Methods
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)

STRANGE PARTICLES
See also HYPERONS
Particle Production
Strange particle production in anti PP annihilation processes, 10:40506 (R;US)

STRATEGIC PETROLEUM RESERVE
Optional development strategies for the Strategic Petroleum Reserve, 10:38799 (R;US)

STREAK CAMERAS
Calibration
Technique for in situ calibration of an x-ray streak camera in the nanosecond regime using a high density Z-pinch, 10:40991 (J;US)

STREAK PHOTOGRAPHY
Improved approach to characterizing and presenting streak camera performance, 10:40990 (R;US)

STREAMER SPARK CHAMBERS
Calibration
Monte-Carlo simulation for the showers in the DELPHI (LEP) hadron calorimeter, 10:40030 (R;SU)
Cascade Showers
Monte-Carlo simulation for the showers in the DELPHI (LEP) hadron calorimeter, 10:40030 (R;SU)
Efficiency
Multi-prong star detection efficiency in a streamer chamber triggered by a hodoscopic detector, 10:39999 (R;SU;In Russian)
Some performance of plastic streamer tubes, 10:40003 (R;SU;In Russian)
Image Processing
Optical filtration of laser track shadowgrams in streamer chamber, 10:40029 (R;SU)
Particle Identification
Analysis of V^0-events registered in the streamer spectrometer SKM-200, 10:40028 (R;SU)
Performance Testing
Testing technique for streamer tubes of the DELPHI (LEP) hadron calorimeter, 10:40027 (R;SU;In Russian)
Readout Systems
Fast processor for preliminary data processing in filmless readout systems of streamer chambers, 10:40041 (RA;SU;In Russian)

STREAMS
See also RIVERS
Sediments
Evaluation of a hydrograph-shifting method for estimating suspended-sediment loads in Illinois streams, 10:40361 (R;US)
Fluvial sedimentation in Kentucky, 10:40190 (R;US)

STRESSES
Mechanics.
Measuring Methods
Determination of rock mass deformation modulus during hydraulic fracturing, 10:38923 (R;US)
Effects of microstructure on the acoustoelastic measurements of stress, 10:39523 (R;US)

STRONTIUM
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)

STRONTIUM 100
Radioactivity
Study of transitional nuclei at TRISTAN. Progress report, 10:40729 (R;US)

STRONTIUM 101
Radioactivity
Study of transitional nuclei at TRISTAN. Progress report, 10:40729 (R;US)

STRONTIUM 102
Radioactivity
Study of transitional nuclei at TRISTAN. Progress report, 10:40729 (R;US)
STRONTIUM 80
Distribution Functions
Retention of ^{60}Co, ^{85}Sr and ^{137}Cs on inorganic ion exchangers, 10:38892 (R;FR;In French)
STRONTIUM 90
Partition
Development of partitioning method; partitioning test with nuclear fuel reprocessing waste prepared at PNC, 2, 10:38901 (R;JP;In Japanese)
Radioecological Concentration
Freshwater exposure pathways in the Nordic countries, 10:40194 (R;NO)
STRONTIUM 99
Radioactivity
Study of transitional nuclei at TRISTAN. Progress report, 10:40729 (R;US)
STRONTIUM SULFATES
Activation Analysis
Methodological aspects and development of techniques for neutron activation analysis of microcomponents in materials of geologic origin, 10:39647 (R;AR;In Spanish)
STRUCTURAL MATERIALS
See BUILDING MATERIALS
STRUCTURE FUNCTIONS
Parton jet fragmentation at small momentum fraction (x), 10:40597 (R;DD)
STRUCTURES (BUILDINGS)
See BUILDINGS
STRUCTURES (MECHANICS)
See MECHANICAL STRUCTURES
SUBBITUMINOUS COAL
Activation Energy
Arrhenius activation energies of the reaction of low-rank coal chars and steam, 10:38680 (R;US)
SUBCONTRACTORS
See CONTRACTORS
SUBCRITICAL FLOW
See LAMINAR FLOW
SULFUR
Catalytic Effects
Laser fluorescence studies of the detailed flame chemistry of nitrogen, sulfur, and carbon. Final technical report, March 1, 1982-May 31, 1983, 10:39709 (R;US)
SULFUR 32 REACTIONS
Deep Inelastic Heavy Ion Reactions
Quasi-symmetric two-body fragmentation of the $^{32}S + ^{12}C$ and $^{32}S + ^{24}Mg$ composite systems, 10:40702 (RA;FR)
Fission
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Phase space model of angular distributions in heavy-ion-induced fission, 10:40767 (RA;FR)
Heavy Ion Fusion Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
SULFUR 32 TARGET
Giant Resonance
Isospin homogeneity of giant dipole resonances, 10:40681 (RA;SU;In Russian)
SULFUR CARBIDES
See CARBON SULFIDES
SULFUR DIOXIDE
Adsorption
Kinetics of sulfur and nitrogen reactions in combustion systems. Quarterly report No. 1, 10:39100 (R;US)
Air Pollution Control
Low temperature capture of SO_2 (EER), 10:39101 (RA;US)
Air Pollution Monitoring
State-of-the-art DAS lidar for SO_2 and NO_2, 10:40130 (R;DE)
Soil Chemistry
Integrated forest study on effects of atmospheric deposition. Project summary, 10:40162 (R;US)
SULFUR FLUORIDES
Diffusion
Data of very low wind velocity and of air tracer concentration in the diffusion experiments under very stable condition. September 1976-October 1981, 10:40142 (R;JP;In Japanese)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Beam Neutralization
New beam neutralization concept: laser photodetachment in a magnetic field, 10:40439 (R;US)
Photon-Ion Collisions
New beam neutralization concept: laser photodetachment in a magnetic field, 10:40439 (R;US)
SULFUR OXIDES
See also SULFUR DIOXIDE
Chemical Reaction Kinetics
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
Microwave Spectra
Millimeter-wave detection of free radicals using pulsed laser photolysis, 10:39682 (J;US)
SULFUR SULFIDES
See SULFUR
SUPER PHENIX REACTOR
Creys Malville, Isere, France
Breeding Ratio
Uncertainty analysis of parameters in a fast reactor using sensitivity calculations, 10:39151 (RA;BR;In Portuguese)
Enrichment
Optimization of enrichment zones that maximize the regeneration profits in a fast reactor, 10:39150 (RA;BR;In Portuguese)
Reactor Cores
Optimization of enrichment zones that maximize the regeneration profits in a fast reactor, 10:39150 (RA;BR;In Portuguese)
Sensitivity Analysis
Uncertainty analysis of parameters in a fast reactor using sensitivity calculations, 10:39151 (RA;BR;In Portuguese)
Simulation
Optimization of enrichment zones that maximize the regeneration profits in a fast reactor, 10:39150 (RA;BR;In Portuguese)
Uncertainty Principle
Uncertainty analysis of parameters in a fast reactor using sensitivity calculations, 10:39151 (RA;BR;In Portuguese)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Programming
Transistorized multigrid methods. I. Linear elliptic problems on two- and three-dimensional regions, 10:41082 (R;US)
SUPERCONDUCTING CABLES
Heat Transfer
Measurement of stationary heat transfer through insulation of a flat superconducting cable, 10:39722 (R;SU;In Russian)
SUPERCONDUCTING CAVITY RESONATORS
Superconducting-cavity-stabilized ruby maser oscillator, 10:39768 (R;US)
SUPERCONDUCTING FILMS
Thickness
Comment on "Transition-temperature oscillations in thin superconducting films", 10:39576 (J;US)
Transition Temperature
Comment on "Transition-temperature oscillations in thin superconducting films", 10:39576 (J;US)
SUPERCONDUCTING MAGNETS
Advances in cryogenic engineering. Volume 29, 10:39739 (B;US)
Performance Testing
Development and study of the UNK superconducting dipole models, 10:39883 (R;SU)

Three-Dimensional Calculations
Three-dimensional simulation of magnetic system elements of JINR superconducting synchrotron, 10:39794 (R;SU;In Russian)
SUPERCONDUCTING QUANTUM INTERFERENCE DEVI
See SQUID DEVICES
SUPERCONDUCTING SUPER COLLIDER
Beam Bending Magnets
Design and performance of 40 mm, 6.5 T, collared, cold-iron model magnets, 10:39799 (R;US)
Beam Dynamics
Feedback to suppress beam instabilities in future proton rings, 10:39822 (R;US)
Beam Focusing Magnets
Sextupole correction coils for SSC model dipoles, 10:39821 (R;US)
Feedback
Feedback to suppress beam instabilities in future proton rings, 10:39822 (R;US)
SUPERCONDUCTORS
Neutron Reactions
Neutron scattering studies of the heavy Fermion superconductors, 10:40930 (R;US)
SUPERCRITICAL GAS EXTRACTION
Chemical Reactions
Thermodynamic properties for supercritical coal conversion. Quarterly progress report, March 21-June 30, 1985, 10:38698 (R;US)
SUPERFUND
Implementation
State participation in the Superfund remedial program, April 1985. Includes Addenda 1-6, 10:39380 (R;US)
SUPERGIANT STARS
Radiation Pressure
Role of the radiation pressure gradient in giant and supergiant star evolution, 10:40427 (BA;NL)
Star Evolution
Role of the radiation pressure gradient in giant and supergiant star evolution, 10:40427 (BA;NL)
SUPERGRAVITY
Cosmological problems for spontaneously broken supergravity, 10:40404 (R;SU)
Lectures
Three lectures on supersymmetry and supergravity, 10:40942 (R;SE)
SUPERHEAVY ELEMENTS
See TRANS 104 ELEMENTS
SUPERHILAC
Beam Monitoring
On-line velocity measurements using phase probes at the SuperHILAC, 10:39866 (R;US)
Septum Magnets
Design of a three channel septum magnet, 10:39815 (R;US)
SUPERLATTICES
Dislocations
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Investigation of defects in GaAsP superlattice structures, 10:39002 (R;US)
Electron Mobility
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Electron Transfer
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Energy Gap
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Fabrication
Modulation-doped (Al,Ga)As/AlAs superlattice: Electron transfer into AlAs, 10:39631 (J;US)
Ion Channeling
Channeling analysis of strain in superlattices (Strained-layer superlattices), 10:39680 (R;US)
Line Defects
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Optical Microscopy
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
Photoluminescence
Elimination of dark line defects in lattice-mismatched epilayers through use of strained-layer superlattices, 10:39626 (J;US)
SUPERSONIC FLOW
Flow Models
Computation of low density, supersonic flow over a pitot tube, 10:40459 (R;US)
SUPERSYMMETRY
Prospects of theoretical particle physics, 10:40552 (RA;XC)
Gauge Invariance
No anomaly is observed, 10:40626 (R;SU)
Invariance Principles
Phenomenology of supersymmetry with broken R-parity, 10:40607 (R;GB)
Lattice Field Theory
2-d N=1 and 4-d N=2 Yang-Mills SUSY models on the lattice, 10:40621 (R;BR)
Lectures
Three lectures on supersymmetry and supergravity, 10:40942 (R;SE)
Neutrinos
Supersymmetric models without R parity, 10:40602 (R;GB)
Parity
Phenomenology of supersymmetry with broken R-parity, 10:40607 (R;GB)
Supersymmetric models without R parity, 10:40602 (R;GB)
Postulated Particles
Limits for supersymmetry from a comprehensive study of CERN missing-energy events, 10:40534 (R;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS
Stress Analysis
Faulted stress analysis of the LOFT Lower Core Support Plate, 10:39278 (R;US)
SURFACE AIR
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)
SURFACE CONTAMINATION MONITORS
Proportional Counters
Contamination monitors with proportional counters, 10:40065 (RA;CS;In Czech)
SURFACE MINING
Air Pollution
Dispersion of airborne particulates in surface coal mines: data analysis, 10:38729 (R;US)
Environmental Impacts
Hydrologic and water quality impacts of peat mining in North Carolina, 10:38738 (R;US)
Noise Pollution Control
Noise exposures of mobile machine operators in US surface coal mines and noise control techniques, 10:38773 (RA;US)
SURFACE PROPERTIES
Interactions
Mechanical interactions of rough surfaces. Quarterly progress report, April 1, 1985-June 30, 1985, 10:39761 (R;US)
SURFACE WATERS
See also LAKES
STREAMS
Acidification
Regional perspective on aquatic effects of acid deposition, 10:40182 (R;US)
Radiation Monitoring
Assessment of radioactivity in the environs of a titanium dioxide plant at Bunbury, Western Australia, 10:40193 (R;AU)
Radioactivity
Environmental monitoring at Hanford for 1984, 10:40197 (R;US)
Radionuclide Migration
Freshwater exposure pathways in the Nordic countries, 10:40194 (R;NO)

Water Quality
Pipeline gas demonstration plant, Phase I. Record environmental analysis report. Volume IV, 10:38669 (R;US)
Quality of water, Quillayute River basin, Washington, 10:40191 (R;US)
SURFACE-ACTIVE AGENTS
See SURFACTANTS
SURFACES
See also SPECTRALLY SELECTIVE SURFACES
Atom Collisions
Examination of the use of wave packets for the calculation of atom diffraction by surface. Annual technical report, 10:40433 (R;US)
Temperature dependence of diffracted-beam intensities in atom-surface scattering. Annual technical report, 10:40434 (R;US)
SURFACTANTS
Effect of surfactant washing on enhanced dewatering of fine coal, 10:38741 (R;US)
Study of the effects of additives on coal-water mixture atomization, 10:38739 (R;US)
Adsorption
Tertiary oil recovery processes research at the University of Texas. Final report, October 1980-December 1984, 10:38787 (R;US)
SUSPENSIONS
See also SLURRIES
Forecasting
Evaluation of a hydrograph-shifting method for estimating suspended-sediment loads in Illinois streams, 10:40361 (R;US)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEAT GLANDS
See SKIN
SWEDEN
Radioactive Materials
1984 Ordinance on nuclear activities (1984:14), 10:38955 (R;XA)
SWITCHING CIRCUITS
Fuses
Foil fuses as opening switches for slow discharge circuits, 10:39781 (R;US)
SWITZERLAND
Atomic Energy Laws
Ordinance of 28 November 1983 on protection in case of emergencies in the neighbourhood of nuclear installations, 10:39160 (R;XA;In French)
Nuclear Facilities
Ordinance of 18 January 1984 on definitions and licences in the atomic energy field, 10:39159 (R;XA;In French)
Ordinance of 5 December 1983 concerning funds for the decommissioning of nuclear installations, 10:39339 (R;XA;In French)
Ordinance of 14 March 1983 on the supervision of nuclear installations, 10:39161 (R;XA;In French)
Radiation Protection Laws
Modification of 28 November 1983 of the Radiation Protection ordinance of 30 June 1976, 10:40904 (R;XA;In French)
SYMPOSIA
See MEETINGS
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRON RADIATION
Uses
Synchrotron radiation and x-ray topography. Part II. Examples of some applications, 10:39496 (R;US)
X-Ray Diffraction
Synchrotron radiation and x-ray topography. Part II. Examples of some applications, 10:39496 (R;US)
SYNCHROTRONS

SERPUKHOV SYNCHROTRON
Beam Dynamics
Feedback to suppress beam instabilities in future proton rings, 10:39822 (R;US)
Beam Monitoring
Interference of edge proton radiation in synchrotron dipole magnets, 10:39810 (R;SU;In Russian)
Beam Transport
High energy beam transport system for a Heavy Ion Medical Accelerator, 10:40222 (R;US)
Feedback
Feedback to suppress beam instabilities in future proton rings, 10:39822 (R;US)
SYNTHANE PROCESS
Process Development Units
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
SYNTHETIC FUELS
Energy Policy
Synthetic fuels policy, 10:39403 (R;US)
Environmental Impacts
Ecological research program in advanced energy technologies: coal synthetic fuels. Summary of major issues and scientific research elements, 10:38727 (R;US)
SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

T

T-10 TOKAMAK
Impurities
Model of impurity diffusion in tokamaks, 10:40967 (R;SU;In Russian)
TANDEM MIRROR DEVICES
See TMX DEVICES
TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES
Plasma Diagnostics
Using perpendicular electron cyclotron emission to diagnose the thermal-barrier electrons in a tandem mirror, 10:41015 (J;AT)
Thermal Barriers
Using perpendicular electron cyclotron emission to diagnose the thermal-barrier electrons in a tandem mirror, 10:41015 (J;AT)
TANKS
Design
Design calculations for Sump Sampling System, 10:39216 (R;US)
Materials
Prediction equations for corrosion rates of a A-537 and A-516 steels in Double Shell Slurry, Future PUREX, and Hanford Facilities Wastes, 10:38922 (R;US)
TANTALUM
Neutron Reactions
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)
Superlattices
Metallic multilayers and superlattices, 10:39495 (R;US)
TANTALUM 180
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
TANTALUM 181
Hyperfine Structure
Influence of the (n,γ) reaction-induced defects on hyperfine interaction of ^{181}Ta in YFe_2, 10:40752 (RA;SU;In Russian)
TANTALUM 181 TARGET
Carbon 12 Reactions
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)

Neon 22 Reactions
Direct processes in heavy ion reactions, 10:40762 (RA;SU;In Russian)
Study on reaction mechanism of incomplete fusion reactions; with reaction channel isolation on X-ray radiation of residual nuclei, 10:40761 (RA;SU;In Russian)

TANTALUM ALLOYS
See also TANTALUM BASE ALLOYS
Microstructure
Energy-beam processing studies on Ta/U and Ir/Ta systems, 10:39580 (J;US)

TANTALUM ALLOY-T111
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

TANTALUM BASE ALLOYS
See also TANTALUM ALLOY-T111
Compatibility
Compatibility of refractory metals with sodium in the presence of oxygen and UO_2, 10:39562 (R;US)

Half-Life
Light mass elements total half-lives for selected long-lived nuclides, 10:40668 (R;US)

TELLURIUM 124
Energy Levels
Structure of excited states of tellurium even isotopes (/sup 118,120,122,124,126/Te isotopes), 10:40735 (RA;SU;In Russian)

TELLURIUM 126
Energy Levels
Structure of excited states of tellurium even isotopes (/sup 118,120,122,124,126/Te isotopes), 10:40735 (RA;SU;In Russian)
TELLURIUM 128
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
TELLURIUM 130
Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)
TELLURIUM ALLOYS
Chemical Composition
Composition profile determination in isomorphous binary alloys, 10:39522 (R;BR;In Portuguese)
Crystal Growth
Pb /sub 1-x/ Sn /sub x/ Te monocrystal growth by vapor phase transport, with formation of a liquid/solid growth interphase, 10:39521 (R;BR;In Portuguese)
TEM (MICROSCOPY)
See TRANSMISSION ELECTRON MICROSCOPY
TEMPERATURE DEPENDENCE
Correlations
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report (II year), March 1-May 31, 1985, 10:39693 (R;US)
TEMPERATURE DISTRIBUTION
Variational Methods
Temperature distribution in cylindrical fuel rods - A variational treatment, 10:39193 (RA;BR;In Portuguese)
TENDONS (STRUCTURAL)
See CABLES
TENNESSEE
Earthquakes
Focal mechanism analyses for Virginia and eastern Tennessee earthquakes (1978-1984), 10:40378 (R;US)
Water Supply
Drought-related impacts on municipal and major self-supplied industrial water withdrawals in Tennessee. Parts A and B, 10:40362 (R;US)
TENNESSEE VALLEY AUTHORITY
Energy Management
Energy management annual report, fiscal year 1984, 10:39432 (R;US)
TENNESSEE VALLEY REGION
Forests
Assessment of potential biomass energy impacts on the forest resource of the 201-county Tennessee Valley region, 10:39003 (R;US)
TERBIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Electronic Structure
Role of the electronic structure in the relative easiness of the glide systems in hexagonal close-packed metals, 10:39485 (R;FR;In French)
Neutron Reactions
Pygmy resonance appeared in keV-neutron capture γ-ray spectra of nuclei N = 82 - 126, 10:40660 (RA;JP)
Plasticity
Role of the electronic structure in the relative easiness of the glide systems in hexagonal close-packed metals, 10:39485 (R;FR;In French)
TERBIUM 159 TARGET
Nitrogen 14 Reactions
Partition of cross sections in asymmetric nucleus-nucleus reactions and the origin of fast alpha particles, 10:40751 (R;US)
TERBIUM COMPOUNDS
Fluorescence
Ce^{+3}- and Tb^{+3}-luminescence in glasses. Ce^{+3}-activated bulk silica and silica thin films. An α-particle detector based on a Ce^{+3}-activated silica thin film. A Ce^{+3}-Tb^{+3}-energy transfer in a high melting point phosphate glass, 10:39889 (R;FR)
TEST FACILITIES
Maintenance
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Modifications
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
Operation
Operation and maintenance of DOE/PETC Combustion Test Facilities. Final activity report, December 20, 1982-January 18, 1985, 10:38762 (R;US)
TESTING (BIOLOGICAL)
See BIOASSAY
TESTING (MATERIALS)
See MATERIALS TESTING
TETRAHYDRONAPHTHALENE
See TETRALIN
TETRALIN
Dehydrogenation
Chemistry of the extractive phase of two-stage coal liquefaction. Quarterly report, October 3, 1983-December 31, 1983, 10:38688 (R;US)
Chemistry of the extractive phase of two stage liquefaction, 10:38689 (R;US)
Vapor Pressure
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Seventh quarterly progress report, March 1-June 1, 1985, 10:38714 (R;US)
TEVATRON
See FERMILAB TEVATRON
TEXAS
Uranium Deposits
Implications of the geology and geochemistry of the Maclean Five uranium deposit, Three Rivers, Texas, 10:38826 (R;US)
TEXTOR TOKAMAK
Limiters
Progress report on pump limiter developments for the TEXTOR tokamak: ALT-I, 10:41051 (J;US)
TFTR DEVICE
See TFTR TOKAMAK
TFTR REACTORS
See TFTR TOKAMAK
TFTR TOKAMAK
Ballooning Instability
Effects of trapped alpha particles on ballooning modes in tokamaks, 10:40977 (R;US)
Eddy Currents
Vacuum vessel eddy current modeling for TFTR adiabatic compression experiments, 10:41040 (R;US)
Equilibrium
Princeton spectral equilibrium code: PSEC, 10:41008 (J;US)
Neutral Atom Beam Injection
Initial studies of confinement, adiabatic compression, and neutral-beam heating in TFTR, 10:40988 (RA;US)
Plasma Confinement
Initial studies of confinement, adiabatic compression, and neutral-beam heating in TFTR, 10:40988 (RA;US)
Reviews
Initial studies of confinement, adiabatic compression, and neutral-beam heating in TFTR, 10:40988 (RA;US)
Trapped-Particle Instability
Effects of trapped alpha particles on ballooning modes in tokamaks, 10:40977 (R;US)
THALLIUM 201
Isotope Production
Production of short-lived radiopharmaceuticals with CV-28 cyclotron. Final report for the period 1 June 1981-14 July 1984, 10:39701 (R;XA)
THALLIUM 205
Energy Levels
Nuclear data sheets for A = 205, 10:40774 (J;US)

Energy-Level Transitions
Nuclear data sheets for A = 205, 10:40774 (J;US)
THALLIUM 207
Isomer Shift
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
M1-Transitions
Contribution of collective freedom degrees to the one-particle matrix elements for near-magic nuclei, 10:40770 (R;SU;In Russian)
THERMAL CONDUCTIVITY
Correlations
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report (II year), March 1-May 31, 1985 (For several hydrocarbons, alcohols, etc.), 10:39693 (R;US)
Temperature Dependence
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report (II year), March 1-May 31, 1985 (For several hydrocarbons, alcohols, etc.), 10:39693 (R;US)
THERMAL DECOMPOSITION
See PYROLYSIS
THERMAL DIFFUSION
Phenomenon in which a temperature gradient in a mixture of fluids gives rise to a flow of one constituent relative to the mixture as a whole.
Research Programs
[Study of multicomponent diffusion and transport phenomena]. Progress report, 10:39473 (R;US)
THERMAL DIFFUSIVITY
The quantity of heat passing normally through a unit area per unit time divided by the product of specific heat, density, and temperature gradient.
Measuring Methods
In situ investigation of transport in semiconductors: A contactless approach, 10:39627 (J;US)
THERMAL ENERGY STORAGE EQUIPMENT
Freeze Protection
Calculation of freeze safety of water-filled thermal reservoirs in basements under high-altitude Alpine climate conditions, 10:39030 (R;AT;In German)
THERMAL NEUTRONS
Inelastic Scattering
Thermal neutron scattering in MBBA and EBBA solid phases, 10:40877 (R;SU;In Russian)
Neutron Diffraction
Thermal neutron scattering in MBBA and EBBA solid phases, 10:40877 (R;SU;In Russian)
Optimization
Thermal flux maximization in the central irradiation chamber of a radioisotope production reactor, 10:39234 (RA;BR;In Portuguese)
THERMAL PHOTOGRAPHY

THERMOCHEMICAL DIAGRAMS
Hydrogen from coal via Tin Redox. Energy Related Inventions Program Invention No. 3. Final report, 10:38977 (R;US)
THERMOCOUPLES
Specifications
R and D advances in high temperature thermocouples for nuclear utilization in severe environment, 10:39185 (R;FR)
Thermal Insulation
R and D advances in high temperature thermocouples for nuclear utilization in severe environment, 10:39185 (R;FR)
THERMOLUMINESCENCE
Energy Levels
New method of calculating parameters of electron capture levels of thermoluminescence materials using double-temperature annealing, 10:39921 (RA;CS;In Czech)
THERMOLUMINESCENT DOSEMETERS
Reassessment of radiation doses measured by TLD, 10:39955 (RA;IL)
Computerized Control Systems
Automated/computerized TLD-monitoring system in Boris Kidric Institut - Vinca, 10:39967 (RA;AT)
Data Processing
Automated/computerized TLD-monitoring system in Boris Kidric Institut - Vinca, 10:39967 (RA;AT)
Dose-Response Relationships
Dosimetric energy response of $CaSO_4$; Dy thermoluminescence dosimeters to alpha particles, 10:39887 (R;EG)
Fabrication
Preparation of $CaSO_4$-Dy and one of the possibilities of manufacturing TL gamma detectors, 10:39943 (RA;CS;In Czech)
Response Functions
Response of thermoluminescent detectors to fast neutrons, 10:39952 (RA;CS;In Czech)
Thermoluminescent detector response to high-energy charged particles, 10:39939 (RA;CS;In Czech)
Sensitivity
Thermoluminescence tubes for personnel dosimetry, 10:39914 (RA;CS;In Czech)
Thermoluminescent detector response to high-energy charged particles, 10:39939 (RA;CS;In Czech)
THERMOMETERS
Design
Technical cryogenic thermometers on the basis of commercial TVO resistors, 10:39724 (R;SU;In Russian)
Performance
Technical cryogenic thermometers on the basis of commercial TVO resistors, 10:39724 (R;SU;In Russian)

THIN FILMS
Materials Testing
Research and developmental study on MIS thin film solar cells of amorphus hydrogenated silicon. Pt. 2, 10:38996 (R;DE;In German)
THIONAPHTHENES
Hydrogenation
Regioselective hydrogenation of polynuclear heteroaromatic compounds catalyzed by polymer-supported transition metal complexes: initial rates, mechanism of reduction, model coal liquid experiment, role of p-cresol in rate enhancement of nitrogen ring reduction, catalytic transfer hydrogenation, 10:38704 (R;US)
THIRRING MODEL
Energy-Momentum Tensor
About quantum energy-momentum tensor for the Thirring model, 10:40631 (R;SU;In Russian)
THORAX
See CHEST
THORIUM
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Optimization of delayed neutron detection units for activation analysis of uranium and thorium, 10:40061 (RA;XA)
Alpha Spectroscopy
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Delayed Neutron Analysis
Optimization of delayed neutron detection units for activation analysis of uranium and thorium, 10:40061 (RA;XA)
Detection
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Distribution
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)

Uranium and thorium distribution patterns and lithogeochemistry of Devonian granites in the Chedabucto Bay area, Nova Scotia, 10:38820 (RA;CA)

Geochemistry
Thorium species on basalt surfaces, 10:38911 (RA;US)

Ion-Atom Collisions
Anomalous positron peaks from supercritical collision systems, 10:40444 (R;DE)

Neutron Transport Theory
Discrepancies in the critical parameters in the utilization of different sets of cross sections, 10:39182 (RA;BR;In Portuguese)

Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)

Solvent Extraction
Dissolution of thorium/uranium mixed oxide in nitric acid-hydrofluoric acid solution, 10:39677 (R;BR;In Portuguese)

THORIUM 230

Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

THORIUM 232

Delayed Neutron Analysis
Metrological parameters for the delayed neutron method of analysis of geological structures for uranium, 10:39649 (RA;XA)

Half-Life
Heavy mass elements total half-lives for selected long-lived nuclides, 10:40724 (R;US)

Neutron Reactions
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{232}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)

THORIUM 232 TARGET

Boron 11 Reactions
High-energy particle emission and search for the ^{10}He nuclei in heavy ion reactions, 10:40695 (RA;SU;In Russian)

THORIUM D
See LEAD 208

THORIUM IONS

Ion-Atom Collisions
Anomalous positron peaks from supercritical collision systems, 10:40444 (R;DE)

THORIUM OXIDES
See also URANOTHORIANITE

Density
High accuracy measurements of bulk densities of ThO_2 and (Th, U)O_2 microspheres by mercury pycnometry, 10:39705 (R;JP;In Japanese)

Dissolution
Dissolution of thorium/uranium mixed oxide in nitric acid-hydrofluoric acid solution, 10:39677 (R;BR;In Portuguese)

Emission Spectroscopy
X-ray fluorescence spectrometric and optical emission spectographic analysis of thoria in thoriated copper metal powder, 10:39644 (R;IN)

Powder Metallurgy
High energy rate densification and forming of metal powders. Final report, 1 June 1963-1 June 1966, 10:39477 (R;US)

X-Ray Fluorescence Analysis
X-ray fluorescence spectrometric and optical emission spectographic analysis of thoria in thoriated copper metal powder, 10:39644 (R;IN)

THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA

Electrical Equipment
Three Mile Island technical information and examination program instrumentation and electrical summary report, 10:39303 (R;US)

Reactor Instrumentation
Three Mile Island technical information and examination program instrumentation and electrical summary report, 10:39303 (R;US)

THULIUM

Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)

TIGHT SANDS

TIHANGE REACTOR
Tihange, Liege, Belgium

Reactor Safety
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)

Safety Engineering
Implementation of safety parameter display systems in Belgian nuclear power plants, 10:39317 (RA;HU)

TIHANGE-1 REACTOR
See TIHANGE REACTOR

TIME PROJECTION CHAMBERS
See PROJECTION SPARK CHAMBERS

TIME-OF-FLIGHT SPECTROMETERS

On-Line Measurement Systems
Scintillation time-of-flight spectrometer on-line with KM 001 microcomputer and SM-3 minicomputer, 10:40000 (R;SU;In Russian)

Scintillation Counters
Scintillation time-of-flight spectrometer on-line with KM 001 microcomputer and SM-3 minicomputer, 10:40000 (R;SU;In Russian)

TIN 116 TARGET

Oxygen 16 Reactions
Exclusive measurements in incomplete fusion reactions of Sn with ^{16}O at 5.6, 6.2 and 7.8 MeV/A, 10:40726 (RA;FR)

TIN 118 TARGET

Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

TIN 119 TARGET

Proton Reactions
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

TIN 120 TARGET

Proton Reactions
Description of double differential cross sections of reactions with complex particles in a formalism of multistage direct processes with account for the coalescence mechanism, 10:40738 (RA;SU;In Russian)
Nuclei and isomers production cross sections ratio in (p,xyz) reactions with Esub(p) = 72 MeV (sup(110)Cd, sup(111)Cd, sup(112)Cd, sup(114)Cd, sup(116)Cd, sup(118)Sn, sup(119)Sn, sup(120)Sn), 10:40746 (RA;SU;In Russian)

Silicon 28 Reactions
Behaviour of ^{144}Gd at very high angular momentum. Study of the continuum, 10:40728 (R;FR;In French)

TIN 124 TARGET

Oxygen 16 Reactions
Competition between peripheral and central emission in incomplete fusion reactions, 10:40727 (RA;FR)
Exclusive measurements in incomplete fusion reactions of Sn with ^{16}O at 5.6, 6.2 and 7.8 MeV/A, 10:40726 (RA;FR)

Uranium 238 Reactions
Deep inelastic collisions of heavy ions and positron production at bombarding energies close to the Coulomb barrier, 10:40745 (RA;SU)
Structure effects in ^{238}U-induced dissipative collisions, 10:40731 (R;DE)

TIN ALLOYS
See also TIN BASE ALLOYS

Chemical Composition
Composition profile determination in isomorphous binary alloys, 10:39522 (R;BR;In Portuguese)

Crystal Growth
Pb /sub 1-x/ Sn /sub x/ Te monocrystal growth by vapor phase transport, with formation of a liquid/solid growth interphase, 10:39521 (R;BR;In Portuguese)
Magnetic Properties
Coexistence of ordered magnetism and superconductivity in Pd_3YbSn, 10:39575 (J;US)
Superconductivity
Microcrystallography and chemical microanalysis of polycrystalline Nb_3Sn superconductors, 10:39583 (J;US)

TIN BASE ALLOYS
Fermi Level
Analysis of the series of moderately heavy fermion materials: $CeSn_3$, USn_3, and $NpSn_3$, 10:39491 (R;US)

TIN ISOTOPES
Photonuclear Reactions
Measurement of photonuclear cross sections from 30 to 140 MeV for intermediate and heavy mass nuclei (Sn, Ce, Ta, Pb and U), 10:40769 (R;FR;In French)
Sulfur 32 Reactions
Analysis of fusion and deep-inelastic collisions of heavy ions with the extended surface friction model, 10:40725 (RA;FR)

TISSUE EQUIVALENT CHAMBERS
See BRAGG GRAY CHAMBERS

TISSUE-EQUIVALENT MATERIALS
Lyoluminescence
Practical applications of lyoluminescence, 10:40284 (RA;CS;In Czech)
Neutron Dosimetry
Inspection of Bragg-Gray theory applicability to the ionization chamber, irradiated by approximately 20 MeV neutrons, 10:40913 (RA;SU;In Russian)
Investigation of radiation dose fields from the fast neutron beams obtained from d(50 MeV) → Be reaction, 10:40912 (RA;SU;In Russian)

TISSUES
Electron Diffraction
Application of electron diffraction to crystal identification in pathologic tissues, 10:40234 (RA;CA)
Pathology
Application of electron diffraction to crystal identification in pathologic tissues, 10:40234 (RA;CA)
Radiation Doses
Analysis of the ability of current health physics instruments to predict dose in exposed individuals, 10:40045 (R;US)
Radiation Injuries
Radiation effects in cells and tissues, 10:40288 (RA;CA)
Scanning Electron Microscopy
Can the S.T.E.M. ratio technique be useful for imaging unstained biological specimens, 10:40239 (RA;CA)
Transmission Electron Microscopy
Can the S.T.E.M. ratio technique be useful for imaging unstained biological specimens, 10:40239 (RA;CA)
X-Ray Emission Analysis
Applications of electron probe x-ray analysis in pathology, 10:40238 (RA;CA)

TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
See also PLZT
PZT
Superconductivity
Josephson effect in the unusual superconductors $Lu_2Fe_3Si_5$, $LiTi_2O_4$, and UBe_{13}, 10:40931 (R;US)

TITANIUM 48 TARGET
Oxygen 16 Reactions
Nearside-farside analyses of heavy-ion direct reactions to the continuum, 10:40765 (RA;FR)
Sulfur 32 Reactions
"One dimensional" model for heavy ion reactions, 10:40750 (RA;FR)

TITANIUM ADDITIONS

URANIUM
See also DEPLETED URANIUM
ENRICHED URANIUM
URANIUM-ALPHA
Absorption Spectra
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
Activation Analysis
Optimization of delayed neutron detection units for activation analysis of uranium and thorium, 10:40061 (RA;XA)
Alpha Spectroscopy
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Delayed Neutron Analysis
Optimization of delayed neutron detection units for activation analysis of uranium and thorium, 10:40061 (RA;XA)
Detection
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Diffusion
Diffusion in clay - experimental techniques and theoretical models, 10:40173 (R;SE)
Distribution
Studies on precambrian granites and sedimentary rocks by means of the fission track method and alpha spectrometry, 10:38828 (R;DE;In German)
Uranium and thorium distribution patterns and lithogeochemistry of Devonian granites in the Chedabucto Bay area, Nova Scotia, 10:38820 (RA;CA)
Excited States
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
Flotation
Flotation of phosphorous-uraniferous minerals from Itataia, 10:38830 (R;BR;In Portuguese)
Impact Tests
Steady-wave risetime and spall measurements on uranium (3-15 GPA), 10:39558 (R;US)
Inertial Confinement
Synthesis of heavy and superheavy elements via inertial confinement of uranium matter, 10:40790 (RA;SU)
Ion-Atom Collisions
Anomalous positron peaks from supercritical collision systems, 10:40444 (R;DE)
Laser Spectroscopy
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
Market
Prospects for Canadian uranium, 10:38861 (R;CA)
Measuring Methods
Confirmatory measurements of special nuclear materials, 10:38954 (R;US)
Neutron Transport Theory
Discrepancies in the critical parameters in the utilization of different sets of cross sections, 10:39182 (RA;BR;In Portuguese)
Nondestructive Analysis
Uranium concentration monitor manual: 2300 system, 10:38959 (R;US)
Nuclear Materials Management
Confirmatory measurements of special nuclear materials, 10:38954 (R;US)
Uranium concentration monitor manual: 2300 system, 10:38959 (R;US)
Nuclear Trade
Political and legal problems of international nuclear supply agreements: the Euratom experience, 10:38863 (R;BE)
Pressure Measurement
X-ray fluorescent determination of uranium in the gaseous phase, 10:39687 (J;NL)
Radiation Absorption Analysis
Equipment for monitoring uranium concentration in solutions using soft gamma-ray absorption, 10:39660 (RA;CS;In Czech)
Radionuclide Kinetics
Further developments on improved metabolic models for uranium metabolism in man, 10:40271 (RA;US)
Solubility
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)

Solvent Extraction
By-product recovery of uranium from wet-process phosphoric acid, 10:38833 (BA;US)
Chemistry of actinides and lanthanides. New extractants and separation methods, 10:38838 (R;FR)
Dissolution of thorium/uranium mixed oxide in nitric acid-hydrofluoric acid solution, 10:39677 (R;BR;In Portuguese)
Process for uranium recovery in phosphoric acid, 10:38831 (R;BR;In Portuguese)
Uranium extraction in phosphoric acid, 10:38832 (R;BR;In Portuguese)
Sorption
Determination of the solubilities and degrees of sorption of uranium, plutonium, americium and neptunium under near-field conditions for disposal, 10:39700 (R;GB)
X-Ray Fluorescence Analysis
X-ray fluorescent determination of uranium in the gaseous phase, 10:39687 (J;NL)

URANIUM 233 TARGET
Neutron Reactions
Prompt neutron spectra for the energy range 10 keV - 3 MeV from ^{239}Pu and ^{233}U fission by thermal neutrons, 10:40780 (RA;XA)

URANIUM 235
Delayed Neutron Analysis
Metrological parameters for the delayed neutron method of analysis of geological structures for uranium, 10:39649 (RA;XA)
Laser Isotope Separation
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
Nondestructive Analysis
Measurement of enriched uranium and uranium-aluminum fuel materials with the AWCC, 10:38961 (R;US)

URANIUM 235 TARGET
Alpha Reactions
Study on probability of the actinide nuclei fission by 40-80 MeV α-particles, 10:40792 (RA;SU;In Russian)
Neutron Reactions
Investigation of emission neutron spectra for ^{235}U at incident neutron energy of 4.9 MeV, 10:40779 (RA;XA)

URANIUM 236
Fission
Dissipative phenomena and kinetic energy, mass and charge equilibration in fission, 10:40786 (RA;SU)

URANIUM 236 TARGET
Alpha Reactions
Study on probability of the actinide nuclei fission by 40-80 MeV α-particles, 10:40792 (RA;SU;In Russian)
Neutron Reactions
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{232}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)

URANIUM 238
Delayed Neutron Analysis
Metrological parameters for the delayed neutron method of analysis of geological structures for uranium, 10:39649 (RA;XA)

URANIUM 238 REACTIONS
Deep Inelastic Heavy Ion Reactions
Structure effects in ^{238}U-induced dissipative collisions, 10:40731 (R;DE)
Fission Fragments
Emission of light and energetic medium masses in multiparticle exit channels in the reactions ^{238}U+sup(nat)U and ^{238}U+Au at 16.7 MeV/N energy, 10:40776 (RA;FR)
Particle Production
Deep inelastic collisions of heavy ions and positron production at bombarding energies close to the Coulomb barrier, 10:40745 (RA;SU)
Ternary Fission
Investigation of the dynamics of ternary fission for the system ^{238}U + ^{238}U, 10:40803 (RA;FR)

URANIUM 238 TARGET
Alpha Reactions
Determination of energy dependence on unresolved resonance density, 10:40782 (RA;SU;In Russian)
Argon 40 Reactions
Phase space model of angular distributions in heavy-ion-induced fission, 10:40767 (RA;FR)
Carbon 12 Reactions
Independent cross sections of alkali isotopes produced in various targets bombarded by ^{12}C and ^{16}O ions up to 77 MeV per nucleon, 10:40744 (RA;SU)
Iron 56 Reactions
Reaction mechanism studies of heavy ion induced nuclear reactions. Annual progress report, 10:40712 (R;US)
Neutron Reactions
Covariance matrix of experimental data on the energy dependence of ν-barsub(p) for neutron-induced fission of the nuclei ^{232}Th, ^{236}U, ^{238}U, ^{237}Np, 10:40781 (RA;XA)
Oxygen 16 Reactions
Dynamical limitations to heavy ion fusion, 10:40773 (RA;SU)
Uranium 238 Reactions
Investigation of the dynamics of ternary fission for the system ^{238}U + ^{238}U, 10:40803 (RA;FR)

URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Fermi Level
Analysis of the series of moderately heavy fermion materials: $CeSn_3$, USn_3, and $NpSn_3$, 10:39491 (R;US)
Microstructure
Energy-beam processing studies on Ta/U and Ir/Ta systems, 10:39580 (J;US)

URANIUM BASE ALLOYS
Crystal Lattices
Mossbauer effect and neutron diffraction study of the anomalous lattice behavior of U_6Fe, 10:39490 (R;US)
Embrittlement
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)
Extrusion
Hydrostatic extrusion of amorphous $Fe_{82}B_{12}Si_6$ and $U_{70}Cr_{30}$ ($Fe_{82}B_{12}Si_6$; $U_{70}Cr_{30}$), 10:39567 (R;US)
Stress Corrosion
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)

URANIUM DEPOSITS
Exploration
Environmental issues related to uranium mining, 10:38943 (RA;CA)
Implications of the geology and geochemistry of the Maclean Five uranium deposit, Three Rivers, Texas, 10:38826 (R;US)
Geochemistry
Implications of the geology and geochemistry of the Maclean Five uranium deposit, Three Rivers, Texas, 10:38826 (R;US)
Geology
Implications of the geology and geochemistry of the Maclean Five uranium deposit, Three Rivers, Texas, 10:38826 (R;US)
Mining
Environmental issues related to uranium mining, 10:38943 (RA;CA)
Origin
Age and origin of pitchblende from the Gunnar Deposit, Saskatchewan, 10:38822 (RA;CA)
Petrology
Implications of the geology and geochemistry of the Maclean Five uranium deposit, Three Rivers, Texas, 10:38826 (R;US)
Radiometric Surveys
Recognition of uranium concentration processes in granites and related rocks using airborne radiometric measurements, 10:38827 (RA;CA)

URANIUM DIOXIDE
Carburization
Carburization of UO_2 kernels in cracked particles and its effect on xenon release, 10:39132 (R;JP)

URANIUM HEXAFLUORIDE
Compressible Flow
Rotating compressible flows with internal sources and sinks, 10:38836 (J;GB)
Laser Spectroscopy
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)

Raman Spectra
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
Vibrational States
Laser spectroscopy of U and UF_6, 10:39704 (R;JP)
URANIUM IONS
Ion-Atom Collisions
Anomalous positron peaks from supercritical collision systems, 10:40444 (R;DE)
URANIUM ISOTOPES
See also URANIUM 235
URANIUM 236
URANIUM 238
Argon 40 Reactions
Investigation of linear momentum transfer on the Ar + U system at 44 MeV/u, 10:40777 (RA;FR)
Isotope Separation
Decree 3322/1971 of 23 December on the purposes of the National Uranium Enterprise, 10:38829 (R;XA;In Spanish)
Laser Isotope Separation
Science, technology, and the industrialization of laser-driven processes, 10:38835 (R;US)
Photonuclear Reactions
Measurement of photonuclear cross sections from 30 to 140 MeV for intermediate and heavy mass nuclei (Sn, Ce, Ta, Pb and U), 10:40769 (R;FR;In French)
Uranium 238 Reactions
Emission of light and energetic medium masses in multiparticle exit channels in the reactions $^{238}U+sup(nat)U$ and $^{238}U+Au$ at 16.7 MeV/N energy, 10:40776 (RA;FR)
URANIUM MINES
Occupational Safety
Costs of uncertainty: regulating health and safety in the Canadian uranium industry. 10:38953 (R;CA)
Radiation Protection Laws
Code of Practice on Radiation Protection in the Mining and Processing of Mineral Sands (1982) (Western Australia), 10:39399 (R;XA)
Mines Safety Control (Radiation Protection) Regulations (Northern Territory) No. 30 of 25 September 1981, 10:38956 (R;XA)
Regulations
Costs of uncertainty: regulating health and safety in the Canadian uranium industry, 10:38953 (R;CA)
URANIUM ORES
Activation Analysis
Utilization of epithermal neutrons for the determination of molybdenum in the presence of uranium, 10:39676 (R;BR;In Portuguese)
Delayed Neutron Analysis
Metrological parameters for the delayed neutron method of analysis of geological structures for uranium, 10:39649 (RA;XA)
Metamorphism
Some chemical aspects of the regolithic and hydrothermal alterations associated with the uranium mineralization in the Athabasca basin, Saskatchewan, 10:38819 (RA;CA)
Mineralization
Mineralogical, petrochemical and petrographic-textural studies of ore grade and lower grade radioactive rocks from the Bancroft area, Ontario. Progress report 2, 10:38824 (RA;CA)
Progress report: uranium-phosphorus association in the Helikian Thelon formation and sub-Thelon saprolite, central District of Keewatin, 10:38821 (RA;CA)
Selected mineral associations in radioactive occurences in the Grenville structural province. A progress report, 10:38823 (RA;CA)
Some chemical aspects of the regolithic and hydrothermal alterations associated with the uranium mineralization in the Athabasca basin, Saskatchewan, 10:38819 (RA;CA)
Ore Processing
Decree 3322/1971 of 23 December on the purposes of the National Uranium Enterprise, 10:38829 (R;XA;In Spanish)
Particulates
Lung cancer in uranium miners and the implications of the U/V ratio in uranium-bearing particles, 10:40302 (R;US)
Petrogenesis
Energy losses of nonexciting electrons in dielectric materials, 10:40341 (R;SU;In Russian)
Quantity Ratio
Metrological parameters for the delayed neutron method of analysis of geological structures for uranium, 10:39649 (RA;XA)
Retention
Lung cancer in uranium miners and the implications of the U/V ratio in uranium-bearing particles, 10:40302 (R;US)
Transport Regulations
Radioactive Ores and Concentrates (Packaging and Transport) Regulations 1980 (Northern Territory) No. 30 of 21 July 1980, 10:38957 (R;XA)
URANIUM OXIDES
See also URANIUM DIOXIDE
URANOTHORIANITE
Density
High accuracy measurements of bulk densities of ThO_2 and $(Th, U)O_2$ microspheres by mercury pycnometry, 10:39705 (R;JP;In Japanese)
Dissolution
Dissolution of thorium/uranium mixed oxide in nitric acid-hydrofluoric acid solution, 10:39677 (R;BR;In Portuguese)
URANIUM-ALPHA
Ductility
Effect of hydrostatic pressure on the tensile properties of alpha uranium, 10:39553 (R;GB)
URANOTHORIANITE
Dissolution
Dissolution of thorium/uranium mixed oxide in nitric acid-hydrofluoric acid solution, 10:39677 (R;BR;In Portuguese)
UROGENITAL SYSTEM DISEASES
Disease Incidence
Cadmium inhalation exposure estimates: their significance with respect to kidney and liver cadmium burden, 10:40314 (J;US)
US BUREAU OF MINES
Noise Pollution Abatement
Bureau of Mines occupational noise control program, 10:38772 (RA;US)
Noise Pollution Control
Current status of load-haul-dump machine noise control, 10:38778 (RA;US)
Overview of Bureau of Mines hearing protection research, 10:38781 (RA;US)

Fault modelling and verification methods used for automated failure analysis in Paks NPP, 10:39324 (RA;HU)
In Core Instruments
VERONA - a core monitoring system of WWER-440 reactors, 10:39127 (RA;HU)
On-Line Control Systems
VERONA - a core monitoring system of WWER-440 reactors, 10:39127 (RA;HU)
Reactor Monitoring Systems
VERONA - a core monitoring system of WWER-440 reactors, 10:39127 (RA;HU)

WWER-440 REACTOR
See WWER-3 REACTOR

WWER-5 REACTOR
Reactor Kinetics
Results of investigation of the WWER-1000 neutronics for Novovoronezh-5 NPP, 10:39119 (R;SU;In Russian)

WWER-500 REACTOR
See WWER-5 REACTOR

WWR TYPE REACTORS
See also WWR-S-BUCHAREST REACTOR
WWR-SM ROSSENDORF REACTOR
Fuel Cans
Formation of linear periodical structures of radiation defects in zirconium - 1% niobium alloy under fast neutron irradiation in WWR type reactors, 10:39504 (R;SU;In Russian)

WWR-S-BUCHAREST REACTOR
Poisoning
Study of Xe poisoning effect on fuel displacement strategies in a nuclear electric plant equipped with a natural uranium - heavy water reactor, 10:39144 (R;RO;In Romanian)

WWR-SM ROSSENDORF REACTOR
Computer Codes
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)
Data Acquisition
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)
Data Processing
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)
Disturbances
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)
Real Time Systems
Disturbance analysis system SAAP-2, 10:39227 (RA;HU)

WYOMING
Coal Deposits
Coal mining in Wyoming, 10:38735 (R;US)
Coal Mines
Coal mining in Wyoming, 10:38735 (R;US)
Coal Reserves
Coal mining in Wyoming, 10:38735 (R;US)
Roads
Coal mining in Wyoming, 10:38735 (R;US)

X

X RADIATION
Angular Distribution
Transition radiation and coherent electron-photon scattering, 10:40415 (R;US)
Radiation Detectors
Re-evaluation of the temporal response of CsI photocathodes, 10:40056 (J;US)
Radiation Doses
Comparison of calculations and measurements of the off-axis radiation dose (Si) in liquid nitrogen as a function of radiation length. Master's thesis, 10:40862 (R;US)
XENON
Ion-Atom Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Ion-Molecule Collisions
Data on collisions of helium atoms and ions with atoms and molecules. (2). Cross sections for charge transfer of He^{2+}, He^{+}, He and He^{-} with He, Ne, Ar, Kr and Xe, 10:40453 (R;JP)
Oscillator Strengths
Determination of optical properties by third-harmonic generation in noble gases in unfocused laser beams, 10:40443 (R;US)
XENON 133
Fission Product Release
Carburization of UO_2 kernels in cracked particles and its effect on xenon release, 10:39132 (R;JP)
Radioecological Concentration
Radiological effluent and onsite area monitoring report for the Nevada Test Site, January 1984-December 1984, 10:40136 (R;US)
XENON ISOTOPES
See also XENON 133
Proton Reactions
Complete statistical treatment of heavy target fragmentation in high energy proton nucleus collisions, 10:40808 (RA;FR)
XI PARTICLES
Particle Production
Spin effects in hadron interactions at high energies, 10:40522 (R;SU;In Russian)
Weak Hadronic Decay
Signals of CP nonconservation in hyperon decay, 10:40608 (J;US)
X-RAY DIFFRACTION
Pressure Vessels
Novel instrument for high-pressure research at ultra-high temperatures, 10:40091 (R;US)
X-ray diffraction cell for Debye-Scherrer and Guinier (Huber) cameras at pressure and temperature, 10:40096 (R;US)
X-RAY EMISSION ANALYSIS
See also X-RAY FLUORESCENCE ANALYSIS
Uses
Elemental microanalysis in an analytical electron microscope, 10:39668 (RA;CA)
X-RAY FLUORESCENCE ANALYSIS
X-ray fluorescence analysis, 10:39650 (RA;MX;In Spanish)
X-ray fluorescence spectrometric and optical emission spectographic analysis of thoria in thoriated copper metal powder, 10:39644 (R;IN)
Data Processing
Radionuclide X-ray fluorescence analysis of mineral materials using basic physical parameters, 10:39659 (RA;CS;In Czech)
X-RAY FLUORESCENCE ANALYZERS
On-Line Measurement Systems
Computerized fluorescence analysis system-CFAS, 10:40024 (RA;SU)
Sensitivity
X-ray fluorescence analysis, 10:39650 (RA;MX;In Spanish)
X-RAY RADIOGRAPHY
Czechoslovak system for X-ray and neutron nondestructive testing, 10:39763 (RA;SU)
X-RAY SPECTRA
Transition radiation and coherent electron-photon scattering, 10:40415 (R;US)
Spectra Unfolding
Program for processing spectra of characteristic x-radiation induced by accelerated charged particles, 10:40871 (RA;SU;In Russian)
X-RAY SPECTROMETERS
Background Radiation
Improvement of the instrumental line shape of X-ray spectrometers with Si(Li) - detectors, 10:40047 (R;SU;In Russian)
Calibration
Using results of XL-radiation spectra unfolding during ^{238}Pu and ^{239}Pu decay for efficiency calibration of X-ray spectrometers, 10:39978 (RA;SU;In Russian)
Data Acquisition Systems
Data acquisition and processing system of energy dispersive X-ray spectrometer with microprocessor, 10:40083 (RA;SU)
Data Processing
Data acquisition and processing system of energy dispersive X-ray spectrometer with microprocessor, 10:40083 (RA;SU)
Design
Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy, 10:40994 (J;US)
Fabrication
Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy, 10:40994 (J;US)
Li-Drifted Si Detectors
Improvement of the instrumental line shape of X-ray spectrometers with Si(Li) - detectors, 10:40047 (R;SU;In Russian)
Physical Radiation Effects
Preliminary investigation of changes in x-ray multilayer optics subjected to high radiation flux, 10:40059 (R;US)
Sensitivity
Microchannel-plate intensified crystal spectrometer for use in soft x-ray spectroscopy, 10:40994 (J;US)
X-RAY SPECTROSCOPY
Uses
X-ray absorption spectroscopy (EXAFS), 10:39645 (R;BR;In Portuguese)
XYLANASE
Enzyme Activity
Kinetic characterization of the extracellular xylanases of Thermomonospora sp, 10:40207 (J;US)
XYLANASES
See XYLANASE
XYLANS
Enzymatic Hydrolysis
Kinetic characterization of the extracellular xylanases of Thermomonospora sp, 10:40207 (J;US)

Y

Y-12 PLANT
Nuclear Materials Management
Uranium concentration monitor manual: 2300 system, 10:38959 (R;US)
Y*RESONANCES
See also SIGMA-1385 RESONANCES

YANG-MILLS THEORY
Field Equations
Homogeneous models of Yang-Mills classical fields with external sources, 10:40616 (R;SU)
Gauge Invariance
Classical geometrical interpretation of ghost fields and anomalies in Yang-Mills theory and quantum gravity, 10:40637 (R;US)
Lattice Field Theory
2-d N=1 and 4-d N=2 Yang-Mills SUSY models on the lattice, 10:40621 (R;BR)
Lattice supersymmetry for N=4 Yang-Mills Model, 10:40618 (R;BR)
Supersymmetry
2-d N=1 and 4-d N=2 Yang-Mills SUSY models on the lattice, 10:40621 (R;BR)
Lattice supersymmetry for N=4 Yang-Mills Model, 10:40618 (R;BR)
Symmetry Breaking
Stochastic mechanism of symmetry breaking, 10:40617 (R;SU)
Y*RESONANCES
Investigation of the anti pp → xi (2220) → K/sub s/K/sub s/ reaction at LEAR, 10:40505 (R;US)
YTTERBIUM
Absorption Spectra
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
Phonons
Extended x-ray-absorption fine-structure Einstein frequency and moments of the phonon spectrum: An experimental and theoretical study, 10:39570 (J;US)
Solvent Extraction
Synergistic effect in the solvent extraction of some trivalent lanthanides. 1. Behaviour of the elements La and Yb in the HTTA-TBP, HTTA-HDEHP, HDEHP-TBP systems, 10:39672 (R;BR)
YTTERBIUM 171
Energy-Level Transitions
Excitation of the 5/2$^-$[523] band levels in the ^{171}Lu → ^{171}Yb decay, 10:40760 (RA;SU;In Russian)
YTTERBIUM 172
E0-Transitions
Description of ^{172}Yb properties by means of the interacting boson model, 10:40756 (RA;SU;In Russian)
E2-Transitions
Description of ^{172}Yb properties by means of the interacting boson model, 10:40756 (RA;SU;In Russian)
Rotational States
Description of ^{172}Yb properties by means of the interacting boson model, 10:40756 (RA;SU;In Russian)
YTTERBIUM ALLOYS
Magnetic Properties
Coexistence of ordered magnetism and superconductivity in Pd_2YbSn, 10:39575 (J;US)
YTTERBIUM ISOTOPES
See also YTTERBIUM 171
YTTERBIUM 172
Cluster Model
Clusters with mass numbers 5 <= X <= 16 in atomic nuclei, 10:40716 (RA;SU;In Russian)
YTTRIUM
Activation Analysis
NIMROC reference materials: revised values for thorium, yttrium, lanthanum, and the rare-earth elements, 10:39675 (R;ZA)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS
YUCCA MOUNTAIN
Hydrology
Sensitivity of calculated hydrological flows through multilayered hard rock to computational solution procedures, 10:38930 (R;US)
Mineralogy
Minerals in fractures of the unsaturated zone from drill core USW G-4, Yucca Mountain, Nye County, Nevada, 10:38903 (R;US)
Stratigraphy
Minerals in fractures of the unsaturated zone from drill core USW G-4, Yucca Mountain, Nye County, Nevada, 10:38903 (R;US)
YUGOSLAVIA
Caves
Isotopic study of Karst water. Final report for the period 1 April 1981-31 May 1984, 10:40332 (R;XA)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEA MAYS
See MAIZE
ZEOLITES
Catalytic Effects
Cation promotion effects in zeolite-supported F-T catalysts. Seventh quarterly report, March 1985-May 1985, 10:38981 (R;US)
ZERO POWER REACTORS
See also FCA REACTOR
On-Line Measurement Systems
Electronics systems for experimental reactor physics, 10:39231 (RA;SU)
ZET PINCH
See LONGITUDINAL PINCH
ZINC
Activation Analysis
Use of neutron activation analysis in ascertaining differences in trace element levels in serum and hair of personnel of two car factories, 10:39657 (RA;CS;In Czech)
Biological Effects
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Metabolism
Heavy metals. Biological actions and effects and sources of exposure, 10:40309 (R;DE;In German)
Tissue Distribution
Concentrations of 15 trace elements in some selected adult human tissues and body fluids of clinical interest from several countries: Results from a pilot study for the establishment of reference values, 10:40312 (R;DE)
ZINC COMPOUNDS
See also ZINC OXIDES
ZINC SULFIDES
Crystal Lattices
Analytical electron microscopy study of shock synthesized zinc ferrite, 10:39593 (R;US)
Explosive Forming
Analytical electron microscopy study of shock synthesized zinc ferrite, 10:39593 (R;US)
Magnetic properties of shock-synthesized and furnace-reacted zinc ferrite, 10:39590 (R;US)
Synthesis
Chemical synthesis under shock compression, 10:39559 (R;US)
ZINC OXIDES
Compression
Chemical synthesis under shock compression, 10:39559 (R;US)
ZINC SULFIDES
Activation Analysis
Methodological aspects and development of techniques for neutron activation analysis of microcomponents in materials of geologic origin, 10:39647 (R;AR;In Spanish)
ZIRCALOY 4
Creep
CANSWEL-2: a computer model of the creep deformation of Zircaloy cladding under loss-of-coolant accident conditions, 10:39347 (R;GB)

Crystal Structure
Distribution Function of Crystalline Orientation's usefulness in crystallographic texture analysis, 10:39488 (R;AR;In Spanish)
Fatigue
LCF behaviour of SS AISI 304 in the temperature range between 450 deg. C and 850 deg. C in connection with life time predictions, 10:39540 (RA;XA)
Lifetime
LCF behaviour of SS AISI 304 in the temperature range between 450 deg. C and 850 deg. C in connection with life time predictions, 10:39540 (RA;XA)
Physical Radiation Effects
Analysis of dislocation loops in HVEM irradiated zone refined zirconium and Zircaloy-4 (Electron beams), 10:39518 (RA;CA)

ZIRCONIUM
Crystal Structure
Zone axis pattern maps from zirconium monocrystals, 10:39515 (RA;CA)
Physical Radiation Effects
Analysis of dislocation loops in HVEM irradiated zone refined zirconium and Zircaloy-4 (Electron beams), 10:39518 (RA;CA)
Transmission Electron Microscopy
Zone axis pattern maps from zirconium monocrystals, 10:39515 (RA;CA)

ZIRCONIUM 101
Cluster Model
Clusters with mass numbers 5 <= X <= 16 in atomic nuclei, 10:40716 (RA;SU;In Russian)

ZIRCONIUM 80
Cluster Model
Clusters with mass numbers 5 <= X <= 16 in atomic nuclei, 10:40716 (RA;SU;In Russian)

ZIRCONIUM 90
Giant Resonance
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)
M1-Transitions
Spin-dependent effective NN interaction in niclei and M1 resonance excitation in the (p,p') reaction at E/sub p/ = 201 MeV, 10:40715 (RA;SU;In Russian)

ZIRCONIUM 90 REACTIONS
Heavy Ion Fusion Reactions
Gamma-spectroscopic investigations in the radiative-fusion reaction $^{90}Zr+^{90}Zr$, 10:40730 (R;DE)

ZIRCONIUM 90 TARGET
Proton Reactions
Microscopic analysis of proton elastic scattering in the range 80-200 MeV, 10:40698 (J;US)
Spin excitations in ^{48}Ca and ^{90}Zr with 319 MeV protons, 10:40717 (R;US)
Spin Flip
Spin excitations in ^{48}Ca and ^{90}Zr with 319 MeV protons, 10:40717 (R;US)
Zirconium 90 Reactions
Gamma-spectroscopic investigations in the radiative-fusion reaction $^{90}Zr+^{90}Zr$, 10:40730 (R;DE)

ZIRCONIUM ALLOYS
See also ALLOY-TZM
ZIRCONIUM BASE ALLOYS
Embrittlement
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)
Mass Transfer
Electron nuclear gamma resonance spectroscopy for studying mass transfer in solids, 10:40720 (RA;SU;In Russian)
Sample Preparation
Ion beam thinning of a zirconium alloy for TEM, 10:39514 (RA;CA)
Stress Corrosion
Enbrittlement of the U-7,5 Nb-2,5 Zr uranium alloy in gaseous environments, 10:39484 (R;FR;In French)
Transmission Electron Microscopy
Ion beam thinning of a zirconium alloy for TEM, 10:39514 (RA;CA)

ZIRCONIUM BASE ALLOYS
Order Parameters
Dense random packed model for amorphous $Ni_{33}Zr_{67}$: influence of the heat of mixing, 10:39492 (R;US)
Physical Radiation Effects
Formation of linear periodical structures of radiation defects in zirconium - 1% niobium alloy under fast neutron irradiation in WWR type reactors, 10:39504 (R;SU;In Russian)
Radiation damage in crystalline materials as investigated using ion channeling and transmission electron microscopy, 10:39516 (RA;CA)

ZIRCONIUM HYDRIDES
Phase Studies
Electron microscopy study of factors affecting hydride phases in zirconium, 10:39589 (RA;CA)

ZIRCONIUM ISOTOPES
See also ZIRCONIUM 101
ZIRCONIUM 80
ZIRCONIUM 90
Energy Levels
Low-lying dipole states of spherical nuclei, 10:40736 (RA;SU;In Russian)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-77ET13031	**Illinois Coal Gasification Group, Chicago (USA)**	
	19:38667	DOE/ET/13031—T4-Vol.1
	19:38668	DOE/ET/13031—T4-Vol.3

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00
PAPER COPY		E02	7.50	T02	140.00

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

*U. S. GOVERNMENT PRINTING OFFICE: 1985-544-041/20010

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

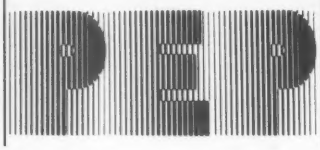
PERSONAL ENERGY PROFILE (PEP)

COMPUTER SEARCH SERVICE



PEP is a customized computer search service provided to DOE and contractor personnel on DOE/RECON (the Department's interactive on-line information retrieval system). For others, these selective dissemination-of-information services are available on commercial on-line systems. PEP automatically supplies the latest information in your field of interest by searching any of the regularly updated data bases in DOE/RECON twice a month, printing out the new bibliographic entries defined by your particular search, and mailing the update to you.

A search strategy is custom designed for each PEP subscriber so that each person's unique information needs are met. Your library and the scientific specialists at the Office of Scientific and Technical Information work with you to design a suitable search. Once the PEP service has been established, the search is automatically executed twice a month, and the results—provided in computer printout form—are mailed to you.

To obtain additional information about the specifics of subscribing to the PEP search service, or for examples of PEP search results, contact the library at your facility. If you do not have a library at your facility, contact
